Annual Compliance Report 2024

Introduction

Each year, the Illinois Environmental Protection Agency (Illinois EPA) provides citizens and the United States Environmental Protection Agency (U.S. EPA) a report on the status of public drinking water in Illinois. This report provides both an assessment of Public Water Supply compliance with standards set in the federal Safe Drinking Water Act and insights about current challenges faced by public water suppliers.

Protecting water sources, treating the water, and testing the water after it is treated are parts of the multi-barrier approach that assure an adequate supply of water that is safe to drink. Protecting and supplying safe water depends on many organizations and individuals. While the Illinois EPA administers and enforces the provisions of the federal Safe Drinking Water Act (SDWA) on behalf of the U.S. EPA, we rely on our partners in areas including government, industry, and non-profit organizations, to take an active role and contribute to this work. As always, the aim of this Report is to provide a clear picture of the successful efforts to protect the quality of public drinking water in Illinois.

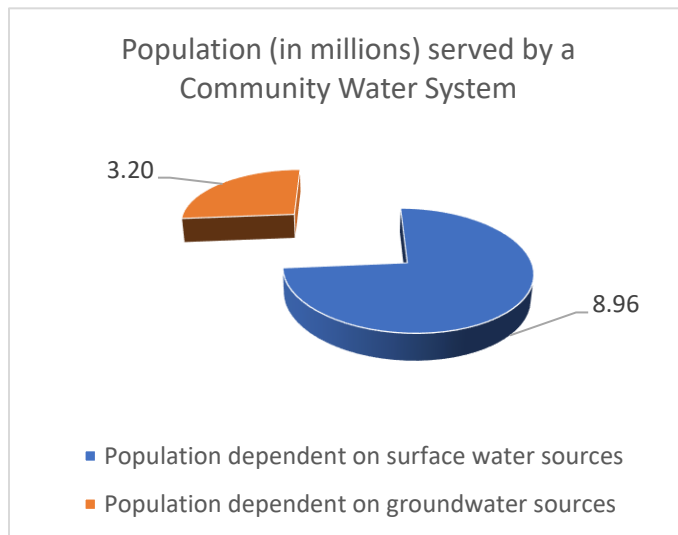

In Illinois, regulatory oversight of Public Water Systems (PWS)¹ is shared by the Illinois EPA and the Illinois Department of Public Health (IDPH). The Illinois EPA was designated as Illinois' primary enforcement authority by the U.S. EPA on August 29, 1979. The Illinois EPA, through an Intergovernmental Funding Agreement, has empowered IDPH to administer the Non-Community PWS Program, while the Illinois EPA retains regulatory authority over Community Water Systems (CWS)².

1 PWS serve 15 service connections or 25 residents.

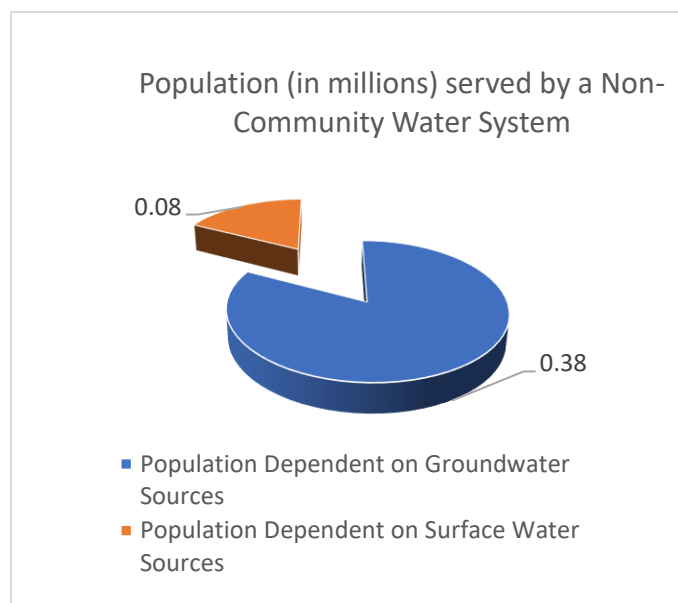

2 CWS serve 15 or more year-round service connections or 25 or more year-round residents.

The Illinois EPA regulates 1,868 active CWS. This number includes 106 supplies that meet the exemption criteria under 35 Ill. Adm. Code Part 611.100(d).

