Qualifiers

Metals

Qualifier	Qualifier Description
^-	Continuing Calibration Verification (CCV) is outside acceptance limits, low biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Job Narrative
500-256166-2

Revision
The report being provided is a revision of the original report sent on 10/17/2024. The report (revision 2) is being revised due to: Add additional analytes to SB36 (0-3) and SB42 (0-3) per client request.

Report revision history
Revision 1 - 11/13/2024 - Reason - Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit for beryllium. The continuing calibration blanks and method blanks may not support the lower PQL..

Receipt
The samples were received on 9/5/2024 11:17 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.6º C and 3.3º C.

Metals
Method 6020B: Barium, Nickel, and Lead exceeded the reporting limit in the leachate blank. Process cleanliness cannot be guaranteed for samples undergoing metals leachate procedures at the requested reporting limit. SB36 (0-3) (500-256166-11)

Method 6020B: Iron exceeded the reporting limit in the leachate blank. Process cleanliness cannot be guaranteed for samples undergoing metals leachate procedures at the requested reporting limit. SB42 (0-3) (500-256166-23)

Method 6020B: Nickel and iron in the leachate blank exceeded the reporting limits. Since process cleanliness for non-RCRA analytes cannot be guaranteed for samples undergoing metals leachate procedures, corrective action for leachate blank contamination is limited to analyte concentrations for RCRA analytes. SB36 (0-3) (500-256166-11) and SB42 (0-3) (500-256166-23)

Method 7470A: The following sample(s) was prepared outside of preparation holding time due to mercury being requested after hold time had expired. SB36 (0-3) (500-256166-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1311: The following sample was prepared outside of preparation holding time due to the analysis being requested after the holding time had elapsed: SB36 (0-3) (500-256166-11).

Qualifiers

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Qualifiers

Metals

Qualifier	Qualifier Description
^1+	Initial Calibration Verification (ICV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Method 1311: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 500-802847, the temperature dropped below this range to 17.4 degrees Celsius. This was due to extreme cold outside and our heating system not maintaining temperature overnight. As a result, the test was not compliant with the requirements of 40 CFR Part 261.

Method 1312: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 500-802813, the temperature was outside of this range. As a result, the test was not compliant with the requirements of 40 CFR Part 261.

Job ID: 500-256508-10 — Eurofins Chicago

Job Narrative
500-256508-10

Receipt
The samples were received on 9/11/2024 11:05 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3º C.

Receipt Exceptions

Sample #5 and #6-Client labels containers with paper label and writes on lids. For samples SB74 paper label and lid have different depths (paper label list (0-3) and lids list (3-5) and vice versa for other set). Matched and logged per client paper label not per sample IDs on lids.

Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit for SPLP Berylium: SB76 (7.5-10) (500-256508-10). The continuing calibration blanks and method blanks may not support the lower PQL.

Metals
Method 6020B: The method blank for preparation batch 500-812104 and 500-812419 and analytical batch 500-812676 contained Manganese above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the method blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Revision
The report being provided is a revision of the original report sent on 1/21/2025. The report (revision 1) is being revised due to: Remove erroneous H flags from sample data.

Receipt
The samples were received on 9/11/2024 11:05 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3º C.

Receipt Exceptions

Sample #5 and #6-Client labels containers with paper label and writes on lids. For samples SB74 paper label and lid have different depths (paper label list (0-3) and lids list (3-5) and vice versa for other set). Matched and logged per client paper label not per sample IDs on lids.

Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit for SPLP Berylium: SB76 (7.5-10) (500-256508-10). The continuing calibration blanks and method blanks may not support the lower PQL.

Metals
Method 1311: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 500-802847, the temperature dropped below this range to 17.4 degrees Celsius. This was due to extreme cold outside and our heating system not maintaining temperature overnight. As a result, the test was not compliant with the requirements of 40 CFR Part 261.

Method 6010D: The laboratory control sample (LCS) for prep batch 802853 recovered outside control limits for the following analytes: Cr. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Method 1311: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 500-802847, the temperature dropped below this range to 17.4 degrees Celsius. This was due to extreme cold outside and our heating system not maintaining temperature overnight. As a result, the test was not compliant with the requirements of 40 CFR Part 261.

Method 1312: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 500-802813, the temperature was outside of this range. As a result, the test was not compliant with the requirements of 40 CFR Part 261.

