

Annual Groundwater and Drinking Water Program Review

Calendar Year 2021

Illinois Environmental Protection Agency

**Annual Groundwater and Drinking Water Program
Review
Calendar Year 2021**

**Illinois Environmental Protection Agency
Bureau of Water
Division of Public Water Supplies**

Annual Compliance Report for 2021

Introduction

Each year, the Illinois Environmental Protection Agency (Illinois EPA) provides citizens and the United States Environmental Protection Agency (U.S. EPA) with a report on the status of public drinking water in Illinois. This report provides both an assessment of how well public water supply systems are doing at meeting the standards set in the federal Safe Drinking Water Act and insights about current challenges faced by public water suppliers.

Ongoing attention, investment, and response to new and ongoing challenges to our water resources is needed to maintain the ability to rely on an adequate supply of safe water. Sustainable water resources are critical to personal and public health. Protecting water sources, treating the water, and testing the water after it is treated as part of the multi-barrier approach to assuring an adequate supply of water that is safe to drink.

As we issue this report, we are still dealing with the coronavirus disease 2019 (COVID-19). Our priority has been working with public water suppliers to keep them up and running as well as in compliance with the Safe Drinking Water Act while keeping our employees and others safe.

Though the pandemic necessitated changes, the Drinking Water Protection (DWP) program at Illinois EPA sustained its work to keep drinking water safe for everyone. Protecting and supplying safe water depends on many organizations and individuals. While the Illinois EPA administers and enforces the provisions of the federal Safe Drinking Water Act on behalf of the EPA, we rely on our partners in areas ranging from government to industry to non-profit organizations to take an active role and contribute in this quest. These partners include everyone, including individual citizens. Everyone plays a part in ensuring safe water. As always, our aim with this report is to provide a clear picture of what is done to protect the quality of their drinking water and the success of the efforts to do so.

In Illinois, regulatory oversight of public water systems (PWS)¹ is shared by the Illinois EPA and Illinois Department of Public Health (IDPH). The Illinois EPA was designated as Illinois' primary enforcement authority by the U.S. EPA on August 29, 1979. The Illinois EPA, through an Intergovernmental Funding Agreement has empowered the IDPH to administer the Non-Community PWS Program while the Illinois EPA retains regulatory authority over Community Water Systems (CWS)².

1 PWS serve 15 service connections or 25 residents.

2 CWS serve 15 or more year-round service connections or 25 or more year-round residents.

The Illinois EPA regulates 1,757 active Community Water Systems CWS's. There were 4 new CWS's Meadow Brook Mobile Home Community Oak Grove Village, Acorn Acres Mobile Home Park and Cahokia Heights resulting from a merger of Commonfields of Cahokia and Cahokia. These CWS's utilize groundwater and surface water sources of potable water. Currently, 1,127 CWS's use groundwater sources, 613 use surface water sources or groundwater sources under the direct influence of surface water,

12 use both ground and surface water sources, and 740 supplies purchase water from other CWS's. A total of 12,405,102 persons are served by those systems; 39 percent of that population is directly served from surface water systems. Thirty five percent of the population is served by purchased surface water, two percent by purchased groundwater, and 24 percent by groundwater systems. It is worth noting that although only 26 percent of the population is served by groundwater (including purchased groundwater), groundwater dependent systems comprise almost 65 percent of the total number of CWS's.

The Transient Non-Community (TNC) PWS served a population of 310,918 in 2021, while Non-Transient Non-Community (NTNC) PWS served a population of 161,750. A total of 405,333 persons are served by systems using groundwater, while only 67,335 persons are served by surface water. These numbers reflect the areas where Non-Community Public Water Systems (NCPWS) are located predominantly in rural or non-incorporated areas where groundwater is generally available as a source of potable water.

Statutory Background

The program to protect PWS in Illinois began in 1915 and has undergone considerable legal and regulatory restructuring over the years. In 1970, the General Assembly formulated the Illinois Environmental Protection Act (Act), 415 ILCS 5/14. They found that "state supervision of public water supplies is necessary in order to protect the public from disease and to assure an adequate source of pure water for all beneficial uses," and "it is the purpose of this Title to assure adequate protection of public water supplies." The Illinois Groundwater Protection Act (IGPA), 415 ILCS 55/1 was also adopted in 1987. Additionally, programs to protect groundwater were initiated by the Act in conjunction with "Water Quality Standards" for waters of the state that included underground water (35 Ill. Adm. Code 302). In 1991, the Illinois Pollution Control Board (IPCB) adopted comprehensive groundwater quality rules (35 Ill. Adm. Code 620).

The “core mission” of the Illinois EPA’s Division of Public Water Supplies (DPWS) is to *assure that all persons served by community public water supplies receive water, which is safe in quality, clean, adequate in quantity and of satisfactory mineral character for ordinary domestic consumption*. To accomplish this goal, the DPWS oversees the design, construction, and operation of CWS’s in Illinois. More specifically, the Illinois EPA must review the safety and protection of drinking water source water, implement a permitting program for the design, construction, and operation of CWS treatment facilities, and maintain a surveillance program of water systems’ untreated and treated waters.

To support these activities, the DPWS has been staffed by a diverse contingent of engineers, geologists and scientists that comprise the Compliance Assurance (CAS), Field Operations (FOS), Groundwater (GWS), and Permit (PS) Sections. The DPWS is further supported by the Infrastructure and Financial Assistance Section (IFAS) of the Bureau of Water (BOW), the Division of Legal Counsel, the Division of Laboratories, the State of Illinois’ Central Management Services (CMS) and Department of Innovation and Technology (DoIT).