Currently, 1,183 CWS use groundwater sources and 685 use surface water sources or groundwater sources under the direct influence of surface water. 880 CWS purchase water from another CWS. A total of 12,152,804 persons are served by CWS in Illinois. By population, 38.36 percent are served directly from surface water systems, 35.34 percent are served by purchased surface water, 24.03 percent are served by groundwater systems, and 2.27 percent by purchased groundwater systems. It is worth noting that although only 26 percent of the population is served by groundwater (including groundwater purchase systems), groundwater dependent systems comprise about 63 percent of the total number of CWS.

Transient Non-Community (TNC) PWS served a population of 287,992 in 2024, while Non-Transient Non-Community (NTNC) PWS served a population of 168,961. A total of 377,977 persons are served by non-community PWS using groundwater, while 78,976 persons are served by non-community PWS using surface water.

Statutory Background

The program to protect PWS in Illinois began in 1915 and has undergone considerable legal and regulatory restructuring over the years. In 1970, the Illinois General Assembly formulated the Illinois Environmental Protection Act (Act), 415 ILCS 5. Title IV of the Act states that: “state supervision of public water supplies is necessary in order to protect the public from disease and to assure an adequate source of pure water for all beneficial uses,” and that “it is the purpose of this Title to assure adequate protection of public water supplies.” The General Assembly also adopted the Illinois Groundwater Protection Act (IGPA), 415 ILCS 55/1, in 1987. Additionally, the Illinois Pollution Control Board (IPCB) adopted regulations to protect groundwater as part of the Water Quality Standards for waters in Illinois (35 Ill. Adm. Code Part 302). In 1991, the IPCB adopted comprehensive groundwater quality rules (35 Ill. Adm. Code Part 620).

The core mission of the Illinois EPA’s Division of Public Water Supplies (DPWS) is to ***assure that all persons served by community public water supplies receive water that is safe in quality, clean, adequate in quantity and of satisfactory mineral character for ordinary domestic consumption.*** To accomplish this goal, the DPWS oversees the design, construction, and operation of CWS in Illinois. More specifically, the Illinois EPA reviews the safety and protection of drinking water source water, implements a permitting program for the design, construction, and operation of CWS treatment facilities, and maintains a surveillance program of water systems’ untreated and treated waters.

To support these activities, the DPWS has been staffed by a diverse contingent of engineers, geologists, and scientists that comprise the Compliance Assurance (CAS), Field Operations (FOS), Groundwater (GWS), and Permit (PS) Sections. The DPWS is further supported by the Infrastructure and Financial Assistance Section (IFAS) in the Bureau of Water (BOW), the Illinois EPA Division of Legal Counsel, the Illinois EPA Division of Laboratories, the Illinois Department of Central Management Services and the Illinois Department of Innovation and Technology.

As mentioned previously, the IDPH supports the NCWS program through a series of rules including the Illinois Plumbing Code (77 Ill. Adm. Code 890), the Illinois Water Well Construction Code (415 ILCS 30), the Surface Source Water Treatment Code (77 Ill. Adm. Code 930), and the Drinking Water Systems Code (77 Ill. Adm. Code 900). The IDPH’s Division of Environmental Health works to reduce the incidence of disease and injury related to environmental factors that fall within five major areas of responsibility: rulemaking, plan reviews and construction permits, inspections, vocational and facility licensing, and engineering and toxicological reports.

To support these areas of responsibility within the NCWS program, IDPH has field staff located in the IDPH’s six Regional Offices (RO) and leverages the resources of Local Health Departments (LHD). Compliance assurance and engineering services are generally conducted by staff located in the Central Office in Springfield. Consistent with the

requirements of the SDWA, program activities include sanitary surveys, water analysis and reporting, plan review, technical assistance, and training and education.

Under the SDWA and subsequent amendments, the U.S. EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs). For some regulations, treatment techniques (TT) are established in lieu of MCLs to control unacceptable levels of contaminants in water. The SDWA also requires PWS to notify their consumers when they have violated these regulations. These consumer notifications must provide an understandable explanation of the nature of the violation, its potential adverse health effects, steps that the PWS is undertaking to correct the violation, and the possibility of using alternative water supplies during the violation.

