Revision
The report being provided is a revision of the original report sent on 10/13/2024. The report (revision 2) is being revised due to: The report and EDD have been revised to report to the MDL for Pesticides per client request..

Report revision history
Revision 1 - 12/11/2024 - Reason - The report and EDD have been revised to report the VOCs/SVOCs to the MDL where non-detects report as <MDL per client request..

Receipt
The samples were received on 9/23/2024 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.6º C.

GC/MS VOA
Method 8260D: Internal standard (1,4-Dichlorobenzene-d4) response was outside of acceptance limits for the following sample: SB113 (10-12.5) (500-257169-2). The sample did not have detects of requested analytes using this internal standard. Surrogate 4-Bromofluorobenzene is also being quantized with this internal standard.

Method 8260D: The laboratory control sample (LCS) for analytical batch 500-789026 recovered outside control limits for the following analytes: Chloromethane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Method 8260D: Internal standard /surrogate responses were outside of acceptance limits for the following sample: SB115 (0-3) (500-257169-5). The sample(s) shows evidence of matrix interference, as sample was analyzed multiple times with concurring failures.

Method 8260D: The following samples were received with frozen water vials broken. The samples were analyzed for an opened 5030 bulk jar.SB114 (0-3) (500-257169-3), SB116 (0-3) (500-257169-7) and SB116 (12.5-15) (500-257169-8)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-788692 was outside the method criteria for the following analyte(s): Hexachlorocyclopentadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: Perylene-d12 Internal standard (ISTD) response for the following samples was outside of acceptance limits: SB114 (0-3) (500-257169-3). Analytes associated to this internal standard were non-detect; therefore, re-analysis was not performed.

Method 8270E: The following samples were diluted due to the nature of the sample matrix: SB113 (0-3) (500-257169-1), SB114 (0-3) (500-257169-3), SB115 (0-3) (500-257169-5) and SB115 (5-7.5) (500-257169-6). Elevated reporting limits (RLs) are provided.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: SB114 (0-3) (500-257169-3), SB115 (0-3) (500-257169-5) and SB115 (5-7.5) (500-257169-6). These results have been reported and qualified.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-788864 was outside the method criteria for the following analyte(s): 2-Nitroaniline and bis(chloroisopropyl) ether. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The following samples required a dilution due to the nature of the sample matrix: SB115 (0-3) (500-257169-5) and SB115 (5-7.5) (500-257169-6). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8270E: Six surrogates are used for this analysis. The laboratory's SOP allows one acid and one base of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: SB114 (7.5-12) (500-257169-4). These results have been reported and qualified.

Job ID: 500-257169-1 (Continued) Eurofins Chicago

Method 8270E: The following sample was diluted due to the nature of the sample matrix: SB116 (0-3) (500-257169-7). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: DCB Decachlorobiphenyl surrogate recovery for the following samples was outside control limits: SB113 (10-12.5) (500-257169-2) and SB115 (0-3) (500-257169-5). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: SB113 (10-12.5) (500-257169-2), SB114 (0-3) (500-257169-3), SB114 (7.5-12) (500-257169-4) and SB115 (0-3) (500-257169-5). Elevated reporting limits (RLs) are provided.

Method 8081B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for preparation batch 500-788403 and analytical batch 500-789971 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: (500-257169-D-1-B MS) and (500-257169-D-1-C MSD). Because of this dilution, the surrogate spike and matrix spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081B: The following samples required a dilution due to the nature of the sample matrix: SB113 (0-3) (500-257169-1), SB117 (0-3) (500-257169-9), (500-257169-D-1-B MS) and (500-257169-D-1-C MSD). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8081B: Surrogate recovery for the following samples were outside the upper control limit: SB115 (5-7.5) (500-257169-6), SB116 (0-3) (500-257169-7) and SB116 (12.5-15) (500-257169-8). This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

Method 8081B: The following samples were diluted due to the nature of the sample matrix: SB113 (0-3) (500-257169-1), SB115 (5-7.5) (500-257169-6), SB116 (0-3) (500-257169-7), SB116 (12.5-15) (500-257169-8), SB117 (0-3) (500-257169-9), SB117 (5-7.5) (500-257169-10), (500-257169-D-1-B MS) and (500-257169-D-1-C MSD). Elevated reporting limits (RLs) are provided.