As mentioned previously, the IDPH supports the NCPWS program through a series of rules including, but not limited to the Illinois Plumbing Code (77 Ill. Adm. Code 890); the Illinois Water Well Construction Code (415 ILCS 30); the Surface Source Water Treatment Code (77 Ill. Adm. Code 930); and the Drinking Water Systems Code (77 Ill. Adm. Code 900). The IDPH’s Division of Environmental Health works to reduce the incidence of disease and injury related to environmental factors that fall within five major areas of responsibility: rulemaking; plan reviews and construction permits; inspections; vocational and facility licensing; and engineering and toxicological reports.

To support these areas of responsibility within the NCPWS, IDPH has field staff located in the IDPH’s six Regional Offices (RO) and leverages the resources of Local Health Departments (LHD). Compliance assurance and engineering services are generally conducted by staff located in the Central Office in Springfield. Consistent with the requirements of the Safe Drinking Water Act (SDWA) program activities include sanitary surveys, water analysis and reporting; plan review; technical assistance; and training and education.

Under the SDWA and subsequent amendments, the U.S. EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs). For some regulations, treatment techniques (TT) are established in lieu of an MCL to control unacceptable levels of contaminants in water. The SDWA also requires PWS to notify their consumers when they have violated these regulations. The consumer notifications must provide an understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of using alternative water supplies during the violation.

Through the ongoing review of Illinois EPA’s programs, the U.S. EPA has granted the Illinois EPA primary enforcement authority to determine the frequency that CWS monitor and report on the contaminants present in their water. Generally, the larger the population served by a water system, larger the number of samples collected and the more frequent the monitoring and reporting (M&R) requirements. Additionally, the U.S. EPA supports the development of new MCLs by requiring CWS to monitor and report on currently unregulated contaminants (e.g., Unregulated Contaminant

Monitoring Regulation (UCMR)). As data are acquired for these contaminants, scientific analyses are conducted to determine the need for development of new MCLs.

In 1998, the Illinois EPA began making CWS revolving loans through a partnership with the U.S. EPA and the Federal Government. Since this time, the Illinois EPA has made more than \$2.3 billion in revolving loans to water systems. This money has gone to public water supply systems around the state to maintain compliance with federal and state laws and regulations and maintain and improve the state's drinking water infrastructure.

OVERVIEW OF THE PWS PROGRAMS IN ILLINOIS

Community Public Water Supply Surveillance Program

To sustain compliance with regulatory requirements and ensure the safety of Illinois CWS consumers, the Illinois EPA is committed to completing engineering evaluations (sanitary surveys) as frequently as possible. Through the DPWS' institutional knowledge, the more frequent the contact between the Illinois EPA and CWS, the higher the percentage of compliant water systems.

The focus of the Illinois EPA's inspections of CWS continues to be an evaluation of the general operation and maintenance practices at the respective systems. Inspectors evaluate CWS's under board rules, and various ancillary programs that affect the CWS, such as the regulations under the Title IV: Drinking Water Security and Safety of the *Public Health Security & Bioterrorism Preparedness & Response Act of 2002* (Public Act 107-188, June 12, 2002). Fundamental aspects of these inspections also revolve around the provision of technical assistance, identification of significant deficiencies and necessary corrective actions to ensure the safety of drinking water supplies. The engineering evaluations include an on-site review of the eight components of the sanitary survey, including source, treatment, distribution system, finished water storage, pumps, monitoring & reporting, management & operation, and operator compliance assessments. The DPWS conducts surveillance and inspections at CWS from six regional offices located in Rockford, Elgin, Champaign, Springfield, Collinsville, and Marion.

Field Operations Section (FOS)	
Steve Vance, Manager (Retired 12/22)	
Champaign Regional Office	Springfield Regional Office
Vacant, Manager	John Bartolomucci, EPS IV
Matt Talbert, P.E, EPE IV	Michael Dragovich, EPE III
Shane McCully, EPE III	Jamie Cowles, EPE III
Rockford Regional Office	Collinsville Regional Office
Vacant, Manager	Gayle Renth, Manager
Joy Bliton, EPE III (Retired 12/22)	James Blessman, EPE III
Andrew Holloway, EPE II	Regan Taylor, EPE III
Fei Zaho, EPE I	
Elgin Regional Office	Marion Regional Office
Segundo Nallatan, P.E., Manager	Vacant, Manager
Dwayne Booker, EPE III	John Kinder, EPE III
Grover Hopkins, EPE III	Chris Johnston, EPE III
Dharmishtha Patel, EPE III	
Shibu Vazha, EPE III	
Gopi Ramanathan, EPE III -	
Marlene Diamond (Admin. Support)	

With assistance of national stakeholder groups, the U.S. EPA has established that over the next two-year reporting cycle, state primary enforcement programs should complete sanitary surveys at

a minimum of 79.5 percent of the CWS in their state on a 3-year frequency. In 2021 the Illinois EPA conducted 451 sanitary surveys. For the reporting period (2019-2021), the Illinois EPA has conducted sanitary surveys at approximately 79.7 percent (1,396 of 1,750) of the CWS under its regulatory authority.

Non-Community Public Water Supply Surveillance Program

The NCPWS surveillance Program shares many commonalities with the CWS surveillance activities. Sanitary surveys are intended to review the adequacy of the water system’s source of water, facilities, equipment, operation, and maintenance to ensure the production and distribution of safe drinking water. Sanitary surveys for NCPWS are intended to identify and correct significant deficiencies and are conducted once every two years by the IDPH or LHD field staff. IDPH Field Offices are located in Rockford, Peoria, Champaign, Marion, Edwardsville, and West Chicago. There are 93 LHDs throughout the State that help conduct NCPWS surveillance and perform sanitary surveys. IDPH regional office staff and LHD staff that perform sanitary surveys generally work in several Public Health Surveillance Programs and many times conduct multiple program inspections while visiting a NCPWS. IDPH Policy sets a goal for completing sanitary surveys once every two years. For the 2021 calendar year timeframe, the IDPH has conducted sanitary surveys at approximately 97.37 percent of the NTNCPWS and 99.31% of the TNCPWS under its regulatory authority.

