

NPDES Permit No. IL0003514
Notice No. JAR: 15070101

Public Notice Beginning Date: **August 18, 2015**

Public Notice Ending Date: **September 17, 2015**

National Pollutant Discharge Elimination System (NPDES)
Permit Program

Draft Reissued NPDES Permit to Discharge into Waters of the State

Public Notice/Fact Sheet Issued By:

Illinois Environmental Protection Agency
Bureau of Water,
Division of Water Pollution Control
Permit Section
1021 North Grand Avenue East
Post Office Box 19276
Springfield, Illinois 62794-9276
217/782-0610

Name and Address of Discharger:

St. Mary's Cement, Inc.
1914 West Oak Lane
Dixon, Illinois 61021

Name and Address of Facility:

St. Mary's Cement, Inc.
1914 West Oak Lane
Dixon, Illinois 61021
(Lee County)

The Illinois Environmental Protection Agency (IEPA) has made a tentative determination to issue a NPDES permit to discharge into the waters of the state and has prepared a draft permit and associated fact sheet for the above named discharger. The Public Notice period will begin and end on the dates indicated in the heading of this Public Notice/Fact Sheet. The last day comments will be received will be on the Public Notice period ending date unless a commentor demonstrating the need for additional time requests an extension to this comment period and the request is granted by the IEPA. Interested persons are invited to submit written comments on the draft permit to the IEPA at the above address. Commentors shall provide his or her name and address and the nature of the issues proposed to be raised and the evidence proposed to be presented with regards to those issues. Commentors may include a request for public hearing. Persons submitting comments and/or requests for public hearing shall also send a copy of such comments or requests to the permit applicant. The NPDES permit and notice number(s) must appear on each comment page.

The application, engineer's review notes including load limit calculations, Public Notice/Fact Sheet, draft permit, comments received, and other documents are available for inspection and may be copied at the IEPA between 9:30 a.m. and 3:30 p.m. Monday through Friday when scheduled by the interested person.

If written comments or requests indicate a significant degree of public interest in the draft permit, the permitting authority may, at its discretion, hold a public hearing. Public notice will be given 45 days before any public hearing. Response to comments will be provided when the final permit is issued. For further information, please call Jaime Rabins at 217/782-0610.

The applicant is engaged in the operation of a mine processing area and cement processing plant (SIC 1422 and 3241). The facility produces Portland Cement. Plant operation results in an average discharge of 0.328 MGD of compressor cooling water from the Old Clay Storage Building, raw mills and raw mill compressor cooling water, filter backwash water from the river water treatment system, vehicle wash water, condensate from the main stack continuous emissions monitoring system (CEMS), condensate from the CEMS air conditioning system and storm water from outfall 001, 1.241 MGD of coal and petroleum coke pile runoff, plant air compressor cooling water, coal and petroleum coke mill cooling water, precipitator compressor cooling water, preheater fan cooling water, analyzer water, Dracco baghouse fan cooling water, homogenizing silos compressor cooling water, #1,2,3 kiln piers discharge end cooling water, #1,2,3 finish mills cooling water, cement coolers cooling water, #1,2,3 finish mill compressor cooling water, #4 finish mill cooling water, #4 finish mill compressor cooling water, and storm water from outfall 002, 0.048 MGD of packhouse compressors "A" pump and "B" pump cooling water, packhouse air compressor and storm water from outfall 003, 0.409 MGD of #1,2,3 kiln piers feed end cooling water, amrex cooling water, a/c condensate, and storm water runoff from an inactive limestone mining area from outfall 004, storm water runoff on an intermittent basis from an inactive limestone mining area, rock crushing and stock pile area, and coal waste product storage and disposal area from outfall 005, an intermittent discharge of storm water runoff from an inactive mining area and material stock piles from outfall 006, and 0.014 MGD of sewage treatment plant effluent from outfall 015.

The following modifications are proposed:

The "B" Pump Compressor Cooling Water listed as a contributory wastestream to outfall 002 is actually tributary to 003. It was removed from 002 and added to outfall 003.

