

Appendix A

SSURGO Soils

Description	Acres	Percent
Alvin fine sandy loam, 10 to 18 percent slopes, eroded	26.34	0.0143
Assumption silt loam, 10 to 15 percent slopes, eroded	8.17	0.0044
Assumption silt loam, 10 to 18 percent slopes, eroded	1609.73	0.8766
Assumption silt loam, 2 to 5 percent slopes	150.14	0.0818
Assumption silt loam, 2 to 5 percent slopes, eroded	547.79	0.2983
Assumption silt loam, 5 to 10 percent slopes, eroded	3262.57	1.7767
Buckhart silt loam, 0 to 2 percent slopes	1584.89	0.8631
Buckhart silt loam, 2 to 5 percent slopes	2919.71	1.5900
Camden silt loam, 0 to 2 percent slopes	7.23	0.0039
Camden silt loam, 2 to 5 percent slopes	30.53	0.0166
Camden silt loam, 5 to 10 percent slopes, eroded	11.09	0.0060
Clarksdale silt loam, 0 to 2 percent slopes	1159.82	0.6316
Clarksdale silt loam, 2 to 5 percent slopes	4.95	0.0027
Clarksdale silt loam, terrace, 0 to 2 percent slopes	4.04	0.0022
Cowden silt loam, 0 to 2 percent slopes	1299.10	0.7075
Denny silt loam	17.40	0.0095
Denny silt loam, 0 to 2 percent slopes	485.07	0.2642
Drury silt loam, 2 to 5 percent slopes, rarely flooded	184.87	0.1007
Dumps, mine	182.06	0.0991
Edinburg silty clay loam, 0 to 2 percent slopes	553.59	0.3015
Elburn silt loam, 0 to 2 percent slopes	6.85	0.0037
Elco silt loam, 10 to 18 percent slopes	1291.32	0.7032
Elco silt loam, 10 to 18 percent slopes, eroded	2686.83	1.4632
Elco silt loam, 5 to 10 percent slopes, eroded	367.67	0.2002
Elco silty clay loam, 10 to 18 percent slopes, severely eroded	1206.11	0.6568
Elkhart silt loam, 5 to 10 percent slopes, eroded	161.87	0.0882
Fayette silt loam, 10 to 18 percent slopes, eroded	69.67	0.0379
Fayette silt loam, 5 to 10 percent slopes, eroded	2923.10	1.5919
Fayette silty clay loam, 10 to 18 percent slopes, severely eroded	8.12	0.0044
Harrison silt loam, 2 to 5 percent slopes	51.26	0.0279
Harrison silt loam, 5 to 10 percent slopes, eroded	3835.02	2.0885
Hartsburg silty clay loam	910.51	0.4958
Hartsburg silty clay loam, 0 to 2 percent slopes	4806.44	2.6175
Hickory clay loam, 10 to 18 percent slopes, severely eroded	95.72	0.0521
Hickory loam, 10 to 18 percent slopes, eroded	287.56	0.1566
Hickory silt loam, 10 to 18 percent slopes	251.12	0.1368
Hickory silt loam, 18 to 35 percent slopes	758.62	0.4131
Huntsville silt loam, 0 to 2 percent slopes, frequently flooded	17.61	0.0096
Ipava silt loam, 0 to 2 percent slopes	65834.49	35.8525
Ipava silt loam, 2 to 5 percent slopes	316.88	0.1726
Keller silt loam, 2 to 5 percent slopes	32.23	0.0175
Kendall silt loam, 0 to 2 percent slopes, rarely flooded	162.23	0.0884
Keomah silt loam, 0 to 2 percent slopes	2618.66	1.4261
Landfills	49.61	0.0270
Lawson silt loam	15.47	0.0084
Lawson silt loam, 0 to 2 percent slopes, frequently flooded	2559.12	1.3937