Through the ongoing review of Illinois EPA's programs, the U.S. EPA has granted the Illinois EPA primary enforcement authority, referred to as primacy, to determine the frequency of monitoring and reporting on the contaminants present in CWS' water. Generally, the larger the population served by a water system, the larger the number of samples collected and the more frequent the monitoring and reporting requirements. Additionally, the U.S. EPA supports the development of new MCLs by requiring CWS to monitor and report on currently unregulated contaminants through the Unregulated Contaminant Monitoring Rule. As data are acquired for these contaminants, scientific analyses are conducted to determine the need for development of new MCLs.

In 1998, the Illinois EPA began granting CWS revolving loans through a partnership with the U.S. EPA and the federal government. In 2024, the total Public Water Supply Loan Program (PWSLP) funding was \$357.6 million. This included \$251.1 million for drinking water system loans, \$89.0 million for lead service line replacements, and \$17.5 million for projects addressing emerging contaminants. To date, the Illinois EPA has made more than \$3.5 billion in revolving loans to water systems. This money has been issued to PWS throughout the State to maintain compliance and improve drinking water infrastructure.

Overview of the PWS Programs in Illinois

Community Public Water Supply Surveillance Program

To sustain compliance with regulatory requirements and ensure the safety of Illinois CWS consumers, the Illinois EPA is committed to completing engineering evaluations (sanitary surveys) as frequently as possible. The DPWS has found that the more frequent the contact between the Illinois EPA and CWS, the higher the percentage of compliant water systems.

The focus of the Illinois EPA's inspections of CWS continues to be an evaluation of the general operation and maintenance practices at the respective systems. Inspectors evaluate each CWS's compliance with Illinois Pollution Control Board rules and various ancillary programs that affect the CWS, such as the regulations under the Title IV: Drinking Water Security and Safety of the *Public Health Security and Bioterrorism Preparedness and Response Act of 2002* (Public Act 107-188, June 12, 2002). Fundamental aspects of these inspections also revolve around the provision of capacity development, technical assistance, identification of significant deficiencies, and necessary corrective actions to ensure the safety of drinking water supplies. The engineering evaluations include an on-site review of the eight components of the sanitary survey, including source, treatment, distribution system, finished water storage, pumps, monitoring and reporting, management and operation, and operator compliance assessments. The DPWS conducts surveillance and inspections at CWS from six Regional Offices located in Rockford, Elgin, Champaign, Springfield, Collinsville, and Marion.

Field Operations Section (FOS)	
Chris Johnston, P.E., (Acting) Manager	
Champaign Regional Office	Springfield Regional Office
Chris Johnston, P.E., (Acting) Manager	John Bartolomucci, EPE IV, Working Supervisor
Matt Talbert, P.E, Environmental Protection Engineer (EPE) IV	Michael Dragovich, EPE III

Gopi Ramanathan, EPE III	
Fei Zhao EPE III (start date June 2024)	
Maurine Goodyear, Admin Support (start date August 2024)	

U.S. EPA has established that state primary enforcement programs should complete sanitary surveys of the CWS in their state on a 3-year frequency. In 2024, the Illinois EPA conducted 563 sanitary surveys.

Non-Community Public Water Supply Surveillance Program

The NCWS Surveillance Program shares many commonalities with the CWS surveillance activities. Sanitary surveys review the adequacy of the water system's source of water, facilities, equipment, operation, and maintenance to ensure the production and distribution of safe drinking water. Sanitary surveys for NCWS are intended to identify and correct significant deficiencies and are conducted once every two years by the IDPH or LHD field staff. IDPH Field Offices are located in Rockford, Peoria, Champaign, Marion, Edwardsville, and West Chicago. There are 93 LHDs throughout the State that help conduct NCWS surveillance and perform sanitary surveys. IDPH regional office staff and LHD staff that perform sanitary surveys generally work in several Public Health Surveillance Programs and many times conduct multiple program inspections while visiting a NCWS. IDPH Policy sets a goal for completing sanitary surveys once every two years. In 2024, the IDPH conducted 1,517 sanitary surveys.