Packhouse Compressors Instrument Air Cooling Water tributary to outfall 003 is incorrect and was changed to read Packhouse Air Compressor.

The kiln system #4 is no longer in operation so the following contributing sources were removed from outfall 004: #4 Kiln Piers Discharge End Cooling Water, #4 Kiln Compressors Cooling Water, Wheelabrator Baghouse Fan Motor Bearing Cooling Water, and #4 Kiln Piers Feed End Cooling Water. Amerex Cooling Water and A/C Condensate were added to outfall 004 but are existing sources.

Application is made for existing discharge(s) which are located in Lee County, Illinois. The following information identifies the discharge point, receiving stream and stream classifications:

Outfall	Receiving Stream	Latitude		Longitude		Stream Classification	Biological Stream Characterization
001	Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated
002	Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated
003	Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated
004	Unnamed Ditch Tributary to Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated
005	Unnamed Ditch Tributary to Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated
006	Unnamed Ditch Tributary to Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated
015	Rock River	40° 51' 40"	North	89° 27' 10"	West	General Use	Not Rated

To assist you further in identifying the location of the discharge please see the attached map.

The facility discharges to the Rock River Segment P-21 at a point where 1218 cfs of flow exists upstream of the outfall at critical 7Q10 low-flow conditions from outfalls 001, 002, 003, and 015. The waterbody segment is on the draft 2014 Illinois Integrated Water Quality Report and Section 303(d) List. The receiving water has not been given an integrity rating or been listed as biologically significant in the 2008 Illinois Department of Natural Resources publication *Integrating Multiple Taxa in a Biological Stream Rating System*. The impaired designated uses and pollutants causing impairment are tabulated below:

Designated Uses	Pollutants Causing Impairment
Aquatic Life	Ethanol and Fish Kills (non-pollutant)
Fish Consumption	Mercury and Polychlorinated Biphenyls (PCB's)

The facility discharges to unnamed tributaries of the Rock River at a point where zero cfs of flow exists upstream of the outfall at critical 7Q10 low-flow conditions from outfalls 004, 005, and 006. The unnamed tributaries of the Rock River are not on the draft 2014 Illinois Integrated Water Quality Report and Section 303(d) List as they have not been assessed. The receiving water has not been given an integrity rating or been listed as biologically significant in the 2008 Illinois Department of Natural Resources publication *Integrating Multiple Taxa in a Biological Stream Rating System*.

The discharge(s) from the facility shall be monitored and limited at all times as follows:

Outfall: 001 Non Contact Cooling Water and Storm Water (DAF = 0.328 MGD)

This discharge consists of:

1. Compressor Cooling Water from the Old Clay Storage Building
2. Raw Mills and Raw Mill Compressor Cooling Water
3. Filter Backwash Water from the River Water Treatment System
4. Vehicle Wash Water
5. Condensate from the Main Stack Continuous Emissions Monitoring System (CEMS)
6. Condensate from the CEMS Air Conditioning System
7. Stormwater

Approximate Flow:

- 0.1 MGD
- 0.15 MGD
- 0.025 MGD
- 0.01 MGD
- 2 GPD
- 8 GPD
- Intermittent

Aug - Feb				4.0	5.5	3.5	35 IAC 302.206

Load Limit Calculations:

- A. Load limit calculations for the following pollutant parameters discharged from outfall 015 were based on an average flow of 0.014 MGD and using the formula of average flow (MGD) X concentration limit (mg/l) X 8.34 = the average or maximum load limit (lbs/day): CBOD₅ and Total Suspended Solids.
- B. Production based load limits were calculated by multiplying the average production by the effluent limit contained in 40 CFR 411. Production figures utilized in these calculations for the following subcategories are as follows:

Subcategory	Production Rate
Non Leaching	2,184 lbs of Product per Day

Total Suspended Solids (TSS) were limited using Federal production based load limits.

