Annual Compliance Report, Calendar Year 2006 The Drinking Water Program: An Overview

Introduction

The United States Environmental Protection Agency (USEPA) established the Public Water System Supervision (PWSS) Program under the authority of the 1974 Safe Drinking Water Act (SDWA). Under the SDWA and the subsequent amendments, USEPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs)² and Maximum Residual Disinfectant Levels (MRDL's)³. For some regulations, EPA establishes treatment techniques (TT)⁴ in lieu of an MCL to control unacceptable levels of contaminants in water. The Agency also regulates how

often public water systems (PWSs)¹ monitor their water for contaminants and report the monitoring results to the states or USEPA. Generally, the larger the population served by a water system, the larger the number of samples collected and the more frequent the monitoring and reporting (M/R)⁵ requirements. In addition, USEPA requires Public Water Systems (PWSs) to monitor for unregulated contaminants to provide data for development of future regulations. Finally, USEPA requires PWSs to notify their consumers when they have violated these regulations. The 1996 Amendments to the SDWA require consumer notification to include a clear and understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation and the possibility of using alternative water supplies during the violation.

Annual State PWS Report

The purpose of this annual compliance report is to satisfy the requirement of Section 1414(c)(3) of the 1996 Amendments to the Safe Drinking Water Act (SDWA). States with national primary

enforcement authority are to prepare, make readily available to the public, and submit to the Administrator of the USEPA by July 1 of each year, an annual report on violations occurring during the previous calendar year of national primary drinking water regulations by public water systems.

Annual Compliance Report Background

Each quarter, the Illinois Environmental Protection Agency (Illinois EPA) submits data to the Federal Safe Drinking Water Information System (SDWIS/FED), an automated database maintained by USEPA. The data submitted include, but are not limited to, PWS inventory information, the incidences of violations of Maximum Contaminant Levels, Maximum Residual Disinfectant Levels, monitoring, and treatment technique violations; and information on enforcement activity related to these violations. This report provides the numbers of violations in each of six categories:

- Maximum Contaminant Level (MCL) violations
- Maximum Residual Disinfectant Level (MRDL) violations,
- Treatment Technique (TT) requirement violations,
- Significant violations of Monitoring and Reporting (M/R) requirement violations,
- Significant violations of the Consumer Notification requirements,
- And Violations of Variances and Exemptions.

Attached to this report as Appendix A is a listing for each contaminant regulated by the SDWA, the numbers of maximum contaminant level (MCL), maximum residual disinfectant level (MRDL), treatment technique (TT) and major monitoring and reporting (M/R) violations for each compliance period during calendar year 2006, the number of violations that were returned to compliance (RTC), and the number of systems incurring violations. Appendix B and Appendix C contain a detailed listing of public water systems with MCL, MRDL, or TT violations.

Variances and Exemptions

A PWS can be granted a “variance” from a primary drinking water regulation if the characteristics of the raw water sources reasonably available to the PWS do not allow the system to meet the MCL. To obtain a variance, the system must agree to install the best available technology, treatment techniques, or other means of limiting drinking water contamination that the Administrator finds are available (taking costs into account), and the state must find that the variance will not result in an unreasonable risk to public

health. The variance shall be reviewed not less than every 5 years to determine if the system remains eligible for the variance. During 2006, Illinois did not grant any variances.

A water system may also petition the state for an “exemption”. An exemption is permission not to meet an MCL or a treatment technique under certain conditions for a period of time. An exemption may be granted to give a water system additional time to make complicated and expensive modifications and improvements to the water treatment process so that compliance may be achieved in the shortest period of time. During 2006, Illinois did not grant any exemptions.