Community Public Water Supply Compliance Assurance Program

To ensure Illinois CWS are in compliance with state and federal statutes and regulations, the IPCB adopts identical in substance regulatory provisions from the U.S. EPA, per Section 5/7.2 of the Act. Ensuring that CWS are in compliance with these regulations, which include MCLs in drinking water, is substantially the core mission of the Compliance Assurance Section (CAS). Additionally, CAS coordinates technical outreach to water systems to assure proactive compliance measures are taken ahead of formal enforcement. The DPWS conducts compliance efforts for CWS from the Central Office in Springfield.

Compliance Assurance Section
Mary Reed, Manager
Andrea Rhodes, EPS IV
Jay Timm, EPS IV
Alexandra Miranda, EPS II
David Saladino, EPS III
Katherine Andring EPS III
Adam Nutt, EPS I
Sara Parmenter, LSCT
Mandy Trader, LSCT

Non-Community Public Water Supply Compliance Assurance Program

Similar to the CWS compliance program, the IDPH tracks water system compliance with state and federal statutes and regulations. All NCPWS are tested at least annually for total coliform bacteria and nitrate. NTNC PWS are also tested for contaminants, such as pesticides, solvents, lead and copper, arsenic, metals, and disinfection byproducts. Responsibility for tracking water system compliance is shared by Regional and Central Office staff. Data tracking activities are conducted by Central Office Staff.

IDPH Non-Community Water Supply Program
Environmental Health Services Section Chief, Vacant
Eric Portz, P.E., Safe Drinking Water Program Manager - Non-Community Water Supplies
Jamie Tosetti, Environmental Health Specialist III
Jennifer Krick, Environmental Health Specialist II
Benjamin Koester, Environmental Health Specialist I
Maria Crain, Administrative Assistant

Community Public Water Supply Operator Certification Program

The Illinois Public Water Supply Operations Act (415 ILCS 45/) establishes the statutory basis for the community water supply operator certification program in Illinois. This statute further establishes a reliable mechanism for Illinois EPA communications with CWS, ensuring that Responsible Operators in Charge (ROINC) supervise the portions of the CWS for which they are accountable, and requiring the timely submittal of information that the Illinois EPA relies upon to protect drinking water quality. Finally, this statute provides the basis for the regulatory requirements found in 35 Ill. Adm. Code Part 681. The most recent amendments to this Part became effective in 2017. The 2017 revisions to the regulation focused on further defining the experience requirements to become a licensed water supply operator in Illinois.

The Illinois EPA would also like to make note of our training partners. The operator training opportunities provided by the Environmental Resources Training Center at Southern Illinois University-Edwardsville, the Illinois Potable Water Supply Operators Association, Illinois Rural Water Association, Illinois Section of the American Water Works Association, and two-year colleges are a big factor in the successful treatment of potable water in Illinois. Whether large conferences, webinars, semester long classes, regional forums, or water system specific curricula these educators, associations and individuals have afforded opportunities to water professionals in Illinois that is unparalleled across the country.

The Illinois EPA's CWS Operator Certification Program is administered by the CAS of the DPWS. The Illinois EPA estimates that this program requires approximately two full time staff. The Operator Certification Program is coordinated by a staff member from the CAS of the DPWS:

Operator Certification Unit
Tatum DeMay, Operator Certification Coordinator EPS IV
Katherine Andring, EPS III
Adam Nutt, EPS I

Non-Community Public Water Supply Operator Certification Program

The IDPH NCPWS program administers a program to properly credential NTNC PWS from the Central Office in Springfield. The IDPH uses the services of the Water Quality Association to conduct initial Operator Certification Training and administer, certification examinations. The following IDPH Environmental Health Services staff is actively involved in the administration of the program:

Personnel
Eric Portz, Safe Drinking Water Program Manager
Maria Crain, Administrative Assistant

Community Public Water Supply Capacity Development Program

The 1996 SDWA required all states to develop and implement a new system program and existing system strategy for capacity development. Subsequently, Illinois had to ensure that all new CWSs and all new NTNC public water supply systems commencing operation after October 1, 1999, had adequate technical, managerial, and financial (TMF) capacity before commencing operation. Illinois adopted regulations to implement this requirement which can be found in Title 35 of the Ill. Adm. Code Part 652 and Title 77 of the Ill. Adm. Code Part 900. Illinois also had to develop and implement a strategy to help all existing CWS and NTNC public water supply systems achieve and maintain TMF capacity beginning October 1, 2000. Illinois submitted a Capacity Development Strategy for existing public water supplies in July 2000 to the U.S. EPA and the strategy was approved by the U.S. EPA on September 27, 2000. In Illinois, the Illinois EPA regulates CWS systems IDPH regulates NTNC public water supply systems.

It is difficult to estimate the full-time equivalents devoted to this program as it is integrated into all aspects of the drinking water program. In several recent U.S. EPA evaluations of the Illinois Capacity Development Program, U.S. EPA has expressed concerns that this program is understaffed. The Capacity Development program is now coordinated by a staff member from the Permit Section of the DPWS:

Personnel
Jenny Larsen, Capacity Development Coordinator

Non-Community Public Water Supply Capacity Development Program

The Safe Drinking Water Program Manager coordinates Capacity Development Program activities at IDPH. Currently, the Program Manager reviews new NTNC Public Water System Construction Permit Applications and performs capacity reviews on these new systems. When capacity reviews are needed at existing NTNC Public Water Systems, the Program Manager coordinates the reviews with water system personnel and RO/LHD field staff.