Method 6010D: The laboratory control sample (LCS) for prep batch 802853 recovered outside control limits for the following analytes: Cr. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 6010D: The continuing calibration verification (CCV) at line 59 in AD batch 803029 recovered above the upper control limit for Ni. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 6020B: The laboratory control sample (LCS) for preparation batch 500-802853 and analytical batch 500-803093 recovered outside control limits for the following analytes: Thallium. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Qualifiers

Metals

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
F1	MS and/or MSD recovery exceeds control limits.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Revision
The report being provided is a revision of the original report sent on 10/17/2024. The report (revision 5) is being revised due to: Add TCLP Tl to SB89 (3-5) by 6010D per client request and lack of in-hold sample remaining to run by 6020B.

Report revision history
Revision 1 - 10/24/2024 - Reason - Added Chromium to sample SB89 (0-3) and Zinc to SP91 (0-3) per client request.

Revision 2 - 11/22/2024 - Reason - Add TCLP Ni to SB89 (0-3) per client request.

Revision 3 - 1/21/2025 - Reason - Add additional TCLP analytes to per client request.

Revision 4 - 3/17/2025 - Reason - Add TCLP V to SB91 (0-3) per client request.

Receipt
The samples were received on 9/13/2024 12:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

Receipt Exceptions

Sample SB87 (3-5) was lost in the lab and therefore no further analyses could be performed on the sample.

Metals
Method 6020B: The laboratory control sample (LCS) for preparation batch 240-630763 and 240-630837 and analytical batch 240-631309 recovered outside control limits for the following analyte: Thallium. This analyte was biased high in the LCS and was below the reporting limit in the associated sample; therefore, the data has been reported.

Method 6020B: Nickel in the leachate blank exceeded the reporting limit. Since process cleanliness for non-RCRA analytes cannot be guaranteed for samples undergoing metals leachate procedures, corrective action for leachate blank contamination is limited to analyte concentrations for RCRA analytes. SB90 (0-3) (500-256719-7) and SB91 (0-3) (500-256719-9)

Method 6020B: Thallium read above the reporting limit in the initial calibration blank. The result for thallium may be biased high. SB91 (0-3) (500-256719-9)

Method 7470A: The following sample(s) was prepared outside of preparation holding time due to mercury being requested after hold time had expired. SB90 (0-3) (500-256719-7) and SB91 (0-3) (500-256719-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method 1311: The following samples were prepared outside of preparation holding time due the analysis being requested after the holding time had already elapsed : SB90 (0-3) (500-256719-7) and SB91 (0-3) (500-256719-9).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

The samples were received on 9/13/2024 12:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

Receipt Exceptions

Sample SB87 (3-5) was lost in the lab and therefore no further analyses could be performed on the sample.

Metals
Method 6010D: The sample result recovered slightly more negative than the reporting limit for lead. The result was not greater than two times the reporting limit. The samples has been qualified and reported.

SB90 (7.5-10) (500-256719-8)

Method 6010D: The CCV failed low for Vanadium. It was requested after report was complete. Results may be biased low. SB89 (3-5) (500-256719-6)

Method 1312: EPA Method 1311 requires the room temperature to be maintained at 23 +/- 2 degrees Celsius for the duration of the leaching process. For batch 500-802813, the temperature was outside of this range. As a result, the test was not compliant with the requirements of 40 CFR Part 261.

Method 6010D:

Method 6010D: .The laboratory control sample (LCS fluid 2) for prep batch 802853 recovered outside control limits for the following analytes: Cr. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 6020B: The laboratory control sample (LCS) for preparation batch 500-802853 and analytical batch 500-803093 recovered outside control limits for the following analytes: Thallium. REVISION

The report being provided is a revision of the original report sent on 11/13/2024. The report (revision 2) is being revised due to The report and EDD have been revised to include all results. There was an error with last revision..

Report revision history
Revision 1 - 11/13/2024 - Reason - The report and EDD have been revised to remove results for method 8270E as samples were prepared past the holdtime.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 10/22/2024 2:00 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 1.1°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-792563 was outside the method criteria for the following analyte(s): 1,2-Dibromo-3-Chloropropane, Benzene and Naphthalene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following analyte(s) recovered outside control limits for the LCS associated with analytical batch 500-792563: Benzene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

PCBs
Method 8082A: The laboratory control sample duplicate (LCSD) for preparation batch 500-792182 and analytical batch 500-792336 recovered outside control limits for the following analytes: PCB-1016 and PCB-1260. All analytes were within the QC limits in the LCS; therefore, the data have been reported.