Public Water System Overview

In Illinois, oversight of PWSs is divided between the Illinois Environmental Protection Agency (Illinois EPA) and the Illinois Department of Public Health (Illinois DPH). Illinois EPA has been designated as the lead agency for primary enforcement authority and oversees the **community public water system (CWS)** program (these supplies that serve 15 or more year round service connections or 25 or more year round residents). During 2006, there were 1,789 CWS. Illinois DPH oversees the **non-community water systems**. Non-community systems include the **non-transient, non-community public water systems (NTNC)** that serve 25 or more of the same non-residents at least 180 days out of the year and include facilities such as day care centers, schools and factories. Illinois DPH also oversees the **transient non-community (TNC) public water systems** that serve 25 or more different nonresidents at least 60 days out of the year and include facilities such as campgrounds and highway rest areas. During 2006, there were 396 NTNC and 3,822 TNC. The remainder of this report will detail the CWS supplies and then, separately, address the non-community (NTNC/TNC) supplies.

Community Public Water Supplies

As previously mentioned, the Illinois EPA oversees the **CWS** program. A CWS is a PWS that serves 25 or more people year around and/or has 15 service connections. ◀ **Graph 1** depicts the breakdown of the 1,789 community water systems within Illinois with regard to their source of water. A total of 11,914,599 persons are served by those systems; 41 percent of that population is directly served from surface water systems.

Thirty-four percent of the population is served by purchased surface water, 2 percent by purchased ground water, and 23 percent by ground water systems. It is worth noting that although only 23 percent of the population is served by ground water; ground water systems comprise almost 58 percent (1,038 of the 1,789) of the total number of community water systems. The type of source water (ground, surface, or purchase) for a CWS will determine

monitoring, treatment, and operational requirements. For example, surface water systems are required to monitor turbidity, where ground water systems (that are not under the influence of surface water) are not. This requirement will impact compliance numbers as outlined later in this report.

CWS - Environmental Indicators

The Illinois EPA Safe Drinking Water Goal is for every Illinois public water system to provide water that is consistently safe to drink. As a part of its partnership agreement with USEPA, Illinois EPA measures the progress of the drinking water program with environmental indicators consisting of the percentage of persons served by community water systems that have not incurred violations of any acute MCL, chronic MCL, acute treatment technique, chronic treatment technique or public education requirement during the year. The environmental objective of the Illinois EPA is to increase the percentage of population served by CWS that receive drinking water with no short-term (acute) or long-term (chronic) adverse health effects to over 95 percent by the year 2008. The progress towards this objective is summarized below.

CWS - Environmental Indicator Progress

Safe drinking water should be free of contaminants that have the potential to cause either short term or long-term health effects. During calendar year 2006, the percentage of persons served by Illinois CWS that have been in effect for more than three years and that were compliant with all health requirements (MCL), treatment techniques (TT), or public education was **93.2** percent. Compliance efforts will continue to focus on minimizing the frequency and duration of excursions and the development of enforceable schedules for the implementation of corrective action plans to achieve sustained compliance.

◀ Graph 2

CWS Compliance Percentages

During calendar year 2006, the percentage of persons served by Illinois CWS that were compliant with all health requirements was 93.2 percent. This compliance percentage represents almost a one percentage point improvement from calendar year 2005 and reflects continued progress toward the goal of 95 percent. It is important that safe drinking water be free of contamination that has the potential to cause either short-term or long-term health effects.

CWS - Acute vs. Chronic Indicators

The contaminants fall into two groups according to the health effects that they cause:

<i>ACUTE</i>	<i>CHRONIC</i>
<p>Acute effects occur within hours or days of the time that a person consumes a contaminant. People can suffer acute health effects from almost any contaminant if they are exposed to extraordinarily high levels (as in the case of a spill). In drinking water, microbes, such as bacteria and viruses, are the contaminants with the greatest chance of reaching levels high enough to cause acute health effects. Most people's bodies can fight off these microbial contaminants the way they fight off germs; and these acute contaminants typically don't have permanent effects. Nonetheless, when high enough levels occur, they can make people ill, and can be dangerous or deadly for a person whose immune system is already weak due to HIV/AIDS, chemotherapy, steroid use, or another reason.</p>	<p>Chronic effects occur after people consume a contaminant at levels over EPA's safety standards for many years. USEPA develops the standards for chronic MCLs on the basis that a person may have an adverse health effect after consuming two liters of water daily over a 70-year lifetime. The drinking water contaminants that can have chronic effects are chemicals (such as disinfection by-products, solvents, and pesticides), radionuclides (such as radium), and minerals (such as arsenic). Examples of the chronic effects of drinking water contaminants are cancer, liver or kidney problems, or reproductive difficulties.</p>