Cross-Connection Control Program

The Cross-Connection Control Program in Illinois is one of several tools intended to protect water consumers in the state. Statutes in Illinois establish that no person can threaten a water supply and water supply officials are responsible for protecting their water mains from connections that have the potential to allow the backflow of contaminants into their respective distribution systems (a cross-connection). Regulations have been adopted to outline what comprises a viable Cross-Connection Control Program.

Water supplies in Illinois have significant partners in the implementation of their Cross-Connection Control Program. While it is up to the Illinois EPA to ensure that CWS have viable programs through physical inspection of water treatment facilities and documentation reviews, the IDPH deals with the plumbing aspects of the program.

The Environmental Resources Training Center located at Southern Illinois University-Edwardsville provides for the training of licensed plumbers who wish to become certified Cross-Connection Control Device Inspectors (CCCDI). While any Illinois licensed plumber can inspect plumbing, or install a backflow device or assembly, only an Illinois CCCDI can test that device or assembly. Additionally, the Illinois EPA relies upon the Environmental Resources Training Center to track and properly credential CCCDIs. It is difficult to estimate the full-time equivalents devoted to this program as it is integrated into all aspects of the DPWS's programs.

Groundwater and Source Water Protection Program

The Groundwater and Source Water Protection Program in Illinois is framed by Public Acts 83-1268 and 85-063, and the SDWA Section 1453. These laws amended the Act, and created the Illinois Groundwater Protection Act (IGPA) 415 ILCS 55/1, and led to the development of IPCB regulations for groundwater quality standards and protection requirements. Further, the IGPA requires stakeholder input from the ICCG and Groundwater Advisory Council (GAC) on the development of groundwater protection programs, laws, and policies. The Act was amended to require the development and implementation of a "priority" Regional Groundwater Protection Planning Program comprised of local stakeholders. In addition, the IGPA requires the ICCG to undertake a comprehensive evaluation of progress being made under these laws with biennial reporting to the Governor and General Assembly. See the IGPA Biennial Report; https://www2.illinois.gov/epa/topics/water-quality/groundwater/wellhead-protection/Documents/2020_01_07_Final_IGPA_Report.pdf. In August of 2019, Part 604 of the Board regulations required each CWS system that treats surface or groundwater as a primary or emergency supply of water to develop source water protection plans that must be approved by the

Illinois EPA. The DPWS source water protection initiatives are generally managed from the Central Office in Springfield and the Rockford Office by the GWS of the DPWS.

Groundwater Section	
Mike Summers, P.G., Manager, Groundwater Section	
Source Water Protection Unit	Hydrogeology and Compliance Unit
Anthony Dulka, P.G., Manager	Vacant , Manager
Greg White, P.G., EPS III (Rockford Office)	Lynn Dunaway, P.G., Lead Geologist, EPS IV
Ryan Bennett, EPG III	Amy Zimmer, EPG III
Alan Fuhrman, EPG III	Melinda Shaw, P.G., EPG I
Keri Beckham, EPG II	Lauren Martin, EPG I
Karen Bridges, EPG I	

Permitting Program

Correct construction and operation of a PWS is essential for providing a safe and adequate supply of drinking water. The DPWS conducts all permitting functions for CWS from the Central Office in Springfield.

Permit Section	
David Cook, P.E., Manager	
Jenny Larson, P.E., EPE IV (Des Plaines) - Capacity Development Coordinator	
Vacant , EPE IV Lead Engineer	Vacant , EPE IV Lead Engineer
Kent Cook, P.G., GIS II	Chris Kohrman, EPE III
Todd Lamm, EPE I	Gerard Zimmer, EPE III
Cody Bauer, EPE II	Interviewing EPE I
Eric Markhardt, EPE I	Proposed 2nd - EPE I

The Safe Drinking Water Program Manager conducts all permitting functions for NTNCWS from the Central Office in Springfield.

Personnel
Eric Portz, Safe Drinking Water Program Manager

Public Water Supply Loan Program

The Public Water Supply Loan Program (PWSLP) is administered by the Illinois EPA's BOW-Infrastructure Financial Assistance Section (IFAS). IFAS also administers the Water Pollution Control Loan Program. IFAS manages all aspects of the funding process with input from the DPWS. Detailed program information is available on the Illinois EPA web site at <https://www2.illinois.gov/epa/topics/grants-loans/state-revolving-fund/Pages/default.aspx> .

Generally, the first step toward the Illinois EPA working with an applicant to fund a project is the submittal of a planning report, called a "Project Plan" in Illinois' Administrative Loan Rules. An applicant must also complete a Project Planning Submittal Checklist which identifies the location of other necessary information for application processing. Once a scope of work is identified in a "Project Plan," IFAS staff will distribute the planning report to the Permit Section and Field Operation Section for review and approval. The CAS is also consulted to ensure funding is provided to address the loan applicant's most pressing needs. Once comments from each of these Sections are received, IFAS sends a review letter requesting any additional information that is needed or answers to any questions the Illinois EPA may have. IFAS then produces a Project Summary document and the loan applicant will be required to either hold a public hearing (if the potential for environmental issues exists or if financial impacts to the loan applicant's residents are significant), or simply place an ad in the local newspaper announcing the proposed project and request for funding. The public hearing, or placement of an ad in the local newspaper, is followed by a 10-day public comment period allowing for the submission of written comments concerning the proposed project. Once the public comment period is over and IFAS receives proof of the public notification in the newspaper and any responses to any public comments, the Illinois EPA will issue Planning Approval. Planning Approval is good for five years. Therefore, once a scope of work has been identified and approved, the loan applicant can pursue funding for any portion(s) of that scope within the following five years.

