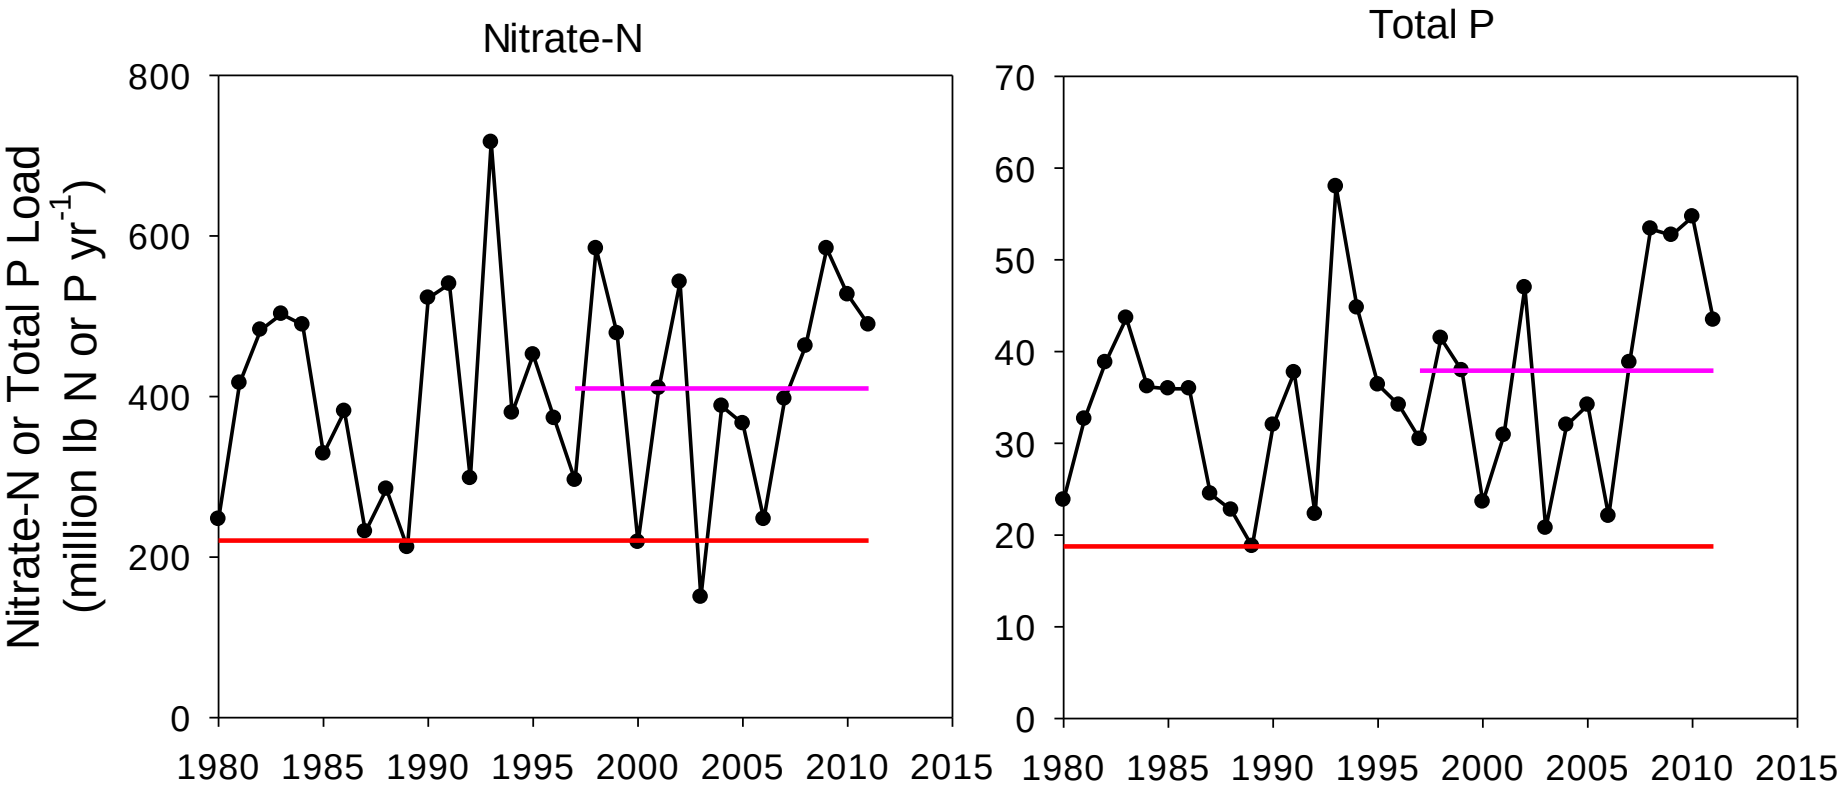
Nitrate-N and Total P Targets



Red line is target, purple is average 1997 to 2011

Point Source P Estimates

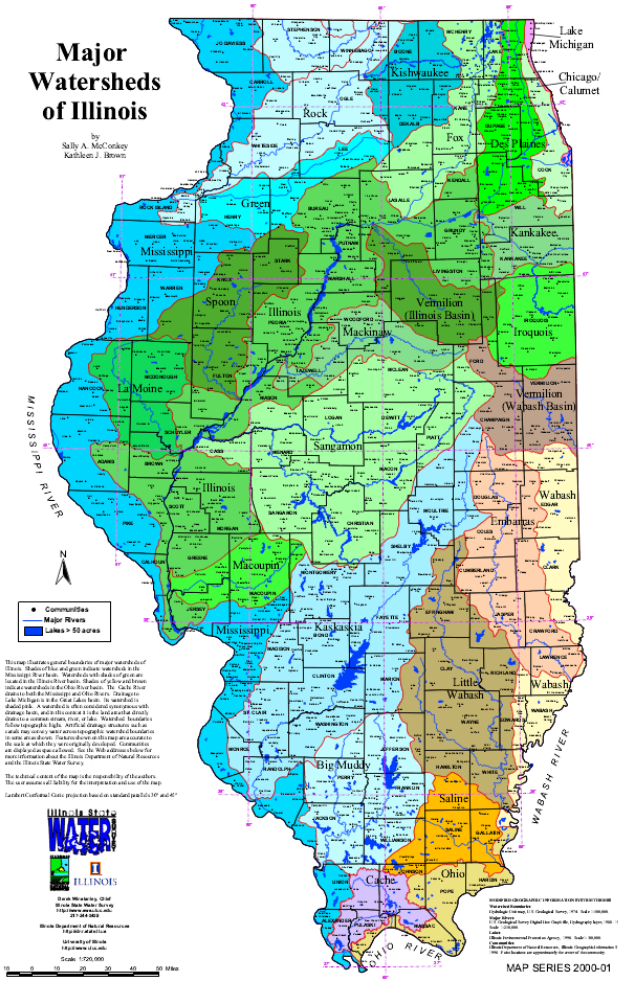
Point Source Limit (mg P/L)	million lb of P reduced	% of target (18.8 million lb P)
All majors to 1 mg/L standard (0.7 mg P/L actual)	10.4	55
Top 20 majors to 0.7	6.1	32
Top 30 majors to 0.7	7.0	37
Top 50 majors to 0.7	7.8	41
All majors to 0.3	13.1	70
Top 20 majors to 0.3	8.0	42
Top 30 majors to 0.3	8.9	47
Top 50 majors to 0.3	9.9	52

