Re: LPC#0390055036—DeWitt County
Clinton/Clinton Landfill #3
Compliance File

Dear Mr. Welk:

On June 3, 2015 an inspection of the above referenced site was conducted by Dustin Burger representing the Illinois Environmental Protection Agency. The purpose of this inspection was to determine the site's compliance with the Illinois Environmental Protection Act and 35 Illinois Administrative Code G regulations.

While no violations were noted at the time of this inspection.

For your information, a copy of the inspection report is enclosed. Please contact Dustin Burger at (217) 278-5800 if you have any questions regarding this inspection.

Sincerely,

John P. Richardson, Acting Manager
Field Operations Section
Bureau of Land

Enclosure

June 3, 2015 Inspection
Inspector: Dustin Burger
GIS Information from BOL Inventory: N40.11507 W-88.9589

Narrative Inspection Report

I conducted a routine inspection at the above referenced facility on June 3, 2015. This inspection was conducted to determine the regulatory status and evaluate compliance with the Environmental Protection Act (Act) and Title 35 Illinois Administrative Code, Subtitle G: Land Pollution (Regulations). Dave Bryant, the Site Manager accompanied me during the visit. Six (6) photos were taken of Unit #3. The weather was mostly cloudy and dry, with temperatures in the 70s.

Site Inspection

When I arrived at the landfill I checked in at the landfill office. Mr. Bryant was in a phone conference, but excused himself to accompany me on the inspection. We first looked at the now closed Units #1 and #2 before starting at the Chemical Waste Unit (CWU) at Unit #3.

The CWU was open but no trucks were present dumping waste at the time of the inspection. The CWU is currently taking two types of waste, a salt waste from 3M mentioned in previous inspections and coal combustion ash from Archer, Daniels, Midland in Decatur. The floor of the eastern portion of the CWU was now fully covered with ash (see photos 1-2).

We also looked at the south sedimentation pond. The pond was partially full, and had plenty of freeboard. Bryant said that water had been sampled and discharged approximately two weeks before.

We then drove to the municipal solid waste unit (MSW) which was very active. The active area was located in the newly permitted Sections 3C and 5B. Approximately half of the floor of the new cells, primarily in Section 3C, had been covered with the first lift of waste. The first lift of waste across the floor of the cell consists of ten feet of uncompacted waste. Trucks drive on the deposited waste and dump their loads near the edge. Heavy equipment then pushes the waste over the edge and onto the floor of the cell to create the first lift. With this method the heavy equipment never drives on the engineered liner and eliminates the possibility of damaging the liner with the bulldozers or compactors.

We also looked at the waste solidification unit located on top of Cell 1C (photo 3). Section V.B of Clinton Landfill's permit authorizes the facility to solidify liquid waste. The waste includes industrial wastes and sludges, as well as leachate generated from the landfill's Municipal Solid Waste (MSW) unit. The liquid waste is discharged into a steel railcar buried in the cover on top of the landfill over previously deposited waste. Bottom ash is stored in a large temporary tent and is added to the liquid waste and mixed with a trackhoe to solidify the material until the resultant mixture passes the paint filter test. The liquid/ash mixture is then placed in the active fill. The unit was not active during the inspection, but was in use earlier to solidify leachate.

We then drove the perimeter of the landfill, looking for any errant litter. During my previous inspection I had noted litter along the eastern treeline. The plastic bags previously noted had been removed and the area was clean.

We then visited the scalehouse to look at waste shipment documentation. No new special wastes had been accepted since my last inspection, so I did not check any waste profile documents during this visit. The largest generator of special wastes is still a manufactured gas plant project from Dixon, Illinois. The waste is not actually MGP waste, but consists of stormwater from the excavation. Waste profile analysis did not detect any organic constituents of concern, but the water would fail discharge limits because of suspended solids.

The gas system was operating normally. The landfill has placed gas lines from Unit #3 to the gas-to-energy plant located northwest of Unit #2. The gas-to-energy plant was running and was handling all the gas generated at the site. The facility has flares installed that handle any gas generated should the energy plant shut down.

Leachate from Unit #3 is collected from the leachate collection system and is pumped into a 20,000 gallon, double-walled underground tank north of Unit #3. Leachate from the MSW unit is either hauled to the Bloomington-Normal Water Reclamation District or solidified on-site. The facility has recently submitted a permit to recirculate leachate through two vertical wells/sumps.

Bryant said they had been hauling large amounts of leachate lately. The increase is related to the opening of the new cells. The new cells have an area of seven acres. Once waste is placed into the cell, all precipitation that falls into the cell is considered leachate. A wet spring means that thousands of gallons of leachate are generated from each rain event. The leachate is pumped out quickly, leaving the floor of the cell dry.

Permitting

The facility is operating under permit 2005-070-LF, which expires on February 15, 2017. The permit renewal application was granted in Modification 29 on July 7, 2012. The permit includes a 157.451 acre waste disposal area with a gross airspace of 32,014,225 cubic yards. At current waste disposal rates, the space is estimated to last 45 years.