Method 8082A: Tetrachloro-m-xylene surrogate recovery for the following sample was outside control limits: SB115 (0-3) (500-257169-5). DCB Decachlorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: DCB Decachlorobiphenyl surrogate recovery for the following samples were outside control limits: SB115 (5-7.5) (500-257169-6) and SB116 (0-3) (500-257169-7). Tetrachloro-m-xylene surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8082A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 500-788403 and analytical batch 500-789912 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 8082A: The following samples were diluted due to the nature of the sample matrix: SB113 (0-3) (500-257169-1), SB113 (10-12.5) (500-257169-2), SB114 (0-3) (500-257169-3), SB114 (7.5-12) (500-257169-4), SB115 (0-3) (500-257169-5), SB115 (5-7.5) (500-257169-6), SB116 (0-3) (500-257169-7), SB116 (12.5-15) (500-257169-8), SB117 (0-3) (500-257169-9), SB117 (5-7.5) (500-257169-10), (500-257169-D-1-D MS) and (500-257169-D-1-E MSD). Receipt
The samples were received on 12/06/24 17:52. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.3º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB21b (10-12.5) (500-261186-3), SB21c (12.5-15) (500-261186-6) and SB21d (10-12.5) (500-261186-9). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 12/11/24 12:55. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.7º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB21e(12.5-15) (500-261388-2), SB70b(12.5-15) (500-261388-8), SB70d(10-12.5) (500-261388-14) and SB70e(10-12.5) (500-261388-19). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 12/16/2024 11:06 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.7º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: B119 (15-17.5) (500-261656-1), B61b (12.5-15) (500-261656-4) and B61c (12.5-15) (500-261656-7). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Revision
The report being provided is a revision of the original report sent on 12/31/2024. The report (revision 1) is being revised due to: to correct the reactive sulfide result that was off by a factor or 10X..

Receipt
The samples were received on 12/17/24 10:50. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.9º C.

Receipt Exceptions
All samples taken off HOLD for TPH by client on 12/18.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB61d (17.5-20) (500-261722-2) and SB61e (10-12.5) (500-261722-5). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

- All radiological results are reported to the 95% confidence level.

Abbreviations:
- Reporting Limit: The concentration at which an analyte can be routinely detected on a day to day basis, and which also meets regulatory and client needs.
- Quantitation Limit: The lowest concentration at which results can be accurately quantitated.
- J: The analyte was positively identified above our Method Detection Limit and is considered detectable and usable; however, the associated numerical value is the approximate concentration of the analyte in the sample.

Analysis Case Narrative

6010:
Sample ABB0268-02: G= Sample diluted due to interferences which resulted in elevated reporting limits for Antimony and Thallium.

Samples ABB0268-03, -05, and -06: G= Samples diluted due to interferences which resulted in elevated reporting limits for Thallium.

Sample ABB0268-02: S=The MS and the MSD percent recoveries for the following analytes were outside laboratory control limits (75% - 125%):

Antimony; 50%, 49%
Beryllium; 69%, 68%
Cadmium; 60%, 59%
Chromium; 47%, 52%
Cobalt; 62%, 62%
Lead; 59%, 59%
Nickel; 56%, 59%
Selenium; 68%, 69%
Thallium; 0%, 0%
Vanadium; 63%, 63%

Sample ABB0268-06: S=The MS percent recoveries for the following analytes were outside laboratory control limits (75% - 125%):

Lead; 74%
Selenium; 64%
Thallium; 0%

8270:
Sample ABB0268-01 was analyzed at a 10x dilution due to bad matrix. At this dilution, the surrogate spike was diluted to the lower end of the calibrated range and 5 out of the 6 surrogates recovered below the acceptance ranges.

Samples ABB0268-03, -05, and -06 were analyzed at a 5x dilution due to bad matrix.

8270 SIM:
Sample ABB0268-07 required dilutions for many of the compounds. The MS and MSD performed on this sample were spiked with amounts that were below the native sample concentration and therefore recovery cannot be accurately calculated.

Sample ABB0268-01: S=The MS and/or the MSD percent recoveries for the following analytes were outside laboratory control limits due to matrix interference:
gamma-BHC; 122%, 148% (Limit: 49% - 109%)
gamma-Chlordane; 34%, 33% (Limit: 43% - 113%)

8260:
The CCV in sequence SB00441 recovered outside control limit for several analytes. Corrective action: None, these analytes were either not detected in the associated samples or if detected were less than the Reporting Limit.

Samples ABB0268-01 through -06: S=The Blank Spike exceeded the upper acceptance limit for Chloromethane, resulting in a high bias. There were no detects in the samples.

Sample ABB0268-02: H = SPLP Cyanide was received past the holding time for the 1312 leaching procedure.