Graph 3 (below) shows that **99.9** percent of the population served by Illinois CWS received drinking water in compliance with acute (short-term) health requirements, and **93.2** percent were in compliance with chronic (long-term) health requirements. It is important to note that most non-compliance was short in duration, and the potential for health risk was minimized through prompt corrective action by the water supplies. Supplies with microbial problems (bacterial or turbidity non-compliance) are required to issue boil orders when the violation occurs. Community water systems with acute MCLs were limited to five water systems.

Acute and Chronic Requirements (2006 data)
Percent of CWS Population Served Compliant with Health Records

ACUTE

CHRONIC

■ *Compliant* ■ *Non-compliant*

■ *Compliant* ■ *Non-Compliant*

CWS - Lead And Copper Compliance

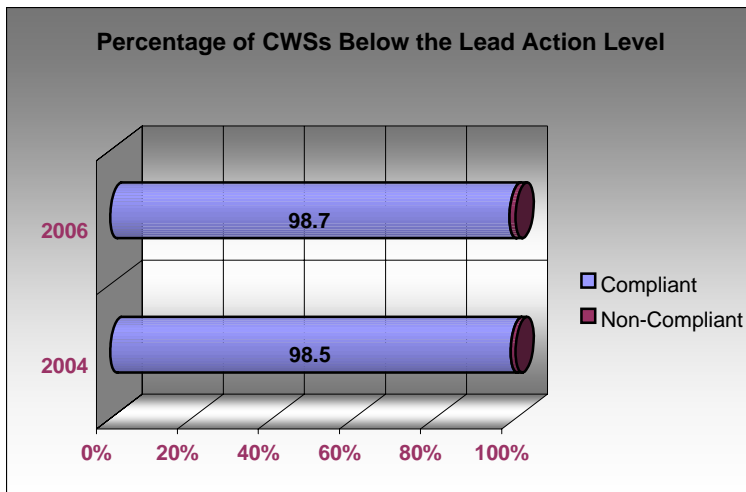

In 2006, 1,766 water supplies, or approximately **98.7** percent of community water supplies were below the lead action level. These water supplies serve **99.3** percent of the population. There were no treatment technique violations reported for the NTNC water systems overseen by the Illinois DPH.

Lead and Copper Rule Compliance

Lead and copper are regulated by a Treatment Technique that requires systems to control the corrosiveness of their water. The lead action level (15 parts per billion of lead) when exceeded in more than ten percent of the water samples collected in consumers' homes, requires the water supply to implement optimal corrosion control treatment plans or procedures which would prevent anticipated adverse health effects and ensure that lead or copper is controlled in the drinking water.

▼ **Graph 4** illustrates the Percentage of **Community** Water Systems that were below the lead action level.

During the years 2004 to 2006, a 0.2 percent net decrease in lead action level exceedances was seen in CWS. Generally, non-compliance is for a short period of time due to the fact the treatment is adjusted to the required ranges. Over *99 percent* of the population served by CWS consumed water that was compliant with lead action level during 2006.

CWS - Consumer Awareness

Every community water supplier must provide an annual report (sometimes called a Consumer Confidence Report or CCR) to its customers. The report provides information on local drinking water quality, including the water's source, the contaminants found in the water, and how consumers can get involved in protecting drinking water. If the consumers have been looking for specific information about their drinking water, this annual report will provide them with the information they need.