Total P from point sources currently ~18.1 million lb P per year

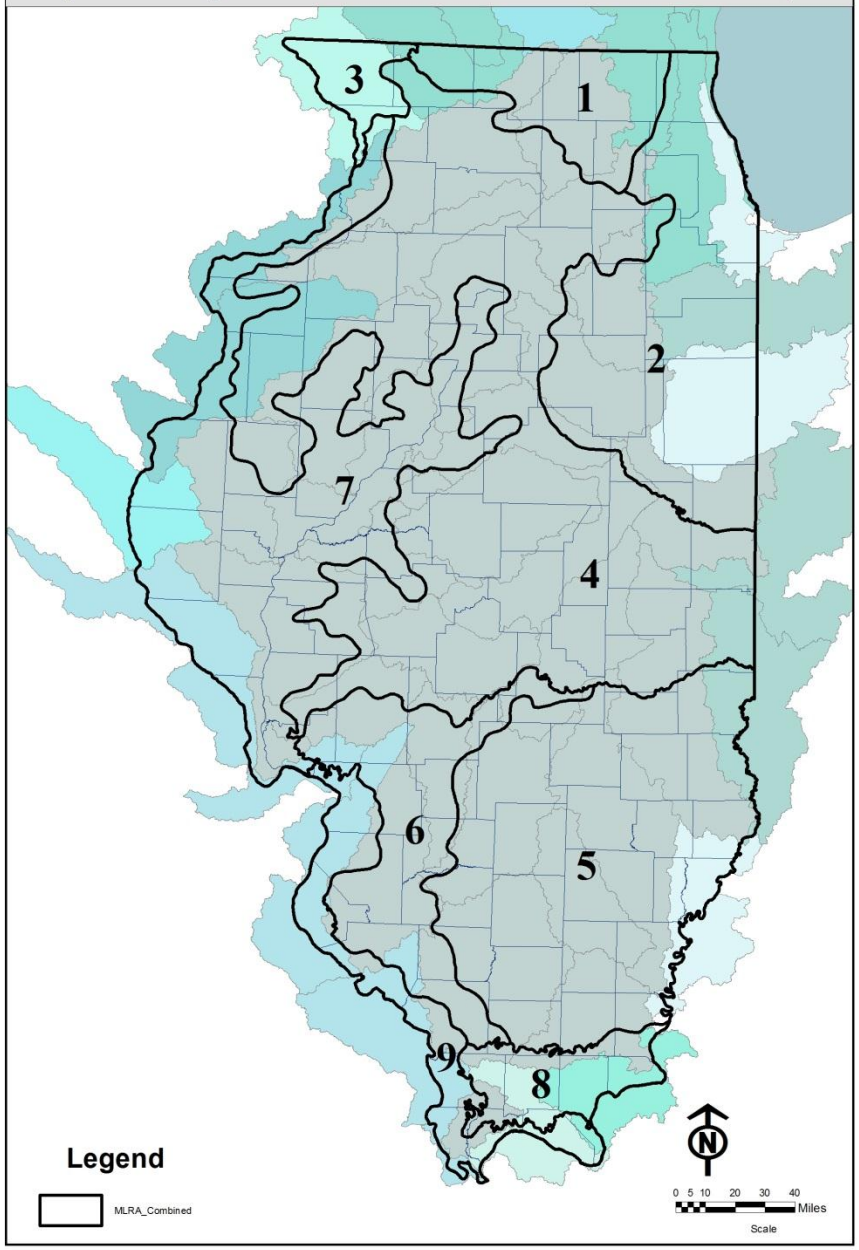
Possible intermediate reduction goal

- 30% total P reduction by 2025
  - top 50 majors reduce total P to 0.7 mg P/L (21%)
  - buffers and cover crops (9%)
- 20% nitrate-N reduction by 2025
  - fertilizer timing, cover crops, buffers, and bioreactors (20%)

to Gulf of Mexico



Combined MLRAs for Illinois
(Overlayed with HUC 8s & Counties)



Nitrate Yield by MLRA

Combined MLRA	Description	Drained cropland (acres)	Nitrate-N yield per row crop acre (lb N/acre/yr)	Nitrate-N yield per tile drained acre (lb N/acre/yr)	Nitrate-N yield from non-tiled land (lb N/acre/yr)
MLRA 1	Northern Illinois drift plain	288,491	20.4	43	6.6
MLRA 2	Northeastern Illinois heavy till plain	2,063,695	25.0	29	10.8
MLRA 3	Northern Mississippi Valley	20,942	31.3		31.3
MLRA 4	Deep loess and drift	5,437,807	19.6	26	9.9
MLRA 5	Claypan	310,087	6.6		6.6
MLRA 6	Thin loess and till	226,971	7.4	30	3.5
MLRA 7	Central Mississippi Valley, Northern Part	1,284,588	24.5	46	11.8
MLRA 8	Sandstone and shale hills and valleys	49,565	3.9		3.9
MLRA 9	Central Mississippi Valley, Western Part	23,769	4.0		4.0