Sample ABB0307-01 through -06: G= Samples diluted due to matrix interferences which resulted in elevated reporting limits for this test.

Sample ABB0307-02: S=The MS and/or the MSD percent recoveries for the following analytes were outside laboratory control limits :
Hexachlorocyclopentadiene: 0% and 0% (41% - 105%)
2-Nitrophenol: 53% and 49% (57% - 110%)
2,4-Dinitrophenol: 0% and 0% (45% - 105%)

Fluoranthene: 54% (56% - 114%)

Sample ABB0307-01: S=The MS and/or the MSD percent recoveries for the following analytes were outside laboratory control limits :
Hexachlorocyclopentadiene: 25% and 6% (41% - 105%)
3,3-Dichlorobenzidine: 20% and 4% (32% - 105%)

Sample ABB0307-01: R=The MS & MSD Precision for the following analytes were greater than laboratory control limits:
Hexachlorocyclopentadiene: 122% (Limit: 30%)
3,3-Dichlorobenzidine: 77% (Limit: 30%)

8081:
Sample ABB0307-05 recovered outside of control limits for the Decachlorobiphenyl surrogate due to matrix interference.

Sample ABB0307-06: S= For gamma-BHC, the MS percent recovery (1450%) and the MSD percent recovery (ND) were outside laboratory control limits (49% - 109%). Matrix interference is suspected.

Sample ABB0307-06: R=The MS & MSD Precision for the following analytes were greater than laboratory control limits:
gamma-BHC; Not calculated (Limit: 30%)
beta-BHC; 34% (Limit: 30%)
Heptachlor epoxide; 33% (Limit: 30%)

8260:

General Comments:
- All results reported in wet weight unless otherwise indicated. (dry = Dry Weight)
- Sample results relate only to the analytes of interest tested and to sample as received by the laboratory.
- Environmental compliance sample results meet the requirements of 35 IAC Part 186 unless otherwise indicated.
- Waste water analysis follows the rules set forth in 40 CFR part 136 except where otherwise noted.
- Accreditation by the State of Illinois is not an endorsement or a guarantee of the validity of data generated.
- For more information about the laboratories' scope of accreditation, please contact us at (708) 544-3260 or the Agency at (217) 782-6455.
- All radiological results are reported to the 95% confidence level.

Abbreviations:
- Reporting Limit: The concentration at which an analyte can be routinely detected on a day to day basis, and which also meets regulatory and client needs.
- Quantitation Limit: The lowest concentration at which results can be accurately quantitated.
- J: The analyte was positively identified above our Method Detection Limit and is considered detectable and usable; however, the associated numerical value is the approximate concentration of the analyte in the sample.
- ATC: Automatic Temperature Correction. - TNTC: Too Numerous To Count
- TIC: Tentatively Identified Compound (GCMS library search identification, concentration estimated to nearest internal standard).
- SS: (Surrogate Standard): Quality control compound added to the sample by the lab.
-LA: Lab Accident - No valid data to report.
-VO: Insufficient Volume provided
-BR: Received broken
-IP: Invalid Sampling
-ND: Non-detect

Analysis Case Narrative

Sample ABB0709-01: S= For Mercury, the MS percent recovery (46%) was outside laboratory control limits (70% - 130%).

6010:
Samples ABB0709-01 through -04: G= Samples diluted due to interferences which resulted in elevated reporting limits for Selenium.

6010 TCLP:
Sample ABB0709-03: G=The continuing calibration blank contained Antimony at 0.0058 m/L. (MDL is 0.0048 mg/L).

8081:
Sample ABB0709-02: S=The MS and/or the MSD percent recoveries for the following analytes were outside laboratory control limits:

Endrin ketone; 7% (Limit: 37% - 123%) (MSD only)
alpha-BHC; 34%, 26% (Limit: 48% - 113%)
gamma-BHC; 169%, 192%(Limit: 49% - 109%)
delta-BHC; -41% (Limit: 40% - 117%) (MS only)
Endosulfan I; 20% (Limit: 48% - 106%) (MS only)
Endosulfan II; 46% (Limit: 47% - 117%) (MS only)
Endosulfan sulfate; 42%, 43% (Limit: 50% - 118%)
4,4'-DDD; 133% (Limit: 49% - 118%) (MSD only)

Sample ABB0709-02: R=The MS & MSD Precision for the following analytes were greater than laboratory control limits (30%):

delta-BHC; 1120%
Endosulfan I; 89%
Aldrin; 32%
Heptachlor epoxide; 48%
4,4'-DDT; 50%

8260:
Sample ABB0709-03: G= The Internal Standard, 1,4-Dichlorobenzene-d4, was suppressed due to matrix interference. The associated analyte, 1,1,2,2-tetrachloroethane, was not detected in the sample and would be biased high. The sample was analyzed twice and the rerun confirmed the initial result.