Permit Modification 51 was issued on February 27, 2015. This modification allows the use of auto shredder waste for daily cover.

Modification 52 was issued on April 10, 2015. This modification approved 1) the use of Unit #3 gas at the gas-to-energy plant, 2) revisions to the gas well field and gas headers, and 3) approves the operation of newly constructed cells 3C and 5B consisting of 7 acres, 4) revised the closure-post closure cost estimates to reflect the opening of the new cells.

Modification 53; issued on April 16, 2015 approved the alternate source demonstration for 2nd quarter groundwater monitoring exceedences and new AGQS values to reflect additional parameters required by 35 IAC 620 and Condition VIII.25 of the permit.

The estimate for closure of the current landfill's 39.8 acres of municipal solid waste disposal and 6.14 acres comprising the CWU is \$11,746,868. This value includes \$5,462,480 for premature closure, and \$6,284,388 for post-closure care.

Summary of Apparent Violations

No violations were noted during the inspection

¹ A typographical error in the February 19, 2015 initial notification letter mislabeled this parameter as dissolved nitrate.

As discussed in the initial notification letter, three apparent parameter exceedances which were identified in the 4th quarter 2014 were observed at concentrations that were generally consistent with or lower than concentrations which were previously identified and confirmed as exceedances. The 4th quarter 2014 exceeding parameters listed in Table 2 were previously addressed in significant permit modification applications (Log Nos. 2014-491 and 2015-025) which demonstrated that parameter exceedances observed during the 2nd quarter 2014 and 3rd quarter 2014 sampling events, respectively, were not attributable to a release from the Facility. These applications are currently under review. As these parameters had been previously confirmed as exceedances and addressed in applications that were pending at the time the initial notification letter was submitted, no additional sampling was conducted for the parameters listed in Table 2 (as indicated in Table 1 of the initial notification letter).

Additionally, Table 2 lists some parameters for which confirmed exceedances were addressed in previously approved applications, but for which new intrawell AGQS values are yet to be approved. The new intrawell AGQS values were submitted as an addendum to Application Log No. 2015-025. Pending approval of these values, these parameters will not be addressed in any additional applications.

Resample results did not confirm the remaining apparent exceedances, as summarized in the attached Table 1. Therefore, CLI will continue routine detection monitoring for those parameters.

Please contact the undersigned if you have any questions or need additional information.

Sincerely,
PDC Technical Services, Inc.

**RE: 0390055036--DeWitt County
Clinton Landfill No. 3
Permit No. 2005-070-LF
Modification No. 50
Section VIII. Groundwater Monitoring
Special Condition 14**

Dear Sir or Madam:

On behalf of Clinton Landfill, Inc. (CLI), PDC Technical Services, Inc. (PDC) is submitting the results of the confirmation procedures (resamples) for the January 15, 2015 reporting period at the Clinton Landfill No. 3 (Facility), in accordance with the above-referenced permit condition. CLI notified the Agency of the initial 4th quarter 2014 exceedances and intent to conduct confirmation sampling for selected parameters in a correspondence dated February 19, 2015 (initial notification letter). Table 1 is attached to summarize the confirmation sampling results.

As summarized in Table 1, resample results confirmed a number of apparent exceedances. Pursuant to Special Condition VIII.15 of the Facility permit, CLI will submit a significant permit modification application in order to demonstrate that these confirmed exceedances from the 4th quarter 2014 are attributable to a source other than the Facility.

As also discussed in the initial notification letter, PDC Laboratories, Inc. (PDC Labs) is currently investigating potential alternate sources of dissolved nitrate in the groundwater samples, which may include sampling and/or laboratory artifacts. Therefore, CLI followed the confirmation procedures of 35 IAC 811.319(a)(4)(B) for all 4th quarter 2014 apparent exceedances of dissolved nitrate, although we note that the initial dissolved nitrate results for many wells were consistent with dissolved nitrate levels that had previously been demonstrated to not be attributed to the Facility in recently approved applications and/or pending applications Log No. 2014-491 and Log No. 2015-025. CLI will also further address any confirmed dissolved nitrate exceedances (as listed in Table 1) in the significant modification that will be submitted to address 4th quarter 2014 exceedances.

SOLID WASTE LANDFILL GROUNDWATER, LEACHATE, FACILITY AND GAS REPORTING FORM

This form must be used as a cover for the following list of notices and reports required to be submitted to the Illinois EPA's Bureau of Land, Permit Section. This form must be used for Solid Waste facilities only. Reporting for Hazardous Waste facilities should be submitted on a separate form. All reports submitted to the Illinois EPA's Bureau of Land Permit Section must contain an original, plus a minimum of two copies.

Note: This form is not to be used with permit applications. The facility's approved permit will state whether the document you are submitting is required as a report or an application.

Facility Name: Clinton Landfill No. 3 Site ID #: 0390055036
Facility Address: 9550 Heritage Rd, Clinton, IL 61727

Check the appropriate heading. Only one heading may be checked for each corresponding submittal. Check the appropriate sub-heading, where applicable. Attach the original and all copies behind this form.
