Springfield, IL 62794-9276

October 27, 2017

Mr. Haile,

I would like to thank you and your staff and also CDM Smith for the time and efforts putting together the Draft Report for the Little Vermilion River watershed.

After your presentation at the public meeting on September 27th, I have complied some concerns and/or comments that were given to me after the meeting.

1. The Little Vermilion River is of utmost importance. Would like to see more focus on Best Management Practices for the slag pile and the river. Along, with the BMP's possibly incorporate some long-term testing procedures, for aquatic life; such as fish, plants, and microorganisms in the river. Also, recommend long-term testing for zinc within the river.
2. Can there be fixed, possibly permanent testing sites for the LVR? Perhaps beginning at the mouth of the LVR and then moving northward and having sites all the way up to Mendota Creek. Where ever it is convenient to place the testing sites, for example, every few miles that have a convenient access to test the stream. To study, the aquatic life, plants, microorganisms, as well as, fecal coliform and other pollutants within the stream. The contrast of what is north of the slag pile verses south of the slag pile.
3. That zinc mining was not taking place at the M & H site, rather zinc smelting was.
4. Better reclamation plans for open pit mines within the Little Vermilion River watershed. More native plantings, grasses, trees, and shrubs.
 - a. Reclamation plans such as the plans for strip mining, which are much more rigorous than open pit mining, need to be in place for the open pit mines. The reclamation laws for open pit mining are outdated and should be patterned after the reclamation laws of strip mining.
5. Have buffers be mandatory for everyone who has property on a tributary of the Little Vermilion River, as well as, the LVR itself. More local, county, state laws for buffers to be required.
6. Tanks at the M & H site contained sulfuric acid. Concerns with the tanks leaking acid and leaching into the soil and into the LVR.

Thank you for hearing the concerns that have been voiced. Please feel free to contact me with any questions that you may have.

Topic – Comment of Draft
Little Vermilion River (LaSalle County)
Total Maximum Daily Load (TMDL)
Impairments – on Segments – DR – 01, DRD

Dear Sirs:

Thank you for your presentations of the Draft Report on the Little Vermilion River (LaSalle County) by CDM Smith on September 27, 2017 at the LaSalle Library. Enclosed are some suggestions for your consideration.

Section 1 Figure 1-1

Add future test sites between points DR01 – DRD.

The concentration of water testing at the North site of Mendota DRD and the Southern site of LaSalle DR01 leaves miles (20+) of agricultural and mining/quarrying operations adjacent to the river not tested. The agricultural operations and herd grazing generate phosphorous and the potential for fecal coliform. The mining and quarry operations and river bank erosion adds to TSS.

Section 1 Table 1-1

Add to the potential source box the following:

In segment DR01, TSS add mining and quarrying

Fecal Coliform add septic systems and herd grazing

TSS

It is remarkable the mining and quarry operations are not mentioned since large tracts of land are in active operation with reserve acres owned for future growth. At least three corporations are active. We appreciate these corporations while recognizing that they alter the landscape and operate adjacent to the river. Some have had operational mishaps with mining/quarry sludge that escaped to the river which smothered aquatic life.

Fecal Coliform

Between Mendota DRD and LaSalle DR01 there are many rural residential septic systems along the river. Also, Troy Grove is without a sewer system. The City of LaSalle has an old broken sewer system across the M & H Zinc site.

Herd grazing occurs along the water shed.

Adding fecal coliform testing sites between the two sites may help define and address the fecal coliform levels. The DR01 testing segment of the river is south of I80. The upstream data is not known. Perhaps test sites between the two (DRD and DR01) could help identify potential sources.

Section 4 Table 4-2

Consider adding to the potential source box:

TSS - mining and quarrying and riparian erosion

Fecal Coliform – home septic systems and herd grazing

Section 5

5.1.1.1 Zinc Table 5 - 1 and Figure 5 – 2

The measurement on the Table for zinc are micrograms per liter.

The measurement on the Figure for zinc is in milligrams per liter.

Please adjust and review the Figure 5.2 so that it correctly reflects the acute and chronic standards for zinc in streams that are hardness dependent.

Section 8

Table 8-2 in the box of Potential sources for zinc remove mining replace with smelting. Zinc was never mined in LaSalle County.

Section 9

Implementation Plan for the Little Vermilion River Watershed with the BMP recommendations contains many good concepts.

9.9.1 & 9.9.2

Please note zinc ore (ZnS) was not mined in LaSalle County. M & H Zinc converted imported zinc sulfide to zinc oxide and to elemental zinc. Most of the zinc present at the M & H Zinc smelter site is not in the form of zinc sulfide. M & H Zinc was a smelting and rolling operation.

Please consider an additional segment to Section 9 to include a legislative initiative to put into local, county, state and federal regulations a defined measure for riparian setbacks from the stream. Also, upgrading of reclamation standards in mining and quarrying operations to enhance the environment.

i.e. Quarry operations remove 150-year-old oak trees and replace with nonnative grasses. The amount of mining and quarrying along the Little Vermilion River is significant. Future reclamation/development would also be enhanced.