In connection with each violation described in the previous sections, public notification is required to be issued. Public notification provides a means to protect public health, build trust with consumers through open and honest sharing of information, and establishes an ongoing, positive relationship with the community. Public notice can also be used to help consumers

Community Systems in Compliance with Consumer Notification

understand rate increases and support increased funding for drinking water treatment and protection. Properly done, the notices can work for the benefit of the public water supplier as well the public. In the event a problem occurs, educated consumers are more likely to understand the problem and support the actions a water utility must take. Many deadlines for public notice issuance depend upon prompt contact and discussion between the public water system and Illinois EPA. Efficient communication with prompt reporting is the cornerstone for compliance. **Graph 5 (left)** depicts the compliance rates for community water systems with regard to overall consumer notification during 2006. This includes failure to issue public notice and the CCR compliance rate.

CWS – Monitoring and Reporting (M&R)

The USEPA has established contaminant-specific minimum testing schedules for public water systems. Water systems typically monitor for bacteria, protozoa and viruses, nitrate and nitrite, volatile organic compounds (e.g., benzene), synthetic organic compounds (e.g., pesticides), inorganics (e.g., arsenic), lead and copper, and radionuclides. Although failure to monitor does not necessarily suggest safety problems, conducting the required monitoring and reporting is critical to ensure that problems will be detected.

During 2006, 90.3 percent of total community supplies were compliant with monitoring and reporting requirements. This is a 3.2 percent increase above the 2005 figure (87.1).

IEPA Enforcement Strategy

The Illinois EPA has enforcement authority over community water systems in Illinois. Illinois EPA has a standardized protocol for all enforcement matters to ensure unilateral, consistent treatment of enforcement cases. For any violation outlined in the previous pages, a failure to take corrective action could result in the water system being considered for enforcement under Section 31 of the Illinois Environmental Protection Act. Enforcement normally begins with the identification of a significant unresolved violation by technical staff. Information about the violator/violations is forwarded to the Compliance Group (composed of Section Managers). If the Compliance Group determines a Violation Notice (VN) is warranted, the VN recommendation is sent to the Agency's Compliance Management Panel (CMP) for review. After review by the CMP, the Compliance Assurance Section prepares and issues the VN. After the VN is sent, the violator will have a set time period (45 days or 60 days depending on whether a meeting is requested) to respond in writing with a proposed Compliance Commitment Agreement (CCA). Enforcement activities are suspended if the proposed CCA is accepted by the Agency. If at a later point in time, the violator does not follow the CCA agreement, enforcement may resume.

If the proposed CCA is not accepted or the violator fails to respond to the VN, the case is brought before the Enforcement Decision Group (EDG, composed of senior Agency management). EDG will determine the next course of action such as recommending a case for formal enforcement, which consists of referring the water system to the State's Attorney General or the USEPA for filing with a court to direct corrective actions and which may include imposition of penalties or fines.

CWS Violation Summary Table

The following page summarizes the percentage of community water systems in compliance with all aspects of the drinking water compliance program. Radionuclide MCLs comprise the largest number of violations, and consequently, cause the largest number of water systems to be out of compliance. As these systems conclude construction, compliance numbers will improve. Those systems not making progress on reducing radium MCL levels are proceeding through the enforcement process previously outlined.

**Violations during Calendar Year 2006
State of Illinois
Community Water Systems**

Total Number of Regulated Systems	1,789
Total Number of Systems in Violation	349
Total Number of Violations	1,441

Rule Subtotal by Violation Type – Community Water Systems									
Violation Category	MCLs			Treatment Techniques			Significant Monitoring/Notification		
	Number of Violations	Number of Systems in Violation*	Compliance Rate	Number of Violations	Number of Systems in Violation*	Compliance Rate	Number of Violations	Number of Systems in Violation*	Compliance Rate
Radiological	239	63	96.5%	-	-	-	57	22	98.8%
IOCs	124	37	98.0%	-	-	-	3	3	99.9%
SOCs	5	2	99.9%	-	-	-	168	6	99.7%
VOCs	0	0	100%	-	-	-	164	4	99.8%
Nitrate / Nitrite	2	2	99.9%	-	-	-	16	16	99.2%
TCR	50	41	97.8%	-	-	-	114	72	96.0%
All SWTRs	-	-	-	84	12	99.4%	0	0	100%
Stage 1 DBPR	23	12	99.4%	6	2	99.9%	184	90	95.0%
Lead and Copper Rule	-	-	-	8	8	99.6%	22	22	98.8%
Consumer Awareness / Notification	-	-	-	-	-	-	172	127	93.0%
Total PWSs	443	148	91.8%	98	21	98.9%	900	257	85.7%