Community Public Water Supply Compliance Assurance Program

To ensure Illinois CWS are in compliance with State and federal statutes and regulations, the IPCB adopts identical in substance regulatory provisions from the U.S. EPA, pursuant to Section 7.2 of the Act. The core mission of the CAS is to ensure that CWS are in compliance with these regulations. Additionally, CAS coordinates technical outreach to water systems to assure proactive compliance measures are taken ahead of formal enforcement. The DPWS conducts compliance efforts for CWS from the Central Office in Springfield.

Compliance Assurance Section (CAS)
Tatum DeMay, Manager
David Saladino, Environmental Protection Specialist (EPS) III
Adam Nutt, EPS III
Sara Parmenter, EPS III
Mandy Trader, EPS III
Jasmine Hatcher-Moorman, EPS I
Kathryn Capranica, EPS I
Justin Burge, EPS I
Blake Marr, Life Sciences Career Trainee (LSCT, start date August 2024)
Elizabeth Wright, LSCT (start date August 2024)
Kristen Zanon, LSCT (start date August 2024)

Non-Community Public Water Supply Compliance Assurance Program

IDPH also tracks water system compliance with state and federal statutes and regulations. All NCPWS monitor at least annually for total coliform bacteria and nitrate. NTNCWS are also tested for contaminants, such as pesticides, solvents, lead and copper, arsenic, metals, and disinfection by-products. Responsibility for tracking water system compliance is shared by Regional and Central Office staff. Data tracking activities are conducted by Central Office Staff.

IDPH Non-Community Water Supply Program

Jennifer Krick, EHS II
Benjamin Koester, EHS II
Maria Crain, Administrative Assistant

Community Public Water Supply Operator Certification Program

The Illinois Public Water Supply Operations Act (415 ILCS 45) establishes the statutory basis for the CWS operator certification program in Illinois. This statute further establishes a reliable mechanism for Illinois EPA communications with CWS, ensuring that Responsible Operators in Charge (ROINC) supervise the portions of the CWS for which they are accountable, and requiring the timely submittal of information that the Illinois EPA relies upon to protect drinking water quality. This statute provides the basis for the regulatory requirements found in 35 Ill. Adm. Code Part 681. The most recent amendments to this Part became effective in 2017. These revisions further defined the experience requirements to become a licensed water supply operator in Illinois.

The Illinois EPA would also like to make note of our training partners. The operator training opportunities provided by the Environmental Resources Training Center at Southern Illinois University Edwardsville, Illinois Potable Water Supply Operators Association, Illinois Rural Water Association, Illinois Section of the American Water Works Association, and two-year colleges are critical to the successful treatment of potable water in Illinois. Whether large conferences, webinars, semester long classes, regional forums, or water system specific curricula, these educators, associations, and individuals have afforded opportunities to water professionals in Illinois that are unparalleled across the country.

The Illinois EPA's CWS Operator Certification Program is administered by the CAS of the DPWS. The Operator Certification Program is coordinated by a staff member from the CAS of the DPWS:

Illinois EPA Operator Certification Unit
Tatum DeMay, Manager
Katherine Andring, EPS III
Corinne Cullina, EPS II

Non-Community Public Water Supply Operator Certification Program

The IDPH NCWS program administers a program to properly credential NTNCWS from the Central Office in Springfield. The IDPH uses the services of the Water Quality Association to conduct initial Operator Certification Training and administer certification examinations. The following IDPH Environmental Health Services staff is actively involved in the administration of the program:

IDPH Operator Certification Personnel
Eric Portz, P.E., Safe Drinking Water Program Manager - Non-Community Water Supplies
Maria Crain, Administrative Assistant

Community Public Water Supply Capacity Development Program

The 1996 SDWA required all states to develop and implement a new system program and existing system strategy for capacity development. Subsequently, Illinois had to ensure that all new CWS and all new NTNCWS commencing operation after October 1, 1999, had adequate technical, managerial, and financial (TMF) capacity before commencing operation. Illinois adopted regulations to implement this requirement which can be found in 35 Ill. Adm. Code Part 652 and 77 Ill. Adm. Code Part 900. Illinois also had to develop and implement a strategy to help all existing CWS and NTNCWS achieve and maintain TMF capacity beginning October 1, 2000. Illinois submitted a Capacity Development Strategy for existing public water supplies in July 2000 to the U.S. EPA and the strategy was approved by the U.S. EPA on September 27, 2000. Illinois' Revised Capacity Development Strategy was approved by the U.S. EPA on May 24, 2023.