Cost analysis

- Gary Schnitkey
  - agricultural costs per acre
- Mark David
  - point source costs
  - N loss reduction costs
- Greg McIsaac
  - P loss reduction costs

Agricultural Cost Estimates

- No changes in corn and soybean yields across scenarios
- No reduction in nitrogen application rates with timing changes
- Up front costs amortized over 20 years at 6% interest rate

Costs per acre

	Practice/Scenario	Cost Per Acre	Notes
In-field	Reducing N rate from background to the MRTN (10% of acres)	-$8	Reduce N rates (20 pounds)
	Nitrification inhibitor with all fall applied fertilizer on tile-drained corn acres	$7	Cost of inhibitor
	Split (50%) fall and spring (50%) on tile-drained corn acres	$17	Additional field pass, switch to N solutions
	Fall to spring on tile-drained corn acres	$18	Switch to N solutions, higher ammonia price, additional application costs
	Cover crops on all corn/soybean tile-drained acres	$29	Aerial applications of cereal rye
	Cover crops on all corn/soybean non-tiled acres	$29	Aerial applications of cereal rye
Edge-of-field	Bioreactors on 50% of tile-drained land	$17	Upfront costs of $133 per acre
	Wetlands on 25% of tile-drained land	$60	5% of farmland out of production Major cost is land ($11,000)
	Buffers on all applicable crop land (reduction only for water that interacts with active area)	$294 per buffer acre	Land costs plus $50 planting, $10 yearly maintenance
Land use change	Perennial/energy crops equal to pasture/hay acreage from 1987	$86	Less profit compared to corn-soybean rotation
	Perennial/energy crops on 10% of tile-drained land	$86	Less profit compared to corn-soybean rotation

P Reduction Practices

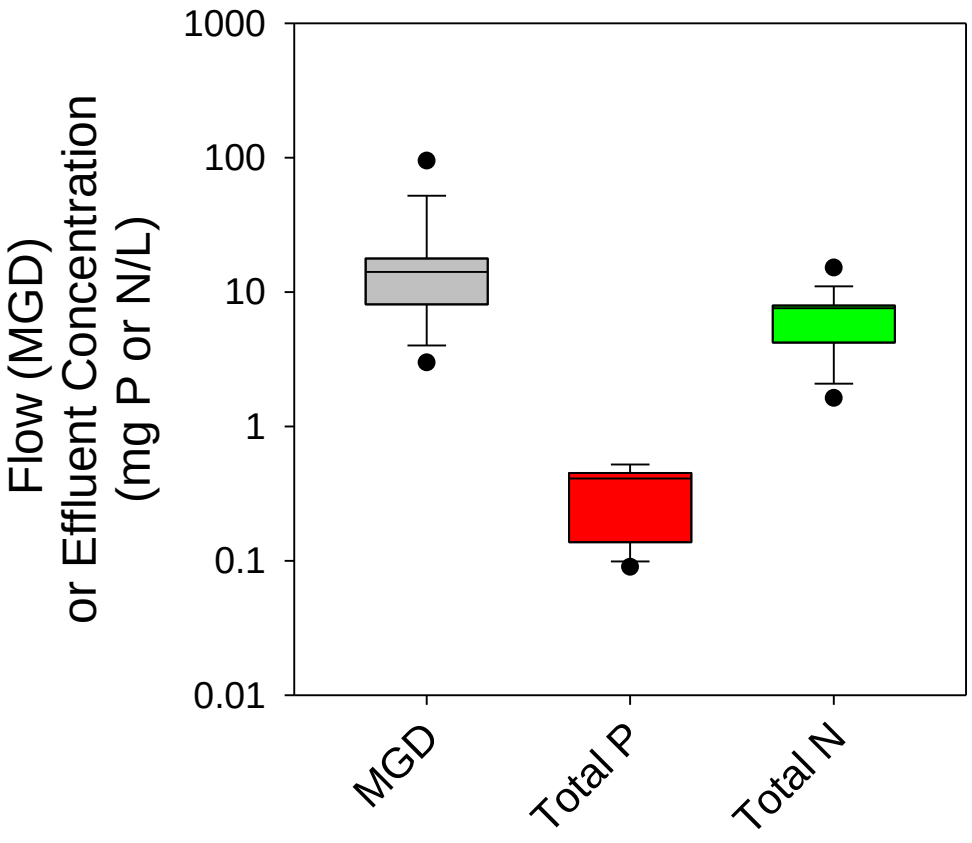
- Reduce tillage: -$16 per acre
  - One less field pass
- Eliminate P application for six years: -$15 per acre
  - Eliminate 6 years of applications, spread over 20 years to draw down P reserves
- Incorporate P: $6 per acre
  - Additional application costs