Description	Acres	Percent
Marseilles silt loam, 35 to 60 percent slopes	121.86	0.0664
Navlys silt loam, 10 to 18 percent slopes, eroded	14.85	0.0081
Navlys silt loam, 5 to 10 percent slopes, eroded	169.58	0.0924
Navlys silty clay loam, 10 to 18 percent slopes, severely eroded	9.34	0.0051
Orthents, silty, rolling	37.70	0.0205
Oscos silt loam, 2 to 5 percent slopes	15188.19	8.2713
Oscos silt loam, 5 to 10 percent slopes, eroded	667.65	0.3636
Plano silt loam, 2 to 5 percent slopes	14.56	0.0079
Proctor silt loam, 0 to 2 percent slopes, rarely flooded	296.74	0.1616
Radford silt loam, 0 to 2 percent slopes, frequently flooded	1629.18	0.8872
Rozetta silt loam, 2 to 5 percent slopes	7125.47	3.8804
Sable silty clay loam	3269.27	1.7804
Sable silty clay loam, 0 to 2 percent slopes	10750.66	5.8547
Sawmill silty clay loam, 0 to 2 percent slopes, frequently flooded	2835.69	1.5443
Shiloh silty clay loam, 0 to 2 percent slopes	145.12	0.0790
Spaulding silty clay loam, 0 to 2 percent slopes	155.12	0.0845
Tama silt loam, 2 to 5 percent slopes	763.91	0.4160
Tama silt loam, 5 to 10 percent slopes, eroded	149.47	0.0814
Tice silty clay loam, 0 to 2 percent slopes, frequently flooded	859.56	0.4681
Urban land	536.00	0.2919
Vesser silt loam, 0 to 2 percent slopes, occasionally flooded	32.95	0.0179
Viriden silty clay loam	1011.16	0.5507
Viriden silty clay loam, 0 to 2 percent slopes	27787.86	15.1329
Water	4551.09	2.4785
Worthen silt loam, 0 to 2 percent slopes, rarely flooded	93.85	0.0511
Zook silty clay loam, 0 to 2 percent slopes, frequently flooded	35.94	0.0196
Grand Total	183625.93	100.0000

Appendix B
Historical Water Quality Data

Segment	Station	Date	Time	Parameter	Type	Result	Units	Depth
Sugar Creek	5576190	1980-03-31	17:00	Boron		30	µg/L	
Sugar Creek	5576190	1980-08-11	17:30	Boron		250	µg/L	
Sugar Creek	5576190	1980-11-17	14:15	Boron		290	µg/L	
Sugar Creek	5576190	1981-05-14	13:30	Boron		50	µg/L	
Sugar Creek	5576250	1980-01-17	10:00	Boron	Total Recoverable	650	µg/L	
Sugar Creek	5576250	1980-02-07	10:00	Boron	Total	550	µg/L

Client:	Illinois EPA	Job No.:		Computed By:	Brian Bennett
Project:	TMDL Lake Springfield	Dated/Checked:		Date:	10/29/2015
Calculations:	Total Phosphorus Loads	Checked By:		Page No.:	

References:

1. "Illinois EPA Total Maximum Daily Load - Rend Lake Watershed" prepared by CDM Smith, 2014
2. USEPA PLOAD Version 3.0 User's Manual dated January 2001
3. USGS Fact Sheet FS-195-97: "Unit-Area Loads of Suspended Sediment, Suspended Solid, And Total Phosphorus From Small Watersheds in Wisconsin" prepared by Corsi, Graczik, Owens, and Bannerman

Methodology:

Rend Lake Watershed is predominantly pasture and forest. (Reference 1, pg. 2-1)
Therefore, the export coefficient method described on Page 3 of Reference 2 is used to calculate median total phosphorus loads.

The minimum and maximum phosphorus loads are calculated using the procedure described in "Estimating Loads" section of Reference 3.

1. Calculate Median Total Phosphorus Load**Assumptions:**

Export coefficients per land use (lb/ac/yr) are given in Appendix IV of Reference 2. The export coefficients for the Wisconsin area located in Appendix IV are most appropriate for the Lake Springfield watershed due to similar climate characteristics, coefficient ranges from other regions listed in the reference material were included as needed. The land use distribution for Lake Springfield watershed is provided in the Stage 1 TMDL report. Export coefficients were assumed for the Lake Springfield Land Use categories that are not listed in the Wisconsin categories.

REF-01 Watershed Information	Area (acres)	Total Phosphorus Export Coefficients			Phosphorus Loads		
		High* (lb/ac/yr)	Low* (lb/ac/yr)	High (lbs/yr)	Low (lbs/yr)	Average/Median (lbs/yr)

TOTAL	159,109			126,183	116,156	121,169	

* Export coefficient values listed in Appendix IV are MEDIAN values. The ranges for each land use are assumed.