It is difficult to estimate the full-time equivalents devoted to this program as it is integrated into all aspects of the drinking water program. In several recent U.S. EPA evaluations of the Illinois Capacity Development Program, U.S. EPA has expressed concerns that this program is understaffed. The Capacity Development program is now coordinated by a staff member from the Permit Section of the DPWS, and Illinois EPA intends to create a Capacity Development Section in the coming months. This section will be comprised of a section manager and three regional capacity development coordinators. Current Capacity Development program staff is:

Illinois EPA Capacity Development Personnel
--

Non-Community Public Water Supply Capacity Development Program

The Safe Drinking Water Program Manager coordinates Capacity Development Program activities at IDPH. Currently, the Program Manager reviews new NTNC Public Water System Construction Permit Applications and performs capacity reviews on these new systems. When capacity reviews are needed at existing NTNC Public Water Systems, the Program Manager coordinates the reviews with water system personnel and RO/LHD field staff.

Cross-Connection Control Program

The Cross-Connection Control Program in Illinois is one of several tools intended to protect water consumers in the state. Statutes in Illinois establish that no person can threaten a water supply and water supply officials are responsible for protecting their water mains from connections that have the potential to allow the backflow of contaminants into their respective distribution systems (a cross-connection). 35 Ill. Adm. Code Part 604 Subpart O specifies requirements for an adequate Cross Connection Control Program and certification requirements for Cross-Connection Control Device Inspectors.

Water supplies in Illinois have significant partners in the implementation of their Cross-Connection Control Program. While it is up to the Illinois EPA to ensure that CWS have viable programs through physical inspection of water treatment facilities and documentation reviews, the IDPH deals with the plumbing aspects of the program.

Through contractual agreement with the Illinois EPA, the Environmental Resources Training Center (ERTC) located at Southern Illinois University Edwardsville provides the training and certification of Cross-Connection Control Device Inspectors (CCCDI). While any Illinois licensed plumber can inspect plumbing, or install a backflow device or assembly, only an Illinois CCCDI can test that device or assembly. Additionally, the ERTC tracks continuing education requirements and renewal of CCCDI certifications. ERTC has one full-time staff dedicated to CCCDI certification. However, it is difficult to estimate the full-time equivalents devoted to this program, as the Cross-Connection Control Program is an integral piece of the DPWS program in Illinois.

Groundwater and Source Water Protection Program

The Groundwater and Source Water Protection Program in Illinois is framed by Public Acts 83-1268 and 85-063, and the SDWA Section 1453. These laws amended the Act, created the IGPA, and led to the development of IPCB regulations for groundwater quality standards and protection requirements. The IGPA requires stakeholder input from the Interagency Coordinating Committee on Groundwater (ICCG) and Groundwater Advisory Council (GAC) on the development of groundwater protection programs, laws, and policies. The Act was amended to require the development and implementation of a

priority Regional Groundwater Protection Planning Program comprised of local stakeholders. Groundwater Section staff continue to maintain and participate in the four Regional Groundwater Protection Planning Committees by attending meetings, appointing new committee members, and providing nominal funding agreements. In August of 2019, 35 Ill. Adm. Code Part 604 Subpart C: of the Board regulations required each CWS that treats surface or groundwater as a primary or emergency supply of water to develop a source water protection plan (SWP Plan). Illinois EPA has received SWP Plans from over eight hundred CWS located throughout the State, and the Groundwater Section is working to review these SWP Plans and anticipates having approved SWP Plans for all required CWS by the end of FFY 2026.

The DPWS source water protection initiatives are generally managed from the Central Office in Springfield and the Rockford Office by the Groundwater Section of the DPWS.

Groundwater Section (GWS)	
Chris Johnston, P.E., (Acting) Manager	
Source Water Protection Unit	Hydrogeology and Compliance Unit
Anthony Dulka, P.G., Manager	Vacant, Manager
Rebecca DeMay, Environmental Protection Geologist (EPG) III (Rockford Office)	Lauren Hunt, EPG III

Jason Selling EPE III	Gizelle Garcia, EPE III
Chris Kohrman, EPE III	
Gerard Zimmer, EPE III	

The Safe Drinking Water Program Manager conducts all permitting functions for NTNCWS from the Central Office in Springfield.