Respectively,

A handwritten signature in cursive script that reads "Cynthia Carus". The signature is written in dark ink and is positioned above the printed name.

Appendix F

Responsiveness Summary

Responsiveness Summary

Little Vermilion River (LaSalle County) Watershed

Total Maximum Daily Load

The responsiveness summary responds to any questions and comments received during the public comment period from September 27, 2017, through October 27, 2017.

What is a TMDL?

A Total Maximum Daily Load (TMDL) is the sum of the allowable amount of a pollutant that a water body can receive from all contributing sources and still meet water quality standards or designated uses. **The Little Vermilion River (LaSalle County) Watershed** TMDL report contains a plan detailing the actions necessary to reduce pollutant loads to the impaired water bodies and ensure compliance with applicable water quality standards. The Illinois EPA implements the TMDL program in accordance with Section 303(d) of the federal Clean Water Act and regulations thereunder.

Background

The watershed targeted for TMDL development is **Little Vermilion River (LaSalle County) Watershed** located in north-central Illinois, flows in a southerly direction, and drains just over 80,000 acres. Most of the watershed (99.5 percent of land area or 80,054 acres) lies within La Salle County. A very small portion of the watershed (362 acres) lies within Bureau County.

The Clean Water Act and USEPA regulations require that states develop TMDLs for waters on the Section 303(d) List. Illinois EPA is currently developing TMDLs for pollutants that have numeric water quality standards. Therefore, Chloride, Zinc, and Fecal Coliform TMDLs were developed for Little Vermilion River, stream segment (DR-01) listed as impaired per the *Draft Illinois Integrated Water Quality Report and Section 303(d) List-2016*.

In addition, a Load Reduction Strategy (LRS) was developed for pollutant(s) that do not have numeric water quality standard. These include Total Phosphorus and Total Suspended Solids for Little Vermilion River (stream segment DR-01) and Total Phosphorus for Mendota Creek (stream segment DRD).

Illinois EPA contracted with CDM Smith (TMDL Consultant) to prepare the TMDL report for the Little Vermilion River (LaSalle County) Watershed.

Public Meetings

The draft Stage One public meeting was held on September 11, 2014, at LaSalle Public Library LaSalle, Illinois and the draft Stage 3 public meeting was held on September 27, 2017, at the same location. Illinois EPA provided public notice for both meetings by placing display ads in LaSalle News Tribune (local newspaper). In addition, a direct mailing was sent to several stakeholders/Permittees in the watershed. These notices gave the date, time, location, and purpose of the meeting. The notice also provided references on how to obtain additional information about this specific site, the TMDL program, and other related information. The draft TMDL report was available for review at LaSalle Public Library, Mendota City Hall, and on the Agency's webpage: www.epa.illinois.gov/public-notices/index.

The Stage 3 public meeting started at 1:00 p.m. on Wednesday, September 27, 2017. It was attended by approximately 14 people and concluded at 3:00 p.m., with the meeting record remaining open until midnight, October 27, 2017.

Questions & Comments

1. The Little Vermilion River (LVR) is of utmost importance. Would like to see more focus on Best Management Practices for the slag pile and the river. Along with the BMP's possibly incorporate some long-term testing procedures, for aquatic life; such as fish, plants, and microorganisms in the river. Also, recommend long-term testing for zinc within the river.

Response: As part of the Implementation Plan, the BMPs outlined in Section 9.9.2 of the report, such as filter strips, WASCObS, and streambank stabilization/erosion control practices are recommended to address the slag pile issues due potential nonpoint runoff. In addition, the Agency will continue its Ambient, Intensive Basin Survey, and other water quality monitoring programs in the watershed that also include zinc among other parameters.

2. Can there be fixed, possibly permanent testing sites for the LVR? Perhaps beginning at the mouth of the LVR and then moving northward and having sites all the way up to Mendota Creek. Where ever it is convenient to place the testing sites, for example, every few miles that have a convenient access to test the stream. To study, the aquatic life, plants, microorganisms, as well as, fecal coliform and other pollutants within the stream, to contrast the results of what is north of the slag pile verses south of the slag pile.

Response: We agree with the suggested comprehensive approach, and as resources become available the Agency will consider expanding the water quality monitoring programs specifically adding more Ambient Water Quality Monitoring Stations in the watershed.

3. That zinc mining was not taking place at the M & H site, rather zinc smelting was.

Response: This has been corrected in the report.

4. Better Reclamation Plans, such as the plans for strip mining for open pit mines, which are much more rigorous than open pit mining, need to be in place for the open pit mine within the Little Vermilion River watershed. The reclamation laws for open pit mining are outdated and should be patterned after the reclamation laws of strip mining. In addition, more native plantings, grasses, trees, and shrubs should be considered.

Response: References to the open pit mines and native planting has been added to the implementation plan (see Page 9-32). Updating reclamation laws is outside of the scope of this TMDL report.

5. Have buffers be mandatory for everyone who has property on a tributary of the Little Vermilion River, as well as, the LVR itself. More local, county, state laws for buffers to be required.

