Illinois Landfill Disposal Capacity Report

July 2016

Introduction

Pursuant to Section 4 of the Illinois Solid Waste Management Act, the Illinois Environmental Protection Agency (Illinois EPA) has prepared this report reflecting the available disposal capacity of permitted landfills and the estimated life expectancy of those landfills. This report identifies the cumulative remaining disposal capacity and landfill life expectancy for the state as a whole, each of the seven administrative regions of the state, and each active permitted landfill. Under Sections 22.15 and 22.44 of the Illinois Environmental Protection Act, each permitted solid waste landfill is required to report to the Illinois EPA the volume of solid waste accepted during the calendar year and the remaining disposal capacity as of January 1 of the following calendar year. For this report, the projected life expectancy of each landfill is determined by dividing the remaining disposal capacity of the landfill on January 1, 2016, by the landfill's disposal rate during calendar year 2015.

During calendar year 2015, 38 permitted landfills in Illinois reported receiving a total of 44,947,165 cubic yards of solid waste. These landfills have a remaining combined available disposal capacity of 942,656,074 cubic yards. At the current disposal rate, these landfills will have a cumulative life expectancy of approximately 20.9 years. However, landfill capacity and life expectancy may vary year-to-year based on a number of factors, including waste disposal rates, landfill expansion, and the construction of new landfills.

Statewide Disposal Capacity

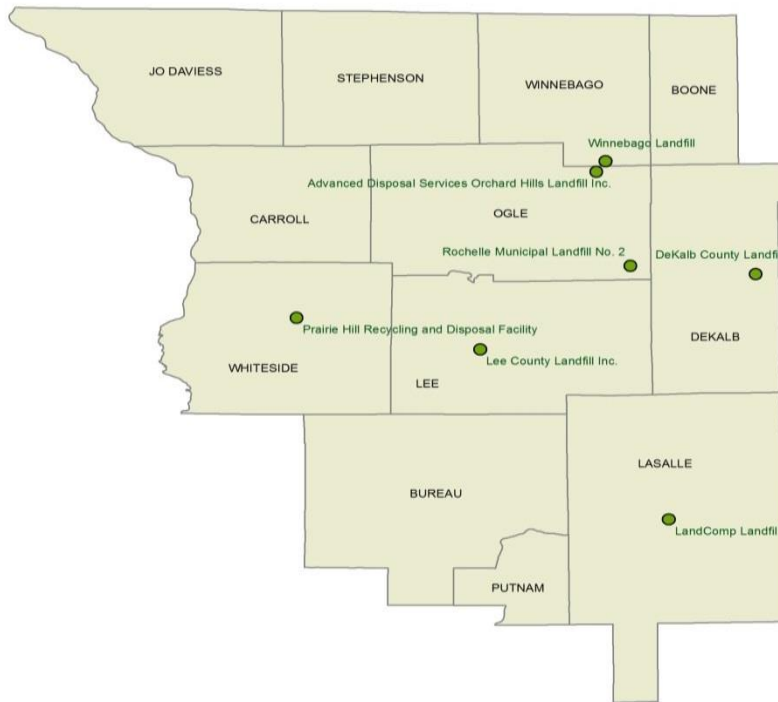

The Illinois EPA divides the state into seven administrative regions. These regions have different landfill populations, disposal rates, landfill capacities, and resulting landfill life expectancies. The table below identifies this information on a regional basis.