The following sample calculation shows the methodology utilized to determine production based load limitations:

$$\text{TSS max.} = 0.005 \frac{\text{lbs}}{1000 \text{ lbs of product}} \times \frac{2000 \text{ lbs}}{\text{ton}} \times 2184 \text{ tons} = 21.84 \approx 22 \frac{\text{lbs}}{\text{day}}$$

Since the facility discharges industrial wastewater from outfalls 001, 002, 003, and 004 this mass limit will apply to the sum of the mass from each outfall.

The load limits appearing in the permit will be more stringent of the State and Federal Guidelines.

The following explain the conditions of the proposed permit:

The special conditions clarify pH limits, monitoring location, discharge monitoring reports, usage of water treatment additives, treatment plant operator requirements, re-opening of the permit, stormwater discharges, abandonment plans, and mining setback requirements.

NPDES Permit No. IL0003514

| 5. Condensate from the Main Stack Continuous Emissions Monitoring System (CEMS) | 2 GPD |
| 6. Condensate from the CEMS Air Conditioning System | 8 GPD |
| 7. Stormwater | Intermittent |

PARAMETER	LOAD LIMITS lbs/day DAF (DMF)		CONCENTRATION LIMITS mg/l		SAMPLE FREQUENCY	SAMPLE TYPE
	30 DAY AVERAGE	DAILY MAXIMUM	30 DAY AVERAGE	DAILY MAXIMUM		
Flow(MGD)	See Special Condition 1				*	
pH	See Special Condition 2				1/Month	Grab
Total Suspended Solids	See Special Condition 15		15	30	1/Month	Grab
Effluent Temperature	See Special Condition 10				1/Month	Single Reading
Influent Temperature					1/Month	Single Reading
Temperature Rise**				3°C	1/Month	Calculation

*Effluent sampling for flow shall be continuous if hardware allows otherwise it shall be a single reading when monitoring each parameter.

**Temperature Rise shall be the subtraction of Influent Temperature from the Effluent Temperature.

The temperature of the supply water discharged from this outfall on the day of sampling shall be reported as the Influent temperature on the DMR. The temperature shall be measured as close as practical to the source water body but prior to entering any equipment for cooling purposes.

Total Suspended Solids discharges from this outfall shall be reported as a mass in lbs/day and concentration in mg/L on the monthly Discharge Monitoring Report.

Effluent Limitations and Monitoring

From the effective date of this permit until the expiration date, the effluent of the following discharge(s) shall be monitored and limited at all times as follows:

Outfall: 002 Non Contact Cooling Water, Coal and Coke Pile Runoff, and Stormwater (DAF = 1.241 MGD)

This discharge consists of:

Approximate Flow:

1. Coal and Petroleum Coke Pile Runoff	0.04 MGD
2. Plant Air Compressor Cooling Water	0.01 MGD
3. Coal and Petroleum Coke Mill Cooling Water	0.08 MGD
4. Precipitator Compressors Cooling Water	0.05 MGD
5. Preheater Fan Cooling Water	0.1 MGD

*Effluent sampling for flow shall be continuous if hardware allows otherwise it shall be a single reading when monitoring each parameter.

**The Total Suspended Solids (TSS) samples shall be taken three times a month as separate grab samples or one time a month as a composite sample.

***Composite TSS samples shall consist of at least 3 sample aliquots of approximately equal volume of at least 100 milliliters each, collected at periodic intervals within a 24-hour period. If the permittee elects to take and analyze grab samples, in lieu of a composite sample then: 1) if the discharge is expected to occur on only a single day, three grab samples may be taken within a single 24-hour period or, 2) if the discharge is expected to occur on more than one day three separate grab samples shall be taken over more than one day to represent the monthly discharge. The one composite sample or three grab samples shall be representative of the discharge over the calendar month. The analysis results of each composite and grab sample for TSS shall be reported on the Discharge Monitoring Reports. The monthly average for TSS shall be reported on the Discharge Monitoring Reports.