Method 8082A: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-792182 and analytical batch 500-792336 recovered outside control limits for the following analytes: PCB-1016 and PCB-1260.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Pesticides
Method 8081B: The laboratory control sample duplicate (LCSD) for preparation batch 500-792182 and analytical batch 500-792323 recovered outside control limits for the following analytes: gamma-Chlordane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Method 8081B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-792182 and analytical batch 500-792323 recovered outside control limits for the following analytes: gamma-Chlordane.

Job ID: 500-258873-1 (Continued) Eurofins Chicago

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Revision
The report being provided is a revision of the original report sent on 11/6/2024. The report (revision 2) is being revised due to: The report and EDD have been revised to remove the dissolved PAH results for the following samples as the lab extracted unfiltered samples for these:
MW-302
MW-303

Report revision history
Revision 1 - 11/13/2024 - Reason - The report and EDD have been revised to removed the dissolved PAH results for samples MW-304 and MW-306 as these samples were prepared from an unfiltered sample..

Receipt
The samples were received on 10/24/2024 12:18 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.4º C and 3.8º C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-793591 was outside the method criteria for the following analyte(s): 1,2-Dibromo-3-Chloropropane, Bromomethane, Chloroform, Chloromethane and Dichlorodifluoromethane. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 500-793591 recovered outside control limits for the following analytes: 1,1,1-Trichloroethane, 2-Butanone (MEK), 2-Hexanone and Carbon tetrachloride.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) associated with batch 500-792826 recovered above the upper control limit for 2,6-Dinitrotoluene. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 8270E: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside limits when using this list of analytes. The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-792654 and analytical batch 500-792826 recovered outside limits for the following analytes: 3 & 4 Methylphenol. These results have been reported and qualified.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-792542 recovered above the upper control limit for the following analyte(s): Benzo[a]pyrene, Benzo[b]fluoranthene, Benzo[g,h,i]perylene, Dibenz(a,h)anthracene, Indeno[1,2,3-cd]pyrene, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dinitrophenol, Hexachlorobenzene and Hexachlorocyclopentadiene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-792824 was outside the method criteria for the following analyte(s): Indeno[1,2,3-cd]pyrene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-792539 and analytical batch 500-792912 recovered outside control limits for the following analytes: Methoxychlor.

Method 8081B: The continuing calibration verification (CCV) associated with batch 500-792912 recovered above the upper control limit for DCB Decachlorobiphenyl. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCVIS 500-792912/4).

Job ID: 500-259032-1 (Continued) Eurofins Chicago

Method 8081B: Tetrachloro-m-xylene surrogate recovery for the following samples were outside control limits: MW-102 (500-259032-5), MW-303 (500-259032-7) and (LCS 500-792539/2-A). DCB Decachlorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: DCB Decachlorobiphenyl surrogate recovery for the following sample was outside control limits: MW-306 (500-259032-2). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6020B: The method blank for preparation batch 500-793260 and analytical batch 500-793543 contained Sodium above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The sample was received on 10/25/2024 12:25 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.1º C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-793568 was outside the method criteria for the following analyte(s): Bromomethane, n-Butyl alcohol and Vinyl acetate. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in 500-792824 was outside the method criteria for the following analyte(s): Indeno[1,2,3-cd]pyrene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) associated with batch 500-793243 recovered above the upper control limit for 2,4-Dinitrotoluene and Phenol-d5 (Surr). The samples associated with this CCV were non-detects for the affected target analytes; therefore, the data have been reported.

Method 8270E: The laboratory control sample (LCS) for preparation batch 500-793202 and analytical batch 500-793243 recovered outside acceptable limits for: Anthracene, Benzo[a]anthracene, Chrysene, Phenanthrene, Pyrene, 2,4,5-Trichlorophenol, 2,4,6-Trichlorophenol, 2,4-Dichlorophenol, 2-Chlorophenol, 3 & 4 Methylphenol, 4-Bromophenyl phenyl ether, 4-Chloro-3-methylphenol, Bis(2-chloroethoxy)methane, Bis(2-ethylhexyl) phthalate, Butyl benzyl phthalate, Dimethyl phthalate, Di-n-octyl phthalate, N-Nitrosodiphenylamine and Phenol. The associated sample was re-extracted past hold-time with acceptable QC and concurring target results. The in-hold data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-792539 and analytical batch 500-792912 recovered outside control limits for the following analytes: Methoxychlor.