Response: The watershed implementation plan includes riparian buffers as one of the BMPs to address water quality issues in the watershed. The BMPs are voluntary measures and stakeholders are encouraged to take advantage of the various cost-share funding programs listed in the report. Illinois EPA has no authority to mandate NPS pollution or associated BMPs.

6. Tanks at the M & H site contained sulfuric acid. Concerns with the tanks leaking acid and leaching into the soil and into the LVR.

Response: This information was not added. The M&H site is being cleaned up under a separate USEPA program. This TMDL report focused on 303(d) listed impairments based on existing stream conditions.

7. Add future test sites between points DR-01 – DRD (see to Section 1, Fig 1-1). The concentration of water testing at the Northern site of Mendota DRD and the Southern site of LaSalle DR-01, leaves miles (20+) of agricultural and mining/quarrying operations adjacent to the river not tested. The agricultural operations and herd grazing generate phosphorus and the potential for fecal coliform. The mining and quarry operations and river bank erosion adds to TSS.

Response: See response to Comment #1. The following text was added (see page 9-54) - *Multiple stakeholders expressed the desire to add additional permanent monitoring stations along the Little Vermilion River to continue to monitor zinc concentrations and bacteria counts. Targeted monitoring could be focused on areas upstream and downstream of suspected contributors such as the known slag pile for zinc and unsewered areas and/or areas known to be used for grazing for fecal coliform.*

8. In Section 1, Table 1-1, add to the potential source in the box the following: for segment DR-01, TSS, mining, quarrying, fecal coliform, septic systems, and herd grazing.

Response: The information in Table 1-1 was taken from previous Draft Illinois Integrated Water Quality Reports that have been submitted to USEPA for approval, and the Agency's Bureau of Water/Surface Water Section makes the determination for the potential sources of impairments. The Agency will revisit this issue in the next cycle of the Draft Integrated report. Table 8-2 was updated to include additional sources and noted that sources were identified by the 303(d) list and stakeholder comments.

9. It is remarkable the mining and quarry operations are not mentioned since large tracts of land are in active operation with reserve acres owned for future growth. At least three corporations are active. We appreciate these corporations while recognizing that they alter the landscape and operate adjacent to the river. Some have had operational mishaps with mining/quarry sludge that escaped to the river which smothered aquatic life.

Response: Text was added to the landuse discussion in Section 2: *Public comments from watershed stakeholders indicated that a number of mining and quarrying operations are currently active in the area with reserve acres owned for future growth.* References to mining/quarry operations were also included in the implementation section and native planting was added per comment #4.

10. Between Mendota DRD and LaSalle DR-01 there are many rural residential septic systems along the river. Also, Troy Grove is without a sewer system. The City of LaSalle has an old broken sewer system across the M & H Zinc site.

Herd grazing occurs along the water shed. Adding fecal coliform testing sites between the two sites may help define and address the fecal coliform levels. The DR-01 testing segment of the river is south of [I]80. The upstream data is not known. Perhaps test sites between the two (DRD and DR-01) could help identify potential sources.

Response: Additional text was added in the point source and nonpoint source discussion. Sample text includes: *It should be noted that the main outfall for new LaSalle South WWTP discharges to the Illinois River downstream of this watershed, however, through public comment it was noted that an old/abandoned sewer line runs under the Matthiessen and Hegeler Zinc Company Site. Local stakeholders indicated this could be a potential source for fecal coliform.*

11. In Section 4, Table 4-2, consider adding to the potential source box the following:

TSS – mining, quarrying, and riparian erosion

Fecal Coliform — home septic systems and herd grazing

Response: Please refer to response in item # 8.

12. In Section 5.1.1.1. Table 5 - 1 and Figure 5-2, the measurement for zinc are micrograms per liter. The measurement on the Figure for zinc is in milligrams per liter. Please adjust and review the Figure 5.2 so that it correctly reflects the acute and chronic standards for zinc in streams that are hardness dependent.

Response: This has been corrected.

13. In Section 8, Table 8-2, in the box of potential sources for zinc remove mining replace with smelting. Zinc was never mined in LaSalle County.

Response: Please refer to response in item #8.

14. In Section 9.9.1 & 9.9.2 - Implementation Plan for the Little Vermilion River Watershed with the BMP recommendations contain many good concepts.

Please note zinc ore (ZnS) was not mined in LaSalle County. M & H Zinc converted imported zinc sulfide to zinc oxide and to elemental zinc. Most of the zinc present at the M & H Zinc smelter site is not in the form of zinc sulfide. M & H Zinc was a smelting and rolling operation.

Response: This information has been updated/incorporated.

15. Please consider an additional segment to Section 9 to include a legislative initiative to put into local, county, state and federal regulations a defined measure for riparian setbacks from the stream. Also, upgrading of reclamation standards in mining and quarrying operations to enhance the environment, i.e., quarry operations remove 150-year-old oak trees and replace with nonnative grasses. The amount of mining and quarrying along the Little Vermilion River is significant. Future reclamation/development would also be enhanced.

Response: Changing legislation is beyond the scope of this report. Thank you for documenting this need in your comments. The comments are included in the report and stakeholders can work on initiatives like this through their workgroup. Native planting has been added to the implementation section with discussion of mining/quarrying operations in the watershed.