Cyanide:

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

The following is a definition of flags that may be used in this report:

Flag	Description	Flag	Description
A	Method holding time is 15 minutes from collection. Lab analysis was performed as soon as possible.		
B	Analyte was found in the method blank.	L	LCS recovery outside control limits.
<	Analyte not detected at or above the reporting limit.	M	MS recovery outside control limits; LCS acceptable.
C	Sample received in an improper container for this test.	P	Chemical preservation pH adjusted in lab.
D	Surrogates diluted out; recovery not available.	Q	Result was determined by a GC/MS database search.
E	Estimated result; concentration exceeds calibration range.	S	Analysis was subcontracted to another laboratory.
G	Surrogate recovery outside control limits.	T	Result is less than three times the MDL value.
H	Analysis or extraction holding time exceeded.	W	Reporting limit elevated due to sample matrix.
I	ICVS % rec outside 95-105% but within 90-110%		
J	Estimated result; concentration is less than routine RL but greater than MDL.	N	Analyte is not part of our NELAC accreditation or accreditation may not be available for this parameter.
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

The following is a definition of flags that may be used in this report:

Flag	Description	Flag	Description
A	Method holding time is 15 minutes from collection. Lab analysis was performed as soon as possible.		
B	Analyte was found in the method blank.	L	LCS recovery outside control limits.
<	Analyte not detected at or above the reporting limit.	M	MS recovery outside control limits; LCS acceptable.
C	Sample received in an improper container for this test.	P	Chemical preservation pH adjusted in lab.
D	Surrogates diluted out; recovery not available.	Q	Result was determined by a GC/MS database search.
E	Estimated result; concentration exceeds calibration range.	S	Analysis was subcontracted to another laboratory.
G	Surrogate recovery outside control limits.	T	Result is less than three times the MDL value.
H	Analysis or extraction holding time exceeded.	W	Reporting limit elevated due to sample matrix.
I	ICVS % rec outside 95-105% but within 90-110%		
J	Estimated result; concentration is less than routine RL but greater than MDL.	N	Analyte is not part of our NELAC accreditation or accreditation may not be available for this parameter.
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.

Receipt
The samples were received on 3/20/2025 12:38 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.3º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The method blank for preparation batch 500-810724 and analytical batch 500-811158 contained DRO (C10-C28) above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 8015D: The method blank for preparation batch 500-810724 and analytical batch 500-811064 contained Diesel Range Organics [C10-C28] above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB61p (17.5-20) (500-265540-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method D2974-87:
A correction factor of 0.58 was applied to the calculation of FOC by nelson and sommers

SB78 (10-12.5) (500-265540-3), SB90 (0-3) (500-265540-4) and (500-265540-D-3 DU)

Method D2974-87: The sample duplicate precision for the following sample associated with (500-265540-D-3 DU) was outside control limits: (500-265540-D-3 DU)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 3/21/2025 4:52 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was -0.7º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB21N (10-15) (500-265641-4). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 3/21/2025 4:52 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was -0.7º C.

GC/MS VOA
Method 8015D: Surrogate recovery for the following sample was outside control limits: SB141a (7.5-10) (500-265642-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB141a (7.5-10) (500-265642-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8015D: The following sample was diluted to bring the concentration of target analytes within the calibration range: SB141a (7.5-10) (500-265642-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
500-265962-1

Receipt
The samples were received on 03/28/25 15:14. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.5º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB70L (15-17.5) (500-265962-1), SB70N (12.5-15) (500-265962-3) and SB70O (12.5-15) (500-265962-5). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8015D: o-Terphenyl surrogate recovery for the following sample was outside control limits: SB70M (15-17.5) (500-265962-2). 2-Fluorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 03/25/25 11:42. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.6º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB61s(15-17.5) (500-265731-2) and SB61t(15-17.5) (500-265731-3). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative

Receipt
The sample was received on 03/27/25 11:52. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC) COC lists sample ID as SB70i (10-15) however container labels list SB70i (12.5-15). Logged per COC.

GC/MS VOA
Method 8015D: Surrogate recovery for the following sample was outside control limits: SB70i (10-15) (500-265866-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB70i (10-15) (500-265866-1). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
500-265868-1

Receipt
The samples were received on 03/27/25 11:52. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB70k (10-15) (500-265868-4). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
500-266010-1

Receipt
The samples were received on 03/31/25 11:16. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.7º C.