Method 8081B: Tetrachloro-m-xylene surrogate recovery for the following sample was outside control limits: (LCS 500-792539/2-A). DCB Decachlorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6020B: The initial low level calibration verification (ICVL) result for batch 500-793772 was above the upper control limit. The affected analytes are: Beryllium. Sample results were below the reporting limit, and have been reported as qualified data.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 12/3/2024 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.7º C.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in 500-798181 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol (Surr). As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-798918 was outside the method criteria for the following analyte(s): bis(chloroisopropyl) ether. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-798918 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. (CCVIS 500-798918/2)

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: NMW-2 (500-260898-2). These results have been reported and qualified.

Method 8270E: The following sample was diluted due to the nature of the sample matrix: NMW-2 (500-260898-2). Elevated reporting limits (RLs) are provided.

Method 8270E: The laboratory control sample (LCS) for preparation batch 500-798027 and analytical batch 500-798181 recovered outside control limits for several analytes, see QC sample results for detail.

The associated samples were re-extracted past hold-time with acceptable QC and concurring target results. The in-hold data have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-798027 and analytical batch 500-798181 recovered outside control limits for several analytes, see QC sample results for detail.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 12/6/2024 5:52 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3º C.

GC/MS Semi VOA
Method 8270E: Surrogate recovery for the following samples were outside the upper control limit: MW-303 (500-261185-3), MW-304 (500-261185-4) and MW-306 (500-261185-5). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-798918 was outside the method criteria for the following analyte(s): bis(chloroisopropyl) ether. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-798918 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. (CCVIS 500-798918/2)

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-799304 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol (Surr). As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-799376 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol (Surr). As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-799304 was outside the method criteria for the following analyte(s): 4-Nitrophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-799207 and analytical batch 500-799304 recovered outside control limits for the following analytes: 2,4-Dinitrophenol, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, 4-Chlorophenyl phenyl ether, 4-Nitroaniline, 4-Nitrophenol, Benzo[k]fluoranthene, Diethyl phthalate, Di-n-butyl phthalate, Fluoranthene and Pentachlorophenol.

Receipt
The samples were received on 12/12/2024 12:12 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.6º C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-799899 was outside the method criteria for the following analyte(s): 2-Butanone (MEK), Acetone, Bromomethane, Carbon disulfide and Chloroethane. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following analytes recovered outside control limits for the LCS/LCSD associated with analytical batch 500-799899: Bromomethane and Carbon disulfide. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

Method 8260D: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for analytical batch 500-799899 recovered outside control limits for the following analyte: Bromomethane.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-800589 was outside the method criteria for the following analyte(s): 4-Nitroaniline, 4-Nitrophenol and Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-800589 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside limits when using this list of analytes. The laboratory control sample and laboratory control sample duplicate (LCS/LCSD) for preparation batch 500-799970 and analytical batch 500-800589 recovered outside limits for the following analytes: Benzo[g,h,i]perylene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. These results have been reported and qualified.

Method 8270E: The laboratory control sample (LCS) for preparation batch 500-799970 and analytical batch 500-800589 recovered outside control limits for the following surrogate: Phenol-d5 (Surr). No corrective action is required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: Surrogate DCB Decachlorobiphenyl is outside acceptable limits for the following continuing control verification (CCVIS): (CCVIS 500-800216/5). Surrogate Tetrachloro-m-xylene is within acceptable limits; therefore, re-analysis was not performed.

Method 8081B: DCB Decachlorobiphenyl surrogate recovery for the following sample was outside control limits: MW-311 (500-261525-4). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8081B: The continuing calibration verification (CCV) associated with batch 500-800216 recovered above the upper control limit for Chlordane (technical). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: (CCV 500-800216/7).

Method 8082A: DCB Decachlorobiphenyl surrogate recovery for the following samples was outside control limits: MW-311 (500-261525-4). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: The following sample was diluted due to the nature of the sample matrix: MW-310 (500-261525-3). Elevated reporting limits (RLs) are provided.

Job ID: 500-261525-1 (Continued) Eurofins Chicago

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6020B: The linear range check (LRC) recovered outside of control limits for Arsenic. Sample results within the high calibration standard have been qualified and reported: (LRC 500-799882/14)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Revision
The report being provided is a revision of the original report sent on 12/31/2024. The report (revision 1) is being revised due to: to correct the reactive sulfide results that were off by a factor or 10X..