The Illinois EPA's revolving loan funding process is unlike that of a bank in the respect that the Illinois EPA does not offer the funding agreement until after the recipient has demonstrated a definitive need for the project, obtained Illinois EPA Planning Approval, obtained all necessary permits, demonstrated the means and ability to repay the funding, adopted all necessary

The U.S. EPA has determined that lead service line replacement is an eligible loan expense. Following a legislative amendment, the Illinois EPA processed its first lead service line replacement project in 2017.

ordinances to do so and then gone out to bid on the project. Once a "winning/low" bidder is identified, the Illinois EPA can issue the Loan Agreement followed by the loan applicant entering into the contract for construction of the project. The Illinois EPA can fund the construction costs as well as planning efforts, design engineering and construction engineering/oversight. As of July 1, 2017, loan applicants can qualify for reduced interest rates (Small Community Rate and/or Hardship Rate) based upon their service population, median household income, unemployment rate and population trends. Loan applicants qualifying for the Small Community Rate or Hardship Rate also have the option of extending the term of their loan beyond the traditional 20 years, up to a maximum of 30 years, provided the term of the loan does not exceed the useful life of the funded project. Details on the fixed loan rate of a loan agreement and repayment periods can be found within 35 Ill. Adm. Code Part 662.

Laboratory Certification

Illinois continued to provide a laboratory certification program for all regulated contaminants, to certify commercial and municipal laboratories within the State. A remote assessment of Illinois EPA's laboratory was conducted on October 26 – November 3, 2021, and an audit report was sent to the state on May 5, 2022. Illinois EPA submitted responses to the report on June 17, 2022. Interim Certification will be granted after all responses are accepted, which is effective until a final certification decision is issued and is contingent upon the laboratory's continued demonstration of acceptable performance through the analysis of annual proficiency testing samples.

The DPH's Lab audit visit occurred from August 14, 2020, and full certification was granted for microbiological analytes and methods on November 10, 2020. The next audit is scheduled for July 25, 2022. Illinois continues to meet the elements of its PPA with U.S. EPA;

- Illinois continues to audit all laboratories that produce results for compliance with SDWA at least once every two years and will meet all regulatory requirements.
- Illinois EPA's Division of Laboratories maintains a certification program and a certified State Lab for inorganic and organic contaminants of concern.
- IDPH maintains a certification program and a certified State Lab for bacteriological contaminants of concern.
- Illinois EPA and DPH submit responses to annual questionnaires to U.S. EPA Region 5.
- U.S. EPA Region 5 tracks state commitments to conduct laboratory certification activities by the IDPH and the Illinois EPA's Division of Laboratories.

Compliance and Enforcement Management

Illinois EPA and IDPH maintain an adequate enforcement and compliance assistance program. Illinois and U.S. EPA Region 5 continue to implement data exchange to ensure that enforcement resources are targeted at the non-compliant PWSs. Current and historical violation data³ and follow-up enforcement actions can be found at the following web site:

<http://water.epa.state.il.us/dww/index.jsp>

Data management and reporting

Illinois EPA and DPH maintain adequate data management systems (and updates it for new rules, and new versions of FedRep) that tracks requirements for all rules, which includes the appropriate combination of hardware, software, and personnel to accurately and within a reasonable timeframe identify the inventories (including routine updates of system information), maintain water quality monitoring information, and track compliance with all M/R, MCL, MRDL, TT, PN, and public information requirements. Illinois continues to meet the elements of its PPA with U.S. EPA;

- Illinois EPA and DPH continue to report to U.S. EPA actions and sample data quarterly and inventory data at least annually in accordance with 40 CFR 142.15.
- Illinois EPA and DPH utilizes SDWIS/STATE to manage water system compliance with all regulatory compliance concerns.

³ The data for this reporting originates and is maintained in the Illinois Safe Drinking Water Act Information System.

- U.S. EPA Region 5 tracked quarterly and annual data reporting requirements.

Operator Certification

Illinois continued to maintain regulations for the operation and maintenance of all public water systems by properly certified individuals. Illinois continues to meet the elements of its PPA with U.S. EPA;

- Illinois continues to report to U.S. EPA the status of the operator certification program on an annual basis.
- U.S. EPA Region 5 tracks completion of this report to avoid a 20 percent withholding of the Illinois Drinking Water Revolving Loan Fund grant should Illinois fail to meet this commitment.

Capacity Development

Illinois continued to work with existing PWSs and required capacity demonstrations for new PWSs to enhance water system technical, managerial, and financial capacity to operate in compliance with federal and state regulations.

Illinois EPA and IDPH continue to report to U.S. EPA the status of the Illinois Capacity Development Program on an annual basis. U.S. EPA Region 5 tracks completion of this report to avoid a 20 percent withholding of the Illinois Drinking Water Revolving Loan Fund grant should Illinois fail to meet this commitment.

Source Water Assessments and Protection

Illinois continued to report the number of CWSs with source water protection (SWP) plans and the number of CWSs implementing SWP measures electronically via SDWIS/STATE 49.6 percent (871 of 1,757) of CWS have source water protection (SWP) plans and where risk to public health is minimized through source water protection. Additionally, 72.6 percent (8,728,659 of 12,027,856) of the population served by community water systems have source water that has been substantially protected by their respective water systems. In August of 2019, Part 604 require CWS to prepare source water protection plans that must be approved by the Illinois EPA. CWS serving a total population greater than 50,000 plans are due by July 26, 2022, with CWS serving a total population greater than 3,000 due by July 26, 2023, and the remaining CWS's due by July 26, 2024. We anticipate that these efforts will drastically improve the percent of CWS that have minimized risks to public health through substantial implementation of source water protection programs. Illinois continues to update source water assessments and completed source water assessment reports for new public water systems.