Receipt Exceptions
Received both samples with the same ID of SB70p, per the client SB70q is the aromatic sample.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The continuing calibration verification (CCV) associated with batch 500-812677 recovered above the upper control limit for Oil Range Organics (C28-C36). The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated sample is impacted: SB70p (15-17.5) (500-266010-1).

Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB70q (15-17.5) (500-266010-2). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
Method 3541: Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: SB70q (15-17.5) (500-266010-2). The reporting limit (RL) has been adjusted proportionately.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt
The samples were received on 04/01/25 12:25. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 5.2º C.

Receipt Exceptions
Received both bottles for sample 1 with ID of SB71a (15-17.5), logged per COC.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB70s (15-17.5) (500-266043-2). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 04/02/25 11:35. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.2º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The continuing calibration verification (CCV) associated with batch 500-812677 recovered above the upper control limit for Oil Range Organics (C28-C36). The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The associated sample is impacted: SB70U (15-17.5) (500-266123-1).

Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB61V (15-17.5) (500-266123-3). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: o-Terphenyl surrogate recovery for the following sample was outside control limits: SB70W (15-17.5) (500-266123-5). 2-Fluorobiphenyl surrogate was within the control limits; therefore, re-extraction and/or re-analysis was not performed.

Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB70X (15-17.5) (500-266123-6). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

Method 8015D: The following sample required a dilution due to the nature of the sample matrix: SB70V (15-17.5) (500-266123-2). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Narrative
500-266273-1

Receipt
The samples were received on 04/04/25 11:50. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.0º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB70y(15-17.5) (500-266273-1) and SB61x(15-17.5) (500-266273-2). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt
The samples were received on 4/8/2025 11:05 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA
Method 8015D: The following samples required a dilution due to the nature of the sample matrix: SB61z (15-17.5) (500-266457-1) and SB21r (10-15) (500-266457-4). Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Revision
The report being provided is a revision of the original report sent on 4/25/2025. The report (revision 1) is being revised due to: The report and EDD have been revised to report the VOCs, SVOCs, and Pesticides to the MDL per client request,.

Receipt
The sample was received on 4/9/2025 3:12 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.7º C.

Receipt Exceptions

GC/MS VOA
Method 8260D: The continuing calibration verification (CCV) analyzed in batch 500-813322 was outside the method criteria for the following analyte(s): chlorobenzene, chloroform, 1,1,2-trichloroethane, methyl tert-butyl ether, 2-butanone, toluene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8260D: The following analyte(s) recovered outside control limits for the LCSD associated with analytical batch 500-813322: toluene. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA
Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-813600 was outside the method criteria for the following analyte(s): Hexachlorocyclopentadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-813600 was outside the method criteria for the following analyte(s): Dibenz(a,h)anthracene and Di-n-octyl phthalate. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in batch 500-813691 was outside the method criteria for the following analyte(s): Hexachlorocyclopentadiene. A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270E: The continuing calibration verification (CCV) analyzed in 500-813691 was outside the method criteria for the following analyte(s): Dibenz(a,h)anthracene and Indeno[1,2,3-cd]pyrene. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA
Method 8081B: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following sample: SB145 (0-3) (500-266534-1).

Method 8081B: The following sample was diluted due to the nature of the sample matrix: SB145 (0-3) (500-266534-1). Elevated reporting limits (RLs) are provided.

Method 8082A: The %RPD between the primary and confirmation column exceeded 40% for PCB-1254 for the following sample: SB145 (0-3) (500-266534-1). The lower value(s) has been reported and qualified in accordance with the laboratory's SOP.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 500-266534-1 (Continued) Eurofins Chicago

General Chemistry
Method 9012B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 500-813910 and analytical batch 500-814069 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 9012B: The following sample(s) was analyzed outside of analytical holding time due to laboratory error.
SB145 (0-3) (500-266534-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Received 16oz soil jar with two different sample IDs-client paper label list SB4 (0-3) and soil lid list SB5 (0-3). Already received soil jar for SB4 (0-3) with paper label and lid matching. Logged jar per sample ID on lid (SB5 0-3). Received two sets of voas with same ID of SB4 (0-3). For the SB4 (0-3) true sample client wrote in blue ink, and the other "SB4 (0-3)" being logged as SB5 (0-3) client wrote in black ink. This set was also packaged with other SB5 sample vials.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
F1	MS and/or MSD recovery exceeds control limits.
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL, and the absolute difference between results is < the upper reporting limits for both.
H	Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