Receipt
The samples were received on 12/13/24 11:17. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.0º C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-800251 was outside the method criteria for the following analyte(s): 1,1,2,2-Tetrachloroethane, Carbon disulfide, Naphthalene and trans-1,2-Dichloroethene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-800589 was outside the method criteria for the following analyte(s): 4-Nitroaniline, 4-Nitrophenol and Pentachlorophenol. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-800589 was outside the method criteria for the following analyte(s): Benzo[g,h,i]perylene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for preparation batch 500-799970 and analytical batch 500-800589 recovered outside control limits for the following analytes: Benzo[g,h,i]perylene, Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8270E: The laboratory control sample (LCS) for preparation batch 500-799970 and analytical batch 500-800589 recovered outside control limits for the following surrogate: Phenol-d5 (Surr). No corrective action is required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: Surrogate DCB Decachlorobiphenyl is outside acceptable limits for the following continuing control verification (CCVIS): (CCVIS 500-800216/5). Surrogate Tetrachloro-m-xylene is within acceptable limits; therefore, re-analysis was not performed.

Method 8081B: DCB Decachlorobiphenyl surrogate recovery for the following sample was outside control limits: MW-312 (500-261583-1). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8081B: The continuing calibration verification (CCV) associated with batch 500-800216 recovered above the upper control limit for Chlordane (technical). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: (CCV 500-800216/7).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6020B: The following samples were diluted to bring the concentration of target analytes within the calibration range: MW-312 (500-261583-1) and MW-313 (500-261583-2). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 500-261583-1 (Continued)

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Samples ABB00970-03, -05, and -07: S=For Aroclor 1016, the Blank Spike percent recovery (41%) was outside laboratory control limits (50% - 114%).

8270:
Samples ABB00970-01 & -03 required analysis at dilution due to dark extracts and dirty samples. Surrogates were diluted out.
Sample ABB00970-05: S = Surrogate 4-Terphenyl-d14 had recovery (23%) outside the acceptance limits (30-152%).
Sample ABB00970-07: S = Surrogate 4-Terphenyl-d14 had no recovery.
SAmples ABB00970-01, -03, -05, -07: S = Batch LCS had no recovery of Dimethylphthalate.

8260:
Sample ABB0970-03: S= For Bromomethane, the MS percent recovery (37%) was outside laboratory control limits (41% - 181%).
The CCV recovered above the upper control limit for vinyl acetate. Corrective action: None, Vinyl acetate (was/were) not detected in the associated samples.

- All radiological results are reported to the 95% confidence level.

Abbreviations:
- Reporting Limit: The concentration at which an analyte can be routinely detected on a day to day basis, and which also meets regulatory and client needs.
- Quantitation Limit: The lowest concentration at which results can be accurately quantitated.
- J: The analyte was positively identified above our Method Detection Limit and is considered detectable and usable; however, the associated numerical value is the approximate concentration of the analyte in the sample.
- ATC: Automatic Temperature Correction. - TNTC: Too Numerous To Count
- TIC: Tentatively Identified Compound (GCMS library search identification, concentration estimated to nearest internal standard).

Analysis Case Narrative

8081:
Sample ABB1096-01: S = Recovery of surrogate DCB (6%, 4%) was below acceptance limits (20-116%) on both columns. Recovery of the other surrogate was within limits.
Sample ABB1146-05: S = Recovery of surrogate DCB (18%, 15%) was below acceptance limits (20-116%) on both columns. Recovery of the other surrogate was within limits.

8082:
Sample ABB1096-01: S = Recovery of surrogate DCB (7%, 5%) was below acceptance limits (20-116%) on both columns. Recovery of the other surrogate was within limits.
Sample ABB1146-05: S = Recovery of surrogate DCB (18%) was below acceptance limits (20-116%) on column 2. All other surrogate recoveries were within limits.

8270:
Samples ABB1146-01, -05, and -07: S=For Dimethyl phthalate, the Blank Spike percent recovery (9%) was outside laboratory control limits (10% - 105%).

8260:
The CCV in sequence SB00725 recovered outside the control limits for Bromomethane, Vinyl acetate, n-Butanol, 1,4-Dioxane and 1,2-Dichloro-3-chloropropane . Corrective action: None, these compounds were not detected in the associated samples.