Personnel
Eric Portz, P.E., Safe Drinking Water Program Manager - Non-Community Water Supplies

Public Water Supply Loan Program

The Public Water Supply Loan Program is administered by the Illinois EPA's BOW-Infrastructure Financial Assistance Section (IFAS). IFAS also administers the Water Pollution Control Loan Program. IFAS manages all aspects of the funding process with input from the DPWS. Detailed program information is available on the Illinois EPA website at: <https://epa.illinois.gov/topics/grants-loans/state-revolving-fund.html>.

The procedures for issuing loans from the PWS Loan Program are specified under 35 Ill. Adm. Code 662. Generally, the first step toward the Illinois EPA working with an applicant to fund a project is the submittal of a planning report, called a Project Plan. An applicant must also complete a Project Planning Submittal Checklist identifying the location of other necessary information for application processing. Once a scope of work is identified in a Project Plan, IFAS staff will distribute the planning report to the DPWS PS and FOS for review and approval. CAS is also consulted to ensure funding is provided to address the loan applicant's most pressing needs. Once IFAS receives comments from each of these Sections, they send a review letter requesting any additional information that is needed or answers to any questions the Illinois EPA may have. IFAS then produces a Project Summary document, and the loan applicant will be required to either hold a public hearing (if the potential for environmental issues exists or if financial impacts to the loan applicant's residents are significant) or simply place an ad in the local newspaper announcing the proposed project and request for funding. The public hearing or ad placement is followed by a 10-day public comment period allowing for the submission of written comments concerning the proposed project. Once the public comment period is over and IFAS receives proof of the public notification in the newspaper and any responses to any public comments, the Illinois EPA will issue Planning Approval. Planning Approval is good for five years. Therefore, once a scope of work has been identified and approved, the loan applicant can pursue funding for any portion(s) of that scope within the following five years.

The Illinois EPA's revolving loan funding process is unlike that of a bank in the respect that the Illinois EPA does not offer the funding agreement until after the recipient has demonstrated a definitive need for the project, obtained Illinois EPA Planning Approval, obtained all necessary permits, demonstrated the means and ability to repay the funding, adopted all necessary ordinances, and then gone out to bid on the project. Once a "winning/low" bidder is identified, the Illinois EPA can issue the Loan Agreement followed by the loan applicant entering the contract for construction of the project. The Illinois EPA can fund the construction costs, as well as planning efforts, design engineering, and construction engineering/oversight. As of July 1, 2017, loan applicants can qualify for reduced interest rates (Small Community Rate and/or Hardship Rate) based upon their service population, median household income, unemployment rate and population trends. Loan applicants qualifying for the Small Community Rate or Hardship Rate also have the option of extending the term of their loan beyond the traditional 20 years, up to a maximum of 30 years, provided the term of the loan does not exceed the useful life of the funded project. Details on the fixed loan rate of a loan agreement and repayment periods can be found within 35 Ill. Adm. Code Part 662.

U.S. EPA has determined that lead service line replacement is an eligible loan expense. Following a legislative amendment, Illinois EPA IFAS processed its first lead service line replacement project in 2017.

For Lead Service Line Replacements (LSLR), Illinois EPA recently updated 35 Ill. Adm. Code Part 663. This rule change allows the Illinois EPA to issue LSLR funding at a 0 percent interest rate for all applicants. Communities that are deemed disadvantaged can qualify for a loan term up to 40 years. All other projects will qualify for a 30-year loan term. Future LSLR funding will be issued based on amendments to 35 Ill. Adm. Code Part 663 that occurred in early 2024.

Laboratory Certification

Illinois continues to provide a Laboratory Certification Program to certify commercial and municipal laboratories within the State for all regulated contaminants. An on-site audit of Illinois EPA's Primacy laboratory and Lab Accreditation Unit was conducted in April 2024. Full Certification is granted after all responses are accepted and is contingent upon the laboratory's continued demonstration of acceptable performance through the analysis of annual proficiency testing samples.