Results:

The export coefficient values listed in Appendix IV of Reference 2 are median values. Therefore, the range calculated with this method is a range for the median, rather than a range between the minimum and maximum loads. The results show that the Rend Lake watershed median Phosphorus load ranges between 116,500 and 157,000 lb/yr.

Trib Name	Trib Area (acres)	Percent of Total	Trib Flow (mil m ³ /yr)	Trib Concentration (lbs/yr)	Trib Concentration (ug/L)

Appendix E

Responsiveness Summary

Responsiveness Summary

Lake Springfield and Sugar Creek Watershed Total Maximum Daily Load

This responsiveness summary responds to substantive questions and comments received during the first public comment period from March 27, 2014 through April 28, 2014 postmarked, including those from the second public meeting from March 27, 2017 through April 8, 2017 post marked, is discussed below.

What is a TMDL?

A Total Maximum Daily Load (TMDL) is the sum of the allowable amount of a pollutant that a water body can receive from all contributing sources and still meet water quality standards or designated uses. The **Lake Springfield and Sugar Creek TMDL Watershed** report contains a plan detailing the actions necessary to reduce pollutant loads to the impaired water bodies and ensure compliance with applicable water quality standards. The Illinois EPA implements the TMDL program in accordance with Section 303(d) of the federal Clean Water Act and regulations there under.

Background

The **Lake Springfield and Sugar Creek TMDL Watershed** is located in Central Illinois in Sangamon, Morgan, and Macoupin Counties. There are three waterbody segments and one lake that have TMDL/LRS allocations developed. The Clean Water Act and USEPA regulations require that states develop TMDLs for waters on the Section 303(d) List. Illinois EPA is currently developing TMDLs for pollutants that have numeric water quality standards and for waterbody segments that do not have water quality standards and at this time Illinois EPA has developed a load reduction strategy. The lake is impaired mainly due to elevated levels of phosphorus and total suspended solids and a TMDL has been developed for total phosphorus. The streams are impaired due to total phosphorus, total suspended solids, sedimentation and siltation.

Public Meetings

The first public meeting was held at Lincoln Land Community College (Trutter Center), 5250 Shepherd Road, Springfield, Illinois on March 27, 2014 at 3:00pm. All comments from the first public meeting have been incorporated into the final draft report. An additional public meeting was held at Lake Springfield Beach House, 240 Long Bay Drive, Springfield, Illinois, on March 7, 2017. There were approximately 40 attendees at the second public meeting and the meeting record remained open until midnight, April 8, 2017. The Illinois EPA provided public notice for all meetings. This notice gave the date, time, location, and purpose of the meeting. The notice also provided references to obtain additional information about this specific site, the TMDL Program and other related issues. The draft TMDL Report was available for review at the Village of Chatham Public Library, the Village of Auburn Public Library, and City Water Light & Power (CWLP) – Property Management Center (200 East Lake Shore Drive) during business hours, and also on the Agency's web page at <http://www.epa.state.il.us/water/tmdl>. The public review comments and the responses are presented below:

Questions & Comments

1. Loading from septic systems are not quantified; please revise report to include a realistic estimate of the loading from the estimated 1500 systems in the watershed.

Response

Based on information from Springfield CWLP a total of 431 septic systems exist near the margins of Lake Springfield (CWLP) as discussed in Section 5.4.3 of the draft final TMDL report -Typical TP loads for residential septic systems are cited in the literature as approximately 1-2.7 g/person/year (USEPA 2002). This equates to an estimated 3.8-10.3 lbs/day (Median of 7.0 lbs/day) of total phosphorus entering the Lake from septic systems, which is implicitly included in the LA. Additional text has been added in Section 7.2.1 to clarify potential septic loads.

No verified data is available regarding the estimated number of septic systems throughout the watershed (1500 - source unverified), however, the geographic range of influence for TP loads from septic systems is typically considered quite small with TP loads not extending more than a few hundred feet from the source (USEPA 2002). Often only failing systems are included as sources of TP, but little data exist on failing systems within proximity of the lake. Estimates included in the TMDL study is based on all the septic systems reported to be in relative proximity to the lake.

2. Since a septic tank is an end-of-pipe pollution control device for distributing the effluent, please explain why the State of Illinois does not require NPDES permits. Why doesn't IEPA require all systems around the lake perimeter (especially the open systems) to discharge into the SMSD system?