Reporting Requirements

Each quarter, the Illinois EPA submits data to the Federal Safe Drinking Water Information System (SDWIS/FED), an automated database maintained by the U.S. EPA. The data submitted by Illinois include, but are not limited to the following:

- PWS inventory information.
- incidences of violations of MCLs, MRDLs, monitoring, and TT violations.

- information on enforcement activity related to these violations; and
- source water protection information.

The Illinois EPA publishes a report on its web site which contains information on permits issued during the previous year. The report includes CWS construction and operating permit process including milestones that measure program efficacy. The ICCG reports biennially to the Governor and the General Assembly on groundwater quality, quantity, and the State's enforcement efforts.

Measures and Indicators

Illinois continued to use quantitative measures developed by U.S. EPA Region 5 to regularly assess program performance. (See Appendix G) these include, but are not limited to the following activities:

- Illinois continued to participate in semi-annual conference calls with U.S. EPA Region 5 to discuss national program measures, Region 5 specific shared goals and special high priority queries.
- Illinois continued to provide information regarding lead action level exceedances upon request from U.S. EPA Region 5.
- U.S. EPA Region 5 continued to track the status of the Illinois Drinking water program with respect to national program measures, Region 5 specific shared goals and special high priority queries.
- Public health concerns related to Lead and Copper Rule (LCR) implementation will remain a high priority area of focus.

Monitoring: What We Test For—and Why

Illinois community water supplies are tested for different types of contaminants. The number of samples and how often the testing is done depends on the type of contaminant and other factors. The type of contaminant also determines what actions are taken if unacceptable levels are found in the water.

Acute vs. Chronic Indicators - It is important that safe drinking water be free of contamination which has the potential to cause either short-term or long-term health effects. Contaminants fall into two groups according to the health effects that they cause:

ACUTE

Acute effects occur within hours or days of the time that a person consumes a contaminant. People can suffer acute health effects from almost any contaminant if they are exposed to extraordinarily high levels (as in the case of a spill). In drinking water, microbes, such as bacteria and viruses, are the contaminants with the greatest chance of reaching levels high enough to cause acute health effects. Most people's bodies can fight off these microbial contaminants the way they fight off germs; and these acute contaminants typically do not have permanent effects. Nonetheless, when high enough levels occur, they can make people ill, and can be dangerous or deadly for infants, the elderly, and persons whose immune systems are already weak due to HIV/AIDS, chemotherapy, steroid use, or another reason.

CHRONIC

Chronic effects occur after people consume a contaminant at levels over U.S. EPA's safety standards for many years. U.S. EPA develops the standards for chronic MCLs on the basis that a person may have an adverse health effect after consuming two liters of water daily over a 70-year lifetime. The drinking water contaminants that can have chronic effects are chemicals (such as disinfection by-products, solvents, and pesticides), radionuclides (such as radium), and minerals (such as arsenic). Examples of the chronic effects of drinking water contaminants are cancer, liver or kidney problems, or reproductive difficulties.

As described previously, over 99 percent of the population served by Illinois CWS received drinking water in compliance with acute (short-term) health requirements, and 99 percent were in compliance with chronic (long-term) health requirements. It is important to note that most non-compliance was for a short duration, and the potential for health risk was minimized through prompt corrective action by the water supplies. Supplies with microbial problems (bacterial or turbidity non-compliance) are required to issue boil orders when the violation occurs. Community water systems with acute MCLs were limited to 2 (nitrate, nitrite, and e coli MCL and SWTR TT) water systems.

Bacterial Contamination. The coliform test is used as a general indicator of water quality in the system, in terms of potential microbial contamination. If the coliform test is negative, it is an indication that the system is adequately protected against contamination from other types of disease-causing organisms. However, if coliform bacteria are found in the water, it is assumed that the system may be compromised, and steps are taken to protect the people who use the water.

Total coliform bacteria (without the detection of fecal coliform or *E. coli*) are generally not harmful. In these cases, the system will identify the source of the contamination, correct the problem, and thoroughly disinfect its system. The public will also be notified of the situation; however, unless unusual circumstances exist to cause particular concern about the safety of the water, a boil water notice would not be issued as would be if fecal coliform or *E. coli* were found.

Nitrate/Nitrite. Community water supply systems in Illinois are tested once a year for nitrate, a chemical which may occur naturally in the environment but that can also enter the water from sources like fertilizer run-off, decaying plant and animal wastes, and sewage. Nitrate is a health concern primarily for infants under the age of six months. The infant's digestive system can convert the nitrate to nitrite, which can interfere with the ability of the infant's blood to carry oxygen. The result is a serious illness known as methemoglobinemia, or "blue baby syndrome." Methemoglobinemia can be fatal if nitrate levels in the water are high enough and the illness is not treated properly.

The MCL for nitrate in drinking water is 10 parts per million (ppm). If a water supply system exceeds the standard, the people who use the water are notified and advised not to use the water for mixing infant formula or other uses that might result in consumption of the water by infants under six months of age. The advisory is kept in place until steps can be taken to reduce nitrate levels in the water. Possible remedial measures include treating the water to remove the nitrate or drilling a new water well.

