Narrative Inspection Report

I conducted a routine inspection at the above referenced facility on October 14, 2015. This inspection was conducted to determine the regulatory status and evaluate compliance with the Environmental Protection Act (Act) and Title 35 Illinois Administrative Code, Subtitle G: Land Pollution (Regulations). Jennifer O'Hearn from my office and Dave Bryant, the Site Manager accompanied me during the visit. Seventeen photos were taken of Unit #3. The weather was mostly sunny and dry, with temperatures in the 70s. No violations were found.

Site Inspection

When I arrived at the landfill I checked in at the landfill office. Mr. Bryant was just concluding a meeting and escorted us during our inspection.

Since an ancillary reason for my visit was to conduct solid waste inspection training for Jennifer O'Hearn, we started the inspection at the now closed Unit 1 and Unit 2 landfills, discussing the differences between the older and newer designs. Unit 2 was the location for some new construction related to Unit #3. An 18" gas main had been installed connecting the landfill gas collection system on Unit #3 with the flares and gas-to-energy system located at Unit #2. During my last inspection in late August, the piping had extended under the road on the east side of Unit #3, but had not been completed across the north side of Unit 2 to the intake pipes located near the flare on the west side of the older landfill. The new piping locations are pictured in photos 1, 2, and 8.

The Chemical Waste Unit was open but no trucks were present dumping waste at the time of the inspection. The CWU is currently taking two types of waste, a salt waste from 3M, and coal combustion ash from Archer, Daniels, Midland in Decatur and Ingredion. The floor of the eastern portion of the CWU was now fully covered with ash (photos 4-5). The plastic stormwater covering on the south portion of the ash disposal area had been peeled back as coal ash was placed against the sidewall.

We also looked at the south sedimentation pond. The pond was mostly empty (photo 5).

We then drove to the municipal solid waste unit (MSW) which was very active. The active area was located in area 3B. No banned wastes were noted as we stopped for a time to watch incoming loads (photos 13, 17).

We also looked at the waste solidification unit located on top of Cell 1C. Section V.B of Clinton Landfill's permit authorizes the facility to solidify liquid waste. The waste includes industrial wastes and sludges, as well as leachate generated from the landfill's Municipal Solid Waste (MSW) unit. The liquid waste is discharged into a steel railcar buried in the cover on top of the landfill over previously deposited waste. Bottom ash is stored in a large temporary tent and is added to the liquid waste and mixed with a trackhoe to solidify the material until the resultant mixture passes the paint filter test. The liquid/ash mixture is then placed in the active fill. The unit was active at the beginning of my inspection, but not when we looked at the area. Two photos designated Numbers 11 and 12 were taken of the area. Steam can be seen rising from the mixing tanks.

We then drove the perimeter of the landfill, looking for any errant litter, but found none, despite fairly brisk winds that were prevalent the previous two days.

I visited the scalehouse to look at waste shipment documentation. The facility has received several shipments of asbestos from Millikin in Decatur and the Meridian School District, but several loads from a large abatement project at the White Hall at the old Chanute Air Force Base in Rantoul had also been accepted. The landfill noted the GPS coordinates and elevation of each asbestos load in the logbook.

The gas system was operating normally. The landfill has finished placing gas lines leading from Unit #3 to the gas-to-energy plant located northwest of Unit #2. The flare at Unit #3 was handling all the gas generated at the site. When the permit is granted to allow the use of the newly installed pipe to the gas-to-energy plant, the plant should be able to handle the gas generated by unit 3. The flares can be used as back-up in case the energy plant is down for maintenance.

Leachate from Unit #3 is collected from the leachate collection system and is pumped into a 30,000 gallon, double-walled underground tank north of Unit #3. Leachate from the MSW unit is either hauled to the Bloomington-Normal Water Reclamation District or solidified on-site. The facility has recently submitted a permit to recirculate leachate through four more vertical wells/sumps, increasing the total of sumps to six. Thus far 1.3 million gallons of leachate from the municipal solid waste unit (MSW) has been solidified with ash and disposed of on-site. Another 1.448 million gallons have been trucked off-site to the Bloomington Treatment Plant. A total of 485,000 gallons of leachate from the CWU have been hauled off-site for treatment.

Permitting

The facility is operating under permit 2005-070-LF, which expires on February 15, 2017. The permit renewal application was granted in Modification 29 on July 7, 2012. The permit includes a 157.451 acre waste disposal area with a gross airspace of 32,014,225 cubic yards. At current waste disposal rates, the space is estimated to last 45 years.

Modification 55 issued on July 13, 2015 approved the alternate source demonstration for 4th quarter 2014 groundwater monitoring exceedences and new AGQS values to reflect additional parameters required by 35 IAC 620 and Condition VIII.25 of the permit.

Modification 56, issued on October 13, 2015 approved; 1) the use of the newly installed leachate recirculation sumps. 2) removed PCBs and aroclors from the monthly leachate monitoring at the CWU [note: since the facility has agreed not to take any PCBs in the future, and has not taken any in the past, this requirement was dropped from the permit], 3) the disposal of leachate from the CWU at any permitted treatment facility [again, since PCBs will not be accepted, the need for special treatment is no longer valid], and 4) changes to the groundwater monitoring program.

The estimate for closure of the current landfill's 39.8 acres of municipal solid waste disposal and 6.14 acres comprising the CWU is \$11,392,687. This value includes \$5,552,722 for premature closure, and \$5,839,905 for post-closure care.

Summary of Apparent Violations

No violations were noted during the inspection