Samples ABB1146-01, -03, -05 and -07: S=The Blank Spike exceeded the upper acceptance limit for n-Butanol and 1,4-Dioxane, resulting in a high bias. There were no detects in the samples

Sample ABB1146-01: S=The MS percent recoveries for the following analytes were outside laboratory control limits

Bromomethane 37% (Limit: 41% - 181%)
Chloroethane 0% (Limit: 46% - 162%)
n-Butanol 151% (Limit: 50-150%)
1,4-Dioxane: 172% (Limit: 36-139%)

8270:

Sample ABB1213-01: S=For Dimethyl phthalate, the Blank Spike percent recovery (9%) was outside laboratory control limits (10% - 105%).

8260:

The CCV in sequence SB00725 recovered outiside tihe contirol limitis for Bromometihan, Vinyl acetiate, n-Butianol, 1,4-Dioxane and 1,2-Dichloro-3-chloropropane . Corrective action: None, tihese compounds were noti detiectied in tihe associatied samples

Sample ABB1213-01: S=The Blank Spike exceeded tihe upper acceptiance limiti for n-Butianol and 1,4-Dioxane, resulting in a high bias. There were no detiectis in tihe sample

Revision
The report being provided is a revision of the original report sent on 3/31/2025. The report (revision 1) is being revised due to: The report and EDD have been revised to report total and dissolved carbazole for MW-315 per client request..

Receipt
The samples were received on 3/19/2025 4:14 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.4º C.

GC/MS Semi VOA
Method 8270E: The laboratory control sample duplicate (LCSD) for preparation batch 500-810666 and analytical batch 500-810735 recovered outside control limits for the following analytes: Benzo[a]anthracene, 4-Chloroaniline, 3,3'-Dichlorobenzidine, Hexachlorobutadiene, Phenol and Pyrene. All analytes were within the QC limits in the LCS; therefore, the data have been reported.

Method 8270E: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 500-810666 and analytical batch 500-810735 recovered outside control limits for the following analytes: Acenaphthene, Acenaphthylene, Anthracene, Benzo[a]anthracene, Benzo[b]fluoranthene, Bis(2-chloroethoxy)methane, Bis(2-chloroethyl)ether, bis(chloroisopropyl) ether, Bis(2-ethylhexyl) phthalate, 4-Bromophenyl phenyl ether, Butyl benzyl phthalate, 4-Chloroaniline, 4-Chloro-3-methylphenol, 2-Chloronaphthalene, 2-Chlorophenol, 4-Chlorophenyl phenyl ether, Chrysene, Dibenzofuran, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 2,4-Dichlorophenol, Diethyl phthalate, Dimethyl phthalate, 4,6-Dinitro-2-methylphenol, 2,4-Dinitrophenol, 2,4-Dinitrotoluene, 2,6-Dinitrotoluene, Fluoranthene, Fluorene, Hexachlorobenzene, Hexachlorobutadiene, Hexachlorocyclopentadiene, Hexachloroethane, Isophorone, 2-Methylnaphthalene, 2-Methylphenol, 3 & 4 Methylphenol, Naphthalene, 2-Nitroaniline, Nitrobenzene, 2-Nitrophenol, 4-Nitrophenol, N-Nitrosodi-n-propylamine, N-Nitrosodiphenylamine, Pentachlorophenol, Phenanthrene, Phenol, Pyrene, 1,2,4-Trichlorobenzene, 2,4,5-Trichlorophenol and 2,4,6-Trichlorophenol.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-810735 was outside the method criteria for the following analyte(s): Di-n-octyl phthalate. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-810828 was outside the method criteria for the following analyte(s): Di-n-octyl phthalate. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The following sample was diluted to bring the concentration of target analytes within the calibration range: MW-202 (500-265488-6). Elevated reporting limits (RLs) are provided.

Method 8270E: The following sample required a dilution due to the nature of the sample matrix: MW-202 (500-265488-6). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-810985 was outside the method criteria for the following analyte(s): Indeno[1,2,3-cd]pyrene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
500-270760-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 6/27/2025 11:01 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.9°C.

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-823992 was outside the method criteria for the following analyte(s): 1,2-Dichloroethane-d4 (Surr). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC/MS Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Analytical Report for Work Order: O25C0901 Revision 0

RE: 24-0124-103, 8080 S. Lake Shore Drive

Dear Pioneer Engineering & Environmental Services, Inc.:

Sterling Labs has received 1 sample for the referenced project on March 20, 2025 15:45. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Pat 186 / TNI standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (847) 967-6666.

Sincerely,

Melissa Dunham