Response

The Illinois Department of Public Health administers the septic system permitting process that serves individual home/business, and the discharge from such facilities are covered under the Septic System General Permit administered by USEPA.

The Sangamon County Water Reclamation District (SCWRD) and the Springfield CWLP have ongoing programs in-place to eliminate septic systems around Lake Springfield. Each entity provides a maximum of \$5,000 towards the installation of a private septic tank effluent pump (STEP) system to pump sanitary sewage from septic systems serving individual homes and businesses to SCWRD collection system in proximity to Lake Springfield. As of April 2014, there are 27 individual private septic tank effluent pumps that have been installed or permitted for installation under this program.

3. Revise Tables showing costs of proposed BMP's to show both initial costs and annual maintenance costs.

Response

Maintenance costs are highly variable based on selected BMP and specific application. Maintenance is discussed in the implementation plan where applicable. The Tables in Section 9 of the report show cost/payment schedule per EQIP or other program guidelines. Additional cost clarification has been added to Section 9.12

4. Proposed monitoring appears to fall far short of what is needed to support the adaptive management strategy that is proposed. Provide evidence in final draft that the proposed monitoring plan will provide sufficient data on system response, to inform successive management actions.

Response

As watershed based plans are developed, monitoring becomes an integral part of the project. The watershed workgroup in consultation with IEPA will determine further monitoring needs to gather information before and after implementation plans to support and make decisions for adaptive management strategies.

5. 8.3.1.4 CWLP has told regulators in 401/404 permit applications and EIS documents that water will be transferred from Hunter Lake to Lake Springfield when water levels drop only 1 foot or less below full pool. Explain what impacts such pumping scenarios would have on the narrative and results of this TMDL document.

Response

The estimate for the volume of water transferred from a proposed Hunter Lake to Lake Springfield was provided by the Springfield CWLP and is included in the load capacity analysis. The proposed lake is expected to meet 0.05 mg/L TP WQS for lakes which was used to model the TP load. The impact of the one-foot or less below full pool transfer is inherent to the volume estimates provided. Any additional possible impact of this pumping on the Lake Springfield modeling inputs are not expected to be significant on the temporal scale of the model output.

6. 8.3.1.5 Why are phosphorus discharges from POTWs not monitored. Why doesn't IEPA require it?

Response

Illinois EPA continues to include TP monitoring requirements for major facilities (1.0 MGD and above) and for facilities that discharge to phosphorus impaired waterbody segments upon renewal of the NPDES permit. Currently the Agency doesn't require minor facilities not discharging to a TP impaired waterbody to monitor. However, the Agency does encourage such monitoring for future data needs and will require monitoring for the facilities covered in the TMDL during the next NPDES permit renewal.

7. 8.3.2.3 Please provide scientific basis for 19 mg/l target.

Response

As part of the TMDL development process the Agency started to include Load Reduction Strategy (LRS) in TMDL watershed projects since 2012 for those pollutants that currently do not have numeric water quality standards. Developing an LRS involves determining the loading capacity and load reduction necessary that is needed for the water body to meet “**Full Use Support**” for its designated uses. The load capacity is not divided into WLA, LA, or MOS, these are represented by one number as a target concentration for load reduction within each unique watershed. The LRS for this watershed is only for two parameters (Total Phosphorus and Total Suspended Solids); all other parameters such as Sedimentation/Siltation and Turbidity will be addressed separately. The Load Reduction Strategy provides guidance (with no regulatory requirements) for voluntary nonpoint source reduction efforts by implementing agricultural and urban stormwater best management practices (BMPs).

The Load Reduction Strategy target of 19 mg/L was derived from stream segments that fully supported their designated uses (data 1999 through 2013). This includes data from the Illinois EPA’s Surface Water Section’s ambient monitoring, intensive basin surveys, and special studies. The pollutants (or parameters) for which data were compiled are Total Phosphorus (TP), and Total Suspended Solids (TSS).

Mathematical operations were kept to a minimum in-order to establish targets which are as accurate and relevant as possible to help stakeholders with target endpoints when developing watershed plans and BMPs in the watershed.

This data underwent a quality control check and carefully discriminated against any data that did not pass all the rigorous quality assurance checks. Only the data that passed all checks was used to calculate the targets in this strategy.