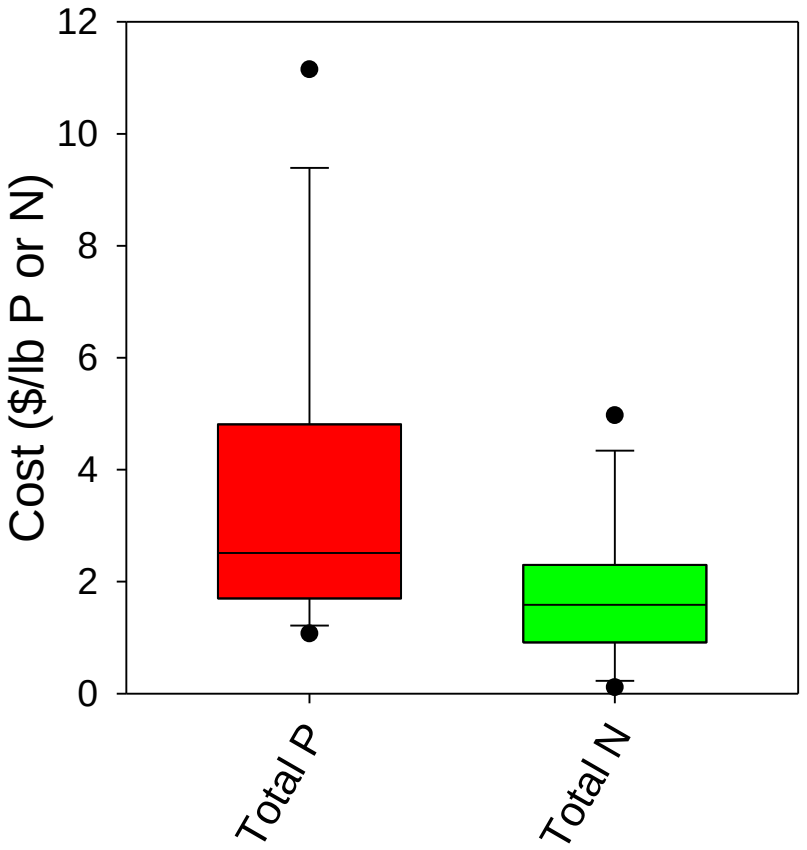
Point Source Costs

- dependent on size of facility
  - costs >>>> for smaller STP's (< 1-2 MGD)
- great variability among STP's
- used data from:
  - North Shore Sanitary District
    - three plant cost analysis
  - USEPA 2008 Municipal Nutrient Removal Technologies report
    - eight plant case study
- more data to come, cost per lb likely to increase

Point Source Cost Summary

(more estimates to be added)