Older children and adults are generally not at risk from drinking nitrate-contaminated water. In fact, the average adult consumes about 20-25 milligrams of nitrate per day in food, primarily from vegetables. Because of changes that occur after six months of age, the digestive tract no longer converts nitrate into nitrite. However, some adults—including people with low stomach acidity and people with certain blood disorders—may still be at risk for nitrate-induced methemoglobinemia.

Inorganic Chemicals. Community water systems in Illinois are tested for 13 other inorganic chemicals in addition to nitrate. If past results don't indicate the presence of inorganic chemicals, testing is usually done once every three years; otherwise, it may be done as often as once a year. The list includes antimony, arsenic, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nickel, selenium, sulfate, and thallium. In some cases, these chemicals may be naturally present in the groundwater. If a water supply system were to exceed the MCL for one of these chemicals, the people who use the water would be notified, the monitoring schedule would be increased to quarterly, and appropriate steps would be taken to reduce levels of these chemicals in the water.

Radioactive Elements. Community water systems in Illinois are also usually tested once every three years—or as often as once a year, in some cases—for a list of radioactive elements. If past results don't indicate the presence of radioactive elements, testing is usually done once every nine years. If a system were to exceed the federal MCL for one of these radioactive elements, the people who use the water would be notified, the monitoring schedule would be increased to quarterly, and steps would be taken to reduce the levels of these elements in the water.

Disinfection By-Products. Disinfection rids drinking water of microbiological organisms, such as bacteria, viruses, and protozoa, that can cause and spread diseases. The most common method of disinfection is the addition of chlorine to drinking water supplies. Not only is chlorine effective against waterborne bacteria and viruses in the source water, it also provides residual protection to inhibit microbial growth after the treated water enters the distribution system. This means it continues working to keep the water safe as it travels from the treatment plant to the consumer's tap.

However, even though chlorine has been a literal lifesaver with regard to drinking water, it also has the potential to form by-products that are known to produce harmful health effects. Chlorine can combine with organic materials in the raw water to create contaminants called trihalomethanes (THMs) and haloacetic acids (HAAs). Repeated exposure to elevated levels of THMs over a long period of time could increase a person's risk of cancer. The formation of disinfection by-products is a greater concern for water systems that contain organics or use surface water, such as rivers, lakes, and streams, as their source. Surface water sources are more likely to contain the organic materials that combine with chlorine to form THMs and HAAs. All community water systems that add a disinfectant to the water must regularly test their treated water to determine if THMs and HAAs are present. If a water supply system were to exceed the

MCL for THMs or HAAs, the people who use the water would be notified, the monitoring schedule would be increased to quarterly, and appropriate steps would be taken to reduce levels of these chemicals in the water.

Lead and Copper. All community and non-transient public water systems have been tested for lead and copper. In community water systems, the water is tested in a specific number of homes within each system to determine if they exceeded the federal “action level” of 15 parts per billion (ppb) for lead or 1,300 ppb for copper. If a system exceeded the action level for lead or copper in more than 10 percent of the locations tested, it is required to take corrective action and do further testing. Current testing requirements are based partly on the results of that initial round of testing and of the success of subsequent efforts to reduce risk of lead contamination in systems that have previously exceeded the action level.

Monitoring Violations for Calendar Year 2021

The following table summarizes the number of CWS in violation with aspects of the drinking water compliance program during 2021. In the case of a violation, a watersystem takes corrective actions. These actions include public notification to inform affected residents of the situation and if there are any special precautions they should take. In all cases noted here, residents were advised directly by the water system at the time the violation occurred. All community water systems have also noted any violations in the annual water quality reports(also called Consumer Confidence Reports) they distribute to their residents.

Information on all violations for CWS in 2021 is in Appendix A and B for Appendix C and D for TNCWS and Appendix E and F for NTNCWS. Illinois EPA & IDPH) continue to address all systems not in compliance with state rules and regulations. Specifically, Illinois will address non-compliant PWSs that have a score of 11 or higher on the U.S. EPA’s Enforcement Targeting Tool report.

- As an enforcement option, Illinois may refer noncompliant PWSs to the U.S. EPA Region 5 for follow-up action or the Illinois Attorney General’s Office
- Illinois EPA and IDPH continue to keep records relating to enforcement decisions.
- Illinois EPA and IDPH continue to produce an annual compliance report by July 1 as part of a consolidated report program efficacy.
- U.S. EPA Region 5 tracked state commitments under measure SDWA02 (involving addressing with a formal enforcement action or return to compliance), the number of priority systems equal to the number of its PWSs that have a score of 11 or higher on the July Enforcement Targeting Tool report, and update Illinois quarterly.
- Illinois EPA and DPH worked with U.S. EPA on the National Compliance Initiative (NCI).

*Appendix C
Calendar Year 2021*

Summary Transient Non-Community Violations Sorted by Contaminant

Numbers Used from U.S. EPA's CDX Reporting Services database

Contaminant	# of Violations	# of Resolved Violations	# of PWS in Violation
E. COLI	3	0	3
Nitrate	186	18	168
Nitrite	2	0	2
Nitrate	1	1	1
Lead and Copper Rule	1	1	1
Coliform (TCR)	25	0	10
Revised Total Coliform Rule	243	4	243
Coliform (TCR)	11	0	7
Revised Total Coliform Rule	7	4	7
Revised Total Coliform Rule	412	165	326

Appendix D
Illinois EPA 2021 Annual Compliance Report
Maximum Contaminant Level and Treatment Technique Violations
Sorted by TNCWS
From U.S. EPA's CDX Reporting Services database