8. 8.3.5 Please provide evidence supporting the assertion “...likely result in elimination of excess algae growth in the lake”, and the baseline from which excess would be measured.

Response

Text has been added to clarify Section 8.3.5.

9. Section 9.5. Explain more clearly how phosphorus loads from internal cycling can be reduced to the required extent.

Response

Text has been added to clarify Section 9.6.2.

10. Section 9.6.1 In the final version, include commitment to require P monitoring from all point sources, or explain why such a commitment is not being made.

Response

Please refer to response #6 above.

Text has been added to clarify Section 9.6.1. to strengthen the recommendation, that requirements for NPDES permits must be addressed by the Agency's DWPC/Permit Section upon NPDES Permit renewal.

11. Section 9.9. The actions taken during the last few decades have utterly failed to significantly improve water quality. Citing such actions fails to provide reasonable assurance of future compliance. In the final draft, please provide information on actual commitments that extend into the future (e.g. expiration dates for each of the grants, subsidies, and CREP and other contracts that were cited). Quantify the extent to which past trends would need to be scaled up in-order to reach target reductions.

Response

Text has been added in Section 9.9. – directing the reader to Lake Springfield Watershed Management Plan for more details.

12. Section 9.9. Simply citing activities conducted in the past proves nothing. To lend credibility to the estimated costs of future actions, the costs of all past actions cited should also be provided.

Response

Documenting past activities and success stories helps watershed workgroups to take adaptive management approach for future projects. Text has been added in Section 9.9. - directing the reader to Lake Springfield Watershed Management Plan for more details.

13. Section. 9.9 This entire section implies that the cost of compliance should fall primarily on the taxpayers, not on the lake owner. In the final draft please clarify that State of Illinois has the power to enact legislation to control agricultural runoff, but has failed to do so. Also, clarify that the lake owner has the power to increase water rates to dredge the lake and to operate a maintenance program that removes sediment that enters the lake.

Response

Text has been added regarding CWLPs funding potential as lake owners to Section 9.11.

14. Section 9.13.3. Does the City intend to make an actual commitment to meeting the 10 and 25 year milestones?

Response

The forthcoming Lake Springfield Watershed Management Plan will provide detail on projects and parties involved and will demonstrate the local commitment for addressing water quality issues in the watershed.

15. We understand that the WLA of 0.31 lbs/day of TP assigned to the village of Chatham will be mandated, enforced as a special condition in the village's MS4 permit, and not a voluntary target or goal as with the majority of the watershed being agricultural and therefore exempt from this requirement.

Response

That is correct. The MS4 WLA will be referenced in the Special Condition language and therefore will be the permit limit.

16. Section 5.1.1.2 – Total phosphorus in Sugar Creek there is no numeric water quality standard (WQS) for TP for streams in Illinois. IEPA set a target of 0.739 mg/L for the Lake Springfield watershed because the WQS for reservoirs is 0.05 mg/L. How can a mandated TP concentration be imposed on Chatham when there is no rule promulgated by the Illinois Pollution Control Board regulating TP in streams?

Response

The WLA for TP applied to the MS4 permit for the Village of Chatham is a result of the MS4 system discharging to Lake Springfield and/or its tributaries and is intended to address the in-lake numeric WQS of 0.05 mg/L for TP and not the LRS target value for TP in streams.

17. We disagree with the conclusion that there were no data gaps in the Stage 1 report.

Response

The TMDL consultant who has significant experience in developing USEPA approved TMDLs has evaluated all relevant information for the TMDL study and concluded that sufficient data was available to run the models.

18. It is not evident in the report that testing was performed immediately upstream or downstream of the village corporate limits to properly assess a WLA for TP specific to the watershed within the village.

Response

Testing or sampling was not performed at locations upstream or downstream of the municipal boundary. As discussed in the report, allocations for MS4 permits were calculated as a proportion of the contributing watershed included within the municipal boundary.

19. Considering the burdensome implications of imposing the 0.31 lbs/day TP WLA on Chatham, we believe a more detailed study should be performed that includes TP data collection within the Chatham portion of the Lake Springfield watershed to better calibrate the BATHTUB model.

Response

Such a study would lend confidence to the BATHTUB calibration; however, the collection of sufficient data would require a significant effort with involving sampling under a variety of flow conditions at various times of year. A study of this nature is beyond the current scope of this TMDL project, but may be beneficial as a precursor to any changes to the Village of Chatham's MS4 General Permit monitoring program.