Effluent Limitations and Monitoring

From the effective date of this permit until the expiration date, the effluent of the following discharge(s) shall be monitored and limited at all times as follows:

Construction Authorization

Authorization is hereby granted to the above designee to construct the mine and mine refuse area described as follows:

The facility is an existing, approximately 802 acre inactive limestone quarry, aggregate processing area and cement processing plant, designated as St. Mary's Cement, located in Sections 22, 27, 33 and 34, T22N, R9E of the 4th P.M. in Lee County, Illinois in Dixon. Facility operations include the crushing, sizing, grading, and stockpiling of limestone aggregate which is processed through a rotary kiln for the production of Portland Cement. Plant operation results in an average discharge of 0.328 MGD of compressor cooling water from the Old Clay Storage Building, raw mills and raw mill compressor cooling water, filter backwash water from the river water treatment system, vehicle wash water, condensate from the main stack continuous emissions monitoring system (CEMS), condensate from the CEMS air conditioning system and storm water from outfall 001, 1.241 MGD of coal and petroleum coke pile runoff, plant air compressor cooling water, coal and petroleum coke mill cooling water, precipitator compressor cooling water, preheater fan cooling water, analyzer water, Dracco baghouse fan cooling water, homogenizing silos compressor cooling water, #1,2,3 kiln piers discharge end cooling water, #1,2,3 finish mills cooling water, cement coolers cooling water, #1,2,3 finish mill compressor cooling water, #4 finish mill cooling water, #4 finish mill compressor cooling water, and storm water from outfall 002, 0.048 MGD of packhouse compressors "A" pump and "B" pump cooling water, packhouse air compressor and storm water from outfall 003, 0.409 MGD of #1,2,3 kiln piers feed end cooling water, amerox cooling water, a/c condensate, and storm water runoff from an inactive limestone mining area from outfall 004, storm water runoff on an intermittent basis from an inactive limestone mining area, rock crushing and stock pile area, and coal waste product storage and disposal area from outfall 005, an intermittent discharge of storm water runoff from an inactive mining area and material stock piles from outfall 006, and 0.014 MGD of sewage treatment plant effluent from outfall 015. Outfalls 001, 002, 003, 005, 006, 014 and 015 and the flows tributary to these outfalls discharge to the Rock River. Outfall 004 discharges to an unnamed tributary of the Rock River. The facility operates a sedimentation basin located near the cement plant and receives filter backwash from the river water treatment system tributary to outfall 001, a 26' X 6' sediment vault to treat runoff from paved, building roof, and gravel roads tributary to outfall 001, sedimentation pond 02 sized at 1.14 acre feet with a rock check dam outlet tributary outfall 002, proposed floc log station #3 to treat runoff from most of the plant buildings, a vegetated area to the east and much of the former rail yard south of the plant tributary to outfall 004, sedimentation pond 41 sized at 0.44 acre feet which receives runoff from a daily stockpile area tributary to outfall 004, sedimentation pond 42 sized at 1.04 acre feet with a rock check dam outlet receives runoff from an open sided cement byproduct storage building tributary to outfall 004, proposed floc log station #2 at the inlet of sedimentation pond 42, proposed rock check dam 43 will receive runoff from offsite areas tributary to outfall 004, proposed floc log dosing station #1 located on the west side of the crushing plant upstream of proposed sedimentation pond 050, proposed sedimentation pond 050 sized at 5.67 acre feet to receive runoff from rock crushing and processing plant, haul roads, and material storage area tributary to outfall 005, sedimentation pond 051 with proposed rock check outlet sized at 1.0 acre feet which receives runoff from the coal waste product storage and holding area tributary to outfall 005, proposed sedimentation basin 055 sized at 0.5 acre feet to receive drainage from mined areas consisting of mostly fractured bedrock tributary to outfall 005. A sedimentation basin which receives runoff from the inactive mine area and is tributary to outfall 006. A sewage treatment plant has process units for screening, comminution, raw sewage pumping, activated sludge aeration, secondary settling, and disinfection. Chlorine or liquid sodium hypochlorite injection is authorized for disinfection purposes for the discharges from outfall 015.

The abandonment plan received by the Agency on May 20, 2010 shall be executed and completed in accordance with Section 405.109 of Subtitle D: Mine Related Water Pollution.