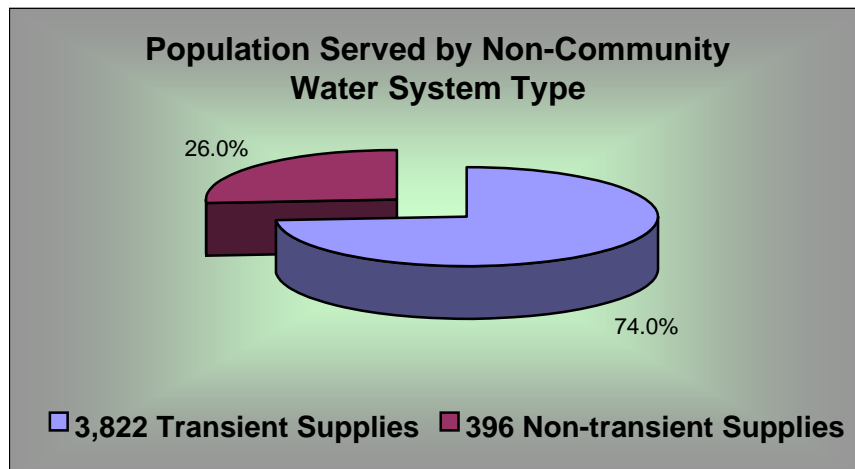

*Note: Although a CWS may be out of compliance with more than one contaminant or violation type, when calculating totals, it's counted no more than once within the population being totaled. So, the sum of NUMBER OF CWS IN VIOLATION, over the various violation types or contaminants, may not add up to the total.

Non-Community Public Water Systems

As stated previously, Illinois DPH oversees the non-community water system program. Non-community systems include the **non-transient, non-community public water systems (NTNC)** that serve 25 or more of the same nonresidents at least 180 days out of the year and include facilities such as day care centers, schools and factories. Illinois DPH also supervises the **transient non-community (TNC) public water systems** that serve 25 or more different nonresidents at least 60 days out of the year and include facilities such as campgrounds and highway rest areas.

Graph 7 ►

Population Distribution Amongst Non-community Systems

Graph 7 depicts how the 528,084 customers served by non-community water systems are distributed between the transient and non-transient systems. Transient supplies (campgrounds, rest areas, etc.) serve a population of 390,965 at 3,822 facilities. Non-transient systems serve 137,119 consumers at 396 systems.

Both NTNC and TNC are required to monitor contaminants like the CWS and issue public notification if in violation. However, TNC only monitor for nitrates, coliform bacteria, and are subject to some requirements of the surface water treatment rule (if they use surface water). NTNC monitors the same contaminants as CWS, but are not required to monitor radionuclides or issue/publish a consumer confidence report.

Non-CWS Compliance Figures

During calendar year 2006, the percentage of persons served by Illinois **non-community** water systems that were compliant with all health requirements (MCL), treatment techniques (TT), or health advisories (HA) that have been in effect for more than three years was 96.6 percent.

The following page summarizes the percentage of non-community water systems in compliance with all aspects of drinking water compliance.