20. We object to the TMDL calculations that provide a reserve capacity for an additional 5.8 lbs/day coming into Lake Springfield from the proposed Hunter Lake. Any additional phosphorus loading to the lake would be an aggravation of pollution already in the lake and is not allowed under the Clean Water Act which forbids issuance of NPDES permits that fail to ensure compliance with water quality standards. *Illinois EPA v. Illinois Pollution Control Board*, 386 Ill. App. 3d 375 (2008), *Ala. Dept. of Env. Mgmt. v. Ala. Rivers Alliance, Inc.*, 14 So. 3d 853, 864, 866–68 (Ala. Civ. App. 2007)
Proposing a source of new phosphorus pollution to the lake makes no sense when the draft TMDL states both an 86% decrease in internal phosphorus loading in the lake and a 96% reduction in external phosphorus loading are needed if the phosphorus water quality standard is to be met.

Response

USEPA directs IEPA to include Reserve Capacity in load capacity analysis where potential new sources are known, in-order to account for future potential contributions from point sources (new and expanded plants). The proposed Hunter Lake diversion project does not meet the traditional definition of a wastewater treatment plant improvement requiring an NPDES Permit, although the load would be considered a new source of phosphorus. The draft report is taking a conservative approach for including the TP load for future actions that may or may not happen. The TMDL report acknowledges this, and based on discussion with USEPA "reopener language" is included in the report. If the diversion project proceeds the TMDL may be reopened to recalculate the load capacity analysis should the load contribution from the project is higher than the original estimated load (please refer to Section 8.3.1.4 – Reserve Capacity).

21. We also do understand why the proposed TMDL calls for no reductions in phosphorus loading from wastewater treatment facilities contributory to the lake. This makes no sense when the aim of the TMDL is to also reduce aquatic algae in the lake. As Table 8-2 identifies, loading from wastewater treatment facilities is likely to be a high source of phosphorus under low flow conditions. It is summer low flow months when algal growth is likely to be highest. Relying solely on phosphorus reductions from non-point sources is likely to be of little help in reducing summer algae blooms. Reductions in phosphorus from

wastewater treatment facilities will be needed. The final TMDL should take this seasonal factor into account in considering the necessary load reductions.

Failure to require reductions from wastewater treatment facilities clearly renders the TMDL incapable of providing reasonable and is an improper wasteload allocation. 40 CFR §§130.2 (i), 130.7. *Am. Farm Bureau Fed'n v. United States EPA*, 792 F.3d 281 (3d Cir. 2015)

Response

In-order to estimate total phosphorus loading for each POTW, the average total phosphorus concentration from all wastewater treatment plants (WWTP) was calculated for all available effluent data in the watershed. Based on a review of effluent data from similar WWTPs in the region, the estimated effluent concentration of 2.425 mg/L input into the model for each WWTP is within a reasonable range of expected phosphorus concentrations from small treatment plants particularly lagoon systems. During the next cycle of NPDES Permit renewal, the Agency will require NPDES Permittees to monitor for total phosphorus. If the wastewater treatment plants are not able to meet the concentration and the WLA, Permittees will be required to install additional treatment or modify their existing treatment process.

22. We disagree with the approach the Agency has taken to set a target phosphorus level for Sugar Creek. As we understand from the discussion on this topic at the March 7, 2017 public meeting, the Agency developed the number of 0.739 mg/L phosphorus by taking the average of the levels of phosphorus from unimpaired streams nearby. This approach is problematic for a number of reasons. First if any measurements were taken in nearby streams after a storm event, the values you included in your calculations likely contain results with atypically high phosphorus levels. The median value would be a much better number to use. The value the Agency obtained is much higher than either the median (0.200 mg/L phosphorus) or average (0.379 mg/L phosphorus) level of phosphorus that the Illinois EPA calculated for all streams in Illinois. See Table 3-1 in IEPA/BOW/99-020 report *Baseline Loading of Nitrogen, Phosphorus, and Sediments from Illinois Watersheds* (Find at www.epa.state.il.us/water/water-quality/baseline-load-report-final-1999.pdf) Further, it is doubtful that adequate monitoring would confirm that these nearby waters are actually unimpaired.