Appendix E
Calendar Year 2021

Summary Non-Transient Non-Community Violations Sorted by Contaminant

Numbers Used from U.S. EPA's CDX Reporting Services database

Contaminant	# of Violations	# of Resolved Violations	# of PWS in Violation
E. COLI	3	1	3
Arsenic	1	1	1
Barium	1	0	1
Cadmium	1	0	1
Chromium	1	0	1
Thallium, Total	1	0	1
Mercury	1	0	1
Nitrate	20	0	14
Nitrite	1	0	1
Selenium	1	0	1
Antimony, Total	1	0	1
Beryllium, Total	1	0	1
Arsenic	3	1	1
CYANIDE	1	0	1
Lead and Copper Rule	297	172	171
Public Notice	1	0	1
Stage 1 Disinfectants and Disinfection Byproducts Rule	2	0	2
Total Haloacetic Acids (HAA5)	18	8	13
TTHM	18	8	13
Interim Enhanced Surface Water Treatment Rule	1	1	1
Toxaphene	31	10	19
Chlordane	31	10	19
ETHYLENE DIBROMIDE	32	10	19
1,2-DIBROMO-3-CHLOROPROPANE	32	10	19
Total Polychlorinated Biphenyls (PCB)	31	10	19
Pentachlorophenol	34	10	21
Benzo(a)pyrene	17	6	11
HEXACHLOROBENZENE	16	6	11
2,4,5-TP	35	10	22
2,4-D	35	10	22
Heptachlor epoxide	31	10	19
Heptachlor	31	10	19

LASSO	31	10	19
Atrazine	31	10	19
Carbofuran	37	10	22
Hexachlorocyclopentadiene	16	6	11
Dinoseb	19	6	14
Picloram	18	6	13
Di(2-ethylhexyl) phthalate	17	6	12
Simazine	19	7	12
OXAMYL	19	6	14
Di(2-ethylhexyl) adipate	16	6	11
Glyphosate	16	6	11
Endrin	16	6	11
BHC-GAMMA	33	10	20
Methoxychlor	31	10	19
Dalapon	19	6	14
Diquat	17	6	11
Endothall	16	6	11
Revised Total Coliform Rule	72	37	52
Styrene	67	26	51
Ethylbenzene	67	26	51
Toluene	67	26	51
Benzene	67	26	51
CHLOROBENZENE	67	26	51
Tetrachloroethylene	67	26	51
1,1,2-Trichloroethane	67	26	51
Trichloroethylene	67	26	51
1,2-Dichloropropane	67	26	51
Carbon tetrachloride	67	26	51
1,1,1-Trichloroethane	67	26	51
1,2-Dichloroethane	67	26	51
trans-1,2-Dichloroethylene	67	26	51
1,1-Dichloroethylene	67	26	51
Vinyl chloride	67	26	51
p-Dichlorobenzene	67	26	51
o-Dichlorobenzene	67	26	51
DICHLOROMETHANE	67	26	51
Xylenes, Total	67	26	51
cis-1,2-Dichloroethylene	67	26	51
1,2,4-Trichlorobenzene	67	26	51
Vinyl chloride	1	1	1

Appendix F
Illinois EPA 2020 Annual Compliance Report
Maximum Contaminant Level and Treatment Technique Violations
Sorted by NTNCWS
From U.S. EPA's CDX Reporting Services database

PWS ID	PWS Name	Contaminant Name	Violation Category	Compliance Status

Appendix G
Table of FY21 Regional/State Measures

Description	Name and update schedule	Target
# of ETT priority systems to be addressed	OECA Measure:	CY21: # of ETT priority systems
Percent of CWSs and population served by CWSs that meet all applicable health-based drinking water standards	SDW-2.1.1	CY21: % CWS Systems CY21: % population served by CWS Systems
Percent of CWS and NCWS with san. survey w/in the past 3 or 5 yrs. as required.	R5 - Updated by Region 5 in April and October	CY21: % CWS % NCWS
Percent of CWS where risk to public health is minimized through source water protection (SDW-SP4a)	R5 SWP Program measure	CY21: % CWS Systems
Percent of population served by CWS where risk to public health is minimized through source water protection (SDW-SP4b)	R5 SWP Program measure	CY21: % population served by CWS Systems
All Rule Violation Completeness Reporting	R5 High Priority: Updated quarterly by Region 5	CY20: % of rules
1. Percent of <u>CWS systems</u> meeting all health-based standards	Shared Goals: Updated annually in April by Region 5	CY21: ≥95%
2. Percent of <u>population</u> of CWS_ meeting all health-based standards	Shared Goals: Updated annually in April by Region 5	CY21: ≥95%
3. Percent of <u>NTNCWSs</u> meeting all health-based standards	Shared Goals: Updated annually in April by Region 5	CY21: ≥95%
4. Percent of <u>TNCWSs</u> meeting all health-based standards	Shared Goals: Updated annually in April by Region 5	CY21: ≥95%
5. Percent of <u>population</u> served by CWSs with <u>significant /major monitoring violations</u>	Shared Goals: Updated annually in April by Region 5	CY21: <5%
6. Percent of <u>CWS systems</u> with <u>significant /major monitoring</u>	Shared Goals: Updated annually in April by Region 5	CY21: <10%

<u>violations</u> (includes LCR Type 66 violations)		
7. Percent of <u>NTNCWSs</u> with significant/major monitoring violations for <u>acute</u> health risks	Shared Goals: Updated annually in April by Region 5	CY21: <5%
8. Percent of <u>NTNCWSs</u> with significant/major monitoring violations for <u>chronic</u> health risks	Shared Goals: Updated annually in April by Region 5	CY21: <10%
9. Percent of <u>TNCWSs</u> with significant/major monitoring violations	Shared Goals: Updated annually in April by Region 5	CY21: <10%