The IDPH's Laboratory and Accreditation Unit audit visit occurred in April 2024. Illinois continues to meet the elements of its Performance Partnership Agreement (PPA) with U.S. EPA.

- Illinois continues to audit all laboratories that produce results for compliance with SDWA at least once every two years and will meet all regulatory requirements.
- Illinois EPA's Division of Laboratories maintains a certification program and a certified State Lab for inorganic and organic contaminants of concern.

- IDPH maintains a certification program and a certified State Lab for bacteriological contaminants of concern.
- Illinois EPA and IDPH submit responses to annual questionnaires to U.S. EPA Region 5.
- U.S. EPA Region 5 tracks State commitments to conduct laboratory certification activities by the IDPH and the Illinois EPA's Division of Laboratories.

Compliance and Enforcement Management

Illinois EPA and IDPH maintain the required enforcement and compliance assistance programs. Illinois EPA issues Notices of Significant Deficiencies found within thirty days of completion of a sanitary survey, to which a response in the form of a Corrective Action Plan including a compliance schedule is required. When a system fails to meet the compliance deadlines contained in a Corrective Action Plan, Illinois EPA may issue a Violation Notice to the system, in accordance with Section 31 of the Illinois Environmental Protection Act, 415 ILCS 5/31. In addition, Illinois EPA may issue Violation Notices upon a system accruing eleven Enforcement Target Tool points, in accordance with U.S. EPA's 2009 Enforcement Response Policy, and when a system incurs MCL exceedance violations, two consecutive monitoring violations, a failure to issue Public Notice, Lead Consumer Notification Form, or Consumer Confidence Reports, among other violations. Once a Violation Notice has been issued, Illinois EPA may enter into a Compliance Commitment Agreement, which includes a schedule for returning to compliance, or may make a referral to the Office of the Illinois Attorney General for the filing of a civil complaint. Once a civil complaint has been filed, Illinois EPA works with the Attorney General's Office to obtain a Consent Order or judgment that requires the system to return to compliance in accordance with the required actions and deadlines.

Illinois and U.S. EPA Region 5 continue to implement data exchange to ensure that enforcement resources are targeted at the non-compliant PWS. Current and historical violation data³ and follow-up enforcement actions can be found at the following web site: <http://water.epa.state.il.us/dww/index.jsp>

Data Management and Reporting

Illinois EPA and IDPH maintain adequate data management systems (and update it for new rules and new versions of FedRep) that track requirements for all rules, which include the appropriate combination of hardware, software, and personnel to accurately identify the inventories (including routine updates of system information), maintain water quality monitoring information, and track compliance with all monitoring and reporting, MCL, MRDL, treatment technique, public notification, and public information requirements. Illinois continues to meet the elements of its PPA with U.S. EPA.

³ The data for this reporting originates and is maintained in the Illinois Safe Drinking Water Act Information System (SDWIS).

- Illinois EPA and IDPH continue to report to U.S. EPA actions and sample data quarterly and inventory data at least annually in accordance with 40 CFR 142.15.
- Illinois EPA and IDPH utilize SDWIS/State to manage water system compliance with all regulatory compliance concerns.
- U.S. EPA Region 5 tracks quarterly and annual data reporting requirements.

Operator Certification

Illinois continues to maintain regulations for the operation and maintenance of all public water systems by properly certified individuals. Illinois continues to meet the elements of its PPA with U.S. EPA. Illinois continues to report to U.S. EPA the status of the operator certification program on an annual basis. U.S. EPA Region 5 tracks completion of this report to avoid a 20 percent withholding of the Illinois Drinking Water Revolving Loan Fund grant should Illinois fail to meet this commitment.

Capacity Development

Illinois continues to work with existing PWS and required capacity demonstrations for new PWS to enhance water system technical, managerial, and financial capacity to operate in compliance with federal and State regulations.

Illinois EPA and IDPH continue to report the status of the Illinois Capacity Development Program to U.S. EPA on an annual basis. U.S. EPA Region 5 tracks completion of this report to avoid a 20 percent withholding of the Illinois Drinking Water Revolving Loan Fund grant should Illinois fail to meet this commitment.