Median $2.92/lb P $1.72 lb/N

Example Statewide Results for N

	Practice/Scenario	Nitrate-N reduction per acre (%)	Nitrate-N reduced (million lb N)	Nitrate-N Reduction % (from baseline)	Cost ($/lb N removed)
	Baseline		410		
In-field	Reducing N rate from background to the MRTN (10% of acres)	10	2.3	0.6	-4.25
	Nitrification inhibitor with all fall applied fertilizer on tile-drained corn acres	10	4.3	1.0	2.33
	Split (50%) fall and spring (50%) on tile-drained corn acres	7.5 to 10	13	3.1	6.22
	Fall to spring on tile-drained corn acres	15 to 20	26	6.4	3.17
	Cover crops on all corn/soybean tile-drained acres	30	84	20.5	3.21
	Cover crops on all corn/soybean non-tiled acres	30	32	7.9	11.33
Edge-of-field	Bioreactors on 50% of tile-drained land	40	56	13.6	1.38
	Wetlands on 25% of tile-drained land	40	35	8.5	4.05
	Buffers on all applicable crop land (reduction only for water that interacts with active area)	90	36	8.7	1.63
Land use change	Perennial/energy crops equal to pasture/hay acreage from 1987	90	10	2.5	9.72
	Perennial/energy crops on 10% of tile-drained land	90	25	6.1	3.18
Point source	Point source reduction to 10 mg nitrate-N/L		14	3.4	1.72
	Point source reduction in N due to biological nutrient removal for P		8	1.8	

Example Statewide Results for P

	Practice/Scenario	Total P reduction per acre (%)	Total P reduced (million lb P)	Total P Reduction % (from baseline)	Cost ($/lb P removed)
	Baseline		37.5		
In-field	Convert 1.8 million acres of conventional till eroding >T to reduced, mulch or no-till	50	1.8	5.0	-16.60
	P rate reduction on fields with soil test P above the recommended maintenance level	7	1.9	5.0	-97.50
	Cover crops on all corn/soybean acres	30	5.7	15.2	109.40
	Cover crops on 1.6 million acres eroding>T currently in reduced, mulch or no-till	50	1.9	5.0	24.50
	Incorporation of all P fertilizers	25	Unknown area	Unknown	
Edge-of-field	Wetlands on 25% of tile-drained land	0	0	0.0	
	Buffers on all applicable crop land	25-50	4.8	12.9	11.97
Land use change	Perennial/energy crops equal to pasture/hay acreage from 1987	90	1.0	2.7	93.59
	Perennial/energy crops on 1.6 million acres>T currently in reduced, mulch or no-till	90	3.5	9.0	40.40
	Perennial/energy crops on 10% of tile-drained land	50	0.3	0.8	250.07
Point source	Point source reduction to 0.5 mg total P/L		11.7	31.2	2.92

University of Illinois Science Team Website

Iowa Costs

Overall Comparison of Nitrate-N Practices

Practice/Scenario	Nitrate-N Reduction % (from baseline)	Cost of N Reduction ($/lb)	Other Benefits (Ecosystem Services)
Reducing nitrogen application rate from background to the MRTN	9	-0.58	
Cover crops (rye) on ALL CS and CC acres	28	5.96	++
Install Wetlands to treat 45% of the ag acres	22	1.38	++
Install Denitrification Bioreactors on all tile drained acres	18	0.92	
Install Buffers on all applicable lands	7	1.91	++
Installing Controlled Drainage on all applicable acres	2	1.29	
Perennial crops (energy crops) on ~6.5 million acres	18	21.46	++

Overall Comparison of Phosphorus Practices

Practice/Scenario	P Reduction % (from baseline)	Cost of P Reduction ($/lb)	Other Benefits (Ecosystem Services)
Cover crops (rye) on ALL CS and CC acres	50	60	++
Convert all tillage to no-till	39	14	++
P rate reduction in MLRA's that have high to very high soil test P	7	-110	
Establish streamside buffers (35ft) on all crop land	18	14	++
Perennial crops (energy crops) equal to pasture/hay acreage from 1987	29	238	++
Pasture and Land Retirement to equal acreage of Pasture/Hay and CRP from 1987	9	120	++