This Authorization is issued subject to the following Special Condition(s). If such Special Conditions require additional or revised facilities, satisfactory engineering plan documents must be submitted to this Agency for review and approval.

If any statement or representation in the application is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder.

The issuance of this permit (a) shall not be considered as in any manner affecting the title of the premises upon which the mine or mine refuse area is to be located; (b) does not release the permittee from any liability for damage to person or property caused by or resulting from the installation, maintenance or operation of the proposed facilities; (c) does not take into consideration the structural stability of any units or parts of the project; and (d) does not release the permittee from compliance with other applicable statutes of the State of Illinois, or with applicable local laws, regulations or ordinances.

This permit may not be assigned or transferred. Any subsequent operator shall obtain a new permit from the Illinois Environmental Protection Agency.

There shall be no deviations from the approved plans and specifications unless revised plans, specifications and application shall first have been submitted to the Illinois Environmental Protection Agency and a supplemental permit issued.

The permit holder shall notify the Illinois Environmental Protection Agency (217/782-3637) immediately of an emergency at the mine or mine refuse area which causes or threatens to cause a sudden discharge of contaminants into the waters of Illinois and shall immediately undertake necessary corrective measures as required by Rule 405.111 under Chapter 1, Subtitle D: Mine Related Water Pollution of Illinois Pollution Control Board Rules and Regulations.

Final plans, specifications, application and supporting documents as submitted and approved shall constitute part of this permit and are identified in the records of the Illinois Environmental Protection Agency, by the permit number designated in the heading of this Section.

NPDES Permit No. IL0003514

Special Conditions

- B. In addition, the discharge shall not cause abnormal temperature changes that may adversely affect aquatic life unless caused by natural conditions.
- C. The discharge shall not cause the maximum temperature rise above natural temperatures to exceed 2.8° C (5° F).
- C. The monthly maximum value shall be reported on the DMR form.

SPECIAL CONDITION 11. A zone of initial dilution (ZID) is recognized for ammonia with dimensions of 1.0 foot across the width of the river from the end-of-pipe of outfall 015 and 1.0 foot downstream from this point. Within the ZID, 10.3:1 dilution is afforded. A mixing zone is recognized with dimensions extending 1.0 foot across the width of the river and 1 foot downstream. Within the mixing zone 14.2:1 dilution is afforded.

SPECIAL CONDITION 12. The Agency has determined that the effluent limitations in this permit constitute BAT/BCT for storm water which is treated in the existing treatment facilities for purposes of this permit reissuance, and no pollution prevention plan will be required for such storm water. In addition to the chemical specific monitoring required elsewhere in this permit, the permittee shall conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity, and determine whether any facility modifications have occurred which result in previously-treated storm water discharges no longer receiving treatment. If any such discharges are identified the permittee shall request a modification of this permit within 30 days after the inspection. Records of the annual inspection shall be retained by the permittee for the term of this permit and be made available to the Agency on request.

SPECIAL CONDITION 13. The permittee shall notify the Agency in writing by certified mail within thirty days of abandonment, cessation, or suspension of active mining for thirty days or more unless caused by a labor dispute. During cessation or suspension of active mining, whether caused by a labor dispute or not, the permittee shall provide whatever interim impoundment, drainage diversion, and wastewater treatment is necessary to avoid violations of the Act or Subtitle D, Chapter 1.

SPECIAL CONDITION 14. Mining excavation operations shall maintain a minimum setback of 200 feet from the potable wells identified as wells 15, 16, 27 and 35 in the permit application, pursuant to section 14.2 of the Illinois Environmental Protection Act.

SPECIAL CONDITION 15. The sum of total suspended solids mass discharged from outfalls 001, 002, 003, 004 shall not exceed 22 lbs per day.

SPECIAL CONDITION 16. All samples for total residual chlorine (TRC) shall be analyzed by an applicable method contained in 40 CFR 136, equivalent in accuracy to low-level amperometric titration. Any analytical variability of the method used shall be considered when determining the accuracy and precision of the results obtained.