**Violations during Calendar Year 2006
State of Illinois
Non-Community Water Systems**

Total Number of Regulated TNC and NTNC Systems	4218
Total Number of Systems in Violation	394
Total Number of Violations	3194

Rule Subtotal by Violation Type – Non-Community Water Systems									
Violation Category	MCLs			Treatment Techniques			Significant Monitoring/Notification		
	Number of Violations	Number of Systems in Violation*	Compliance Rate	Number of Violations	Number of Systems in Violation*	Compliance Rate	Number of Violations	Number of Systems in Violation*	Compliance Rate
IOCs	0	0	100%	-	-	-	14	9	97.7%
SOCs	0	0	100%	-	-	-	751	29	92.7%
VOCs	1	1	99.7%	-	-	-	1932	57	85.6%
Nitrate / Nitrite	10	10	99.8%	-	-	-	3	3	99.0%

Stage 1 DBPR	0	0	100%	-	-	-	14	7	98.2%
Lead/Copper**	-	-	-	0	0	100%	89	86	78.3%
Consumer Awareness / Notification	-	-	-	-	-	-	0	0	100%**
Total PWSs	157	144	96.6%	0	0	100%	3037	287	93.2%

*Note: Although a PWS may be out of compliance with more than one contaminant or violation type, when calculating totals, it's counted no more than once within the population being totaled. So, the sum of NUMBER OF PWSs IN VIOLATION, over the various violation types or contaminants, may not add up to the total.

**Public Notice for monitoring violations are not included in the compliance rate

Common Terms & Definitions

¹Public Water System (PWS)

A Public Water System (PWS) is defined as a system that provides water via piping or other constructed conveyances for human consumption to at least 15 service connections or serves an average of at least 25 people for at least 60 days each year. There are three types of PWSs. PWSs can be community (such as towns), non-transient non-community (such as schools or factories), or transient non-community systems (such as rest stops or parks). For this report when the acronym “PWS” is used, it means systems of all types unless specified in greater detail.

²Maximum Contaminant Level (MCL)

Under the Safe Drinking Water Act (SDWA), the EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs).

³Maximum Residual Disinfectant Level (MRDL)

The EPA sets national limits on residual disinfectant levels in drinking water to reduce the risk of exposure to disinfection byproducts formed when public water systems add chemical disinfectant for either primary or residual treatment. These limits are known as Maximum Residual Disinfectant Levels (MRDLs).

⁴Treatment Techniques (TT)

For some regulations, the EPA establishes treatment techniques (TTs) in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, some bacteria, and turbidity.

Return to Compliance

As noted in the definition of monitoring violations, systems which monitor less frequently than quarterly can return to compliance. Some systems can return to compliance if they monitor for the missed contaminants or submit reports late. In this report, return to compliance rates were determined for inorganic contaminants; nitrate; nitrite; regulated volatile organic contaminants; synthetic organic contaminants; total trihalomethanes; five haloacetic acids (DBPs); and radiological contaminants, as a group.

⁵Significant Monitoring and Reporting (M/R) Violations

A PWS is required to monitor and verify that the levels of contaminants present in the water do not exceed the MCL. If a PWS fails to have its water tested as required or fails to report test results correctly to the appropriate Agency, a monitoring violation occurs. For this report, significant monitoring violations are generally defined as any significant monitoring violation that occurred during the calendar year of the report. A significant monitoring violation, with rare exceptions, occurs when no samples were taken or no results were reported during a compliance period.

⁶Significant Consumer Notification Violations

Every Community Water System is required to deliver to its customers a brief annual water quality report (CCR). This report is to include some educational material, and will provide information on the source water, the levels of any detected contaminants, and compliance with drinking water regulations. For this report, a significant public notification violation occurred if a community water system completely failed to provide its customers the required annual water quality report.

OBTAINING COPY OF 2006 PUBLIC WATER SYSTEMS REPORT

As required by the Safe Drinking Water Act, the Illinois EPA has made the 2006 Public Water Systems report available to the public. Interested individuals can obtain a copy of the 2006 Annual Public Water Systems Report for Illinois by accessing:

State Website: <http://www.epa.state.il.us/water/compliance/drinking-water/compliance-report/index.html>

Note: Although a PWS may be out of compliance with more than one contaminant or violation type, when calculating totals, it's counted no more than once within the population being totaled. So, the sum of NUMBER OF PWSs IN VIOLATION, over the various violation types or contaminants, may not add up to the total.