In addition, the number is significantly higher than water quality standards for phosphorus in streams that have been adopted by other states in the Midwest. Wisconsin has adopted standards of 0.075 mg/L phosphorus for streams and 0.1 mg/L phosphorus for rivers. (See http://docs.legis.wisconsin.gov/code/admin_code/nr/100/102/) Minnesota has adopted a phosphorus standard of 0.15 mg/l for streams in the southern region of the state. (See <https://www.revisor.mn.gov/rules/?id=7050.0222>).

Response

Please refer to response No.7, as the methodology used in selecting the target number is similar. Illinois does not have water quality criteria for nutrients at the present time, and the proposed LRS target numbers are only recommended to be used as targets for voluntary planning and implementation activities until such time nutrient water quality criteria become available. The Illinois Nutrient Loss Reduction Strategy – Science Advisory Board is working on developing nutrient criteria (report expected early 2018).

23. We understand that the Sangamon Soil & Water Conservation District (SWCD) is working with Northwater Consulting under a 319 grant to determine the most strategic places within the Lake Springfield watershed to install best management practices to reduce phosphorus and total suspended solids runoff. We applaud the work of the Sangamon SWCD and its partners in the Lake Springfield Watershed Project in developing the Lake. *Lake Springfield Watershed Management Plan*. However, it is the Agency's responsibility to make sure that the proposed TMDL meets the reasonable assurance requirement.

As described below, the TMDL must include a demonstration that the load allocations in the TMDL will be implemented:

Reasonable assurance. Reasonable assurance means that you demonstrate that each wasteload allocation and load allocation in a TMDL will be implemented. For point sources regulated under section 402 of the Clean Water Act you must demonstrate reasonable assurance by procedures that ensure that enforceable National Pollutant Discharge Elimination System (NPDES) permits (including coverage to individual sources under a general NPDES permit) will be issued expeditiously to implement applicable wasteload allocations for point sources. For nonpoint sources, you must demonstrate reasonable assurance by specific procedures and mechanisms that ensure load allocations for nonpoint sources will be implemented for that waterbody. Specific procedures and mechanisms for nonpoint sources must apply to the pollutant for which the TMDL is being established, must be implemented expeditiously and must be supported by adequate funding. Examples of specific procedures and mechanisms which may provide reasonable assurance for nonpoint sources include State, Territorial, and authorized Tribal regulations, local ordinances, performance bonds, contracts, cost-share agreements, memorandums of understanding, site-specific or watershed-specific voluntary actions, and compliance audits of best management practices.

(See <https://www3.epa.gov/region6/water/npdes/tmdl/definitions.htm>)

Section 9 provides a good history of management efforts undertaken in the watershed and lists of many practices that could be undertaken to reduce pollution, but fails to include the procedures and mechanisms described above that are needed to provide reasonable assurance that the TMDL will be implemented. The Agency should work with the members of the Lake Springfield group to develop the required assurances before the TMDL is finalized.

Response

We agree, USEPA requires reasonable assurance that TMDLs will be achieved and WQS will be met. Reasonable assurance that the WLAs will be implemented is provided by regulatory actions. Per 40 CFR 122.44(d) (1) (vii) (B), NPDES permit effluent limits must be consistent with assumptions and requirements of all WLAs in an approved TMDL. IEPA implements its Municipal Separate Storm Sewer (MS4) and NPDES permit programs and is responsible for making the effluent limits consistent with the WLAs in the TMDL. Effluent from wastewater treatment plants and in-stream monitoring (as required by NPDES Permit) is reported to IEPA and should provide reasonable assurance that WQS will be met.

In addition, the Sangamon County Water Reclamation District is expanding its Sugar Creek Water Reclamation Plant that discharges to Sugar Creek downstream of Lake Springfield, to include Biological Nutrient Removal Treatment Process and upon completion of the expansion the plant will be discharging less phosphorus than the current level being discharged to the receiving stream.

As to compliance with the load allocation, this is a voluntary program, and the Agency is confident in the successful completion and future implementation of Lake Springfield Watershed Management Plan to provide Reasonable Assurance that the Load Allocation will be achieved. The past success of the watershed group supports this approach, and the Agency is encouraging stakeholders to take advantage of Section 319 cost-share funding program and other available resources to implement best management practices (BMPs) identified in the Implementation Plan.