Source Water Assessments and Protection

As previously stated, the IPCB approved updates to the SWP program in 35 Ill. Adm. Code Part 604 Subpart C, requiring CWS to prepare a SWP Plan that must be submitted to the Illinois EPA. SWP Plans must include the following minimum elements:

- a) Vision Statement as set forth in Section 604.310;
- b) Source Water Assessment as set forth in Section 604.315;
- c) Objectives set forth in Section 604.320; and
- d) Action Plan as set forth in Section 604.325.

The requirements of Part 604 Subpart C phased in the submission due dates for SWP Plans based on CWS population served, as follows:

- CWS serving a population greater than 50,000 persons: SWP Plans due by July 26, 2022;
- CWS serving a population between 49,999 persons and 3,000 persons: SWP Plans

due by July 26, 2023; or

- CWS serving a population of 2,999 persons or less: SWP Plans due by July 26, 2024.

The SWP Plans must be approved by the Illinois EPA based on the minimum required elements, listed above. As of Dec. 31, 2024, the Illinois EPA has received a total of approximately 802 SWP Plans from CWS. Illinois EPA anticipates that these efforts will significantly improve the number of CWS that have minimized risks to public health through substantial implementation of SWP Plans. Once the SWP Plan has been approved by the Illinois EPA, CWS must review, and revise as necessary, their SWP Plan no less than every five years, or when the system makes a change to their water source. The continued updates to SWP Plans will substantially provide additional protection of the source water utilized by CWS in the State.

Reporting Requirements

Each quarter, the Illinois EPA submits data to the Federal Safe Drinking Water Information System (SDWIS/Fed), an automated database maintained by the U.S. EPA. The data submitted by Illinois include, but are not limited to the following:

- PWS inventory information;
- incidences of violations of MCLs, MRDLs, monitoring, and TT violations;
- information on enforcement activity related to these violations; and
- source water protection information.

The Illinois EPA publishes a report on its website that contains information on permits issued during the previous year. The report includes CWS details regarding the construction and operating permit process, including milestones that measure program efficacy.

Measures and Indicators

Illinois continues to use quantitative measures developed by U.S. EPA Region 5 to regularly assess program performance (see Appendix G). These include, but are not limited to the following activities:

- Illinois continues to participate in semi-annual conference calls with U.S. EPA Region 5 to discuss national program measures, Region 5 specific shared goals, and special high priority queries.
- Illinois continues to provide information regarding lead action level exceedances upon request from U.S. EPA Region 5.
- U.S. EPA Region 5 continues to track the status of the Illinois Drinking water program with respect to national program measures, Region 5 specific shared goals, and special high priority queries.
- Public health concerns related to the Lead and Copper Rule (LCR) implementation

will remain a high priority area of focus.

Monitoring: What We Monitor and Why

Illinois CWS monitor for different types of contaminants. The number of samples and how often the testing is done depends on several factors. The type of contaminant also determines what actions are taken if unacceptable levels are found in the water.

Health-based compliance: In 2024, 97.3 percent of the population served by Illinois CWS received drinking water in compliance with all health-based requirements. Most non-compliance was for a short duration, and the potential for health risk was minimized through prompt corrective action by the water supplies. Supplies with microbial problems (bacterial or turbidity non-compliance) are required to issue boil orders when such violations occur. CWS with acute MCLs were limited to two (nitrate, nitrite, E. coli, and Surface Water Treatment Rule Treatment Technique violations) water systems.

Bacterial Contamination: Coliform monitoring is used as a general indicator of water quality in terms of potential microbial contamination. If coliform bacteria are not present, this is an indication that the system is adequately protected against contamination from other types of disease-causing organisms. However, if coliform bacteria are found in the water, it is assumed that the system may be compromised, and steps are taken to protect the people who consume the water.

Total coliform bacteria, without the detection of fecal coliform or E. coli, are generally not harmful. In these cases, the system will identify the source of the contamination, correct the problem, and thoroughly disinfect its system. The public will also be notified of the situation. However, unless unusual circumstances exist to cause particular concern about the safety of the water, a boil water notice would not be issued as would be if fecal coliform or E. coli were found.

Nitrate/Nitrite: CWS in Illinois are tested at least annually for nitrate, a chemical which may occur naturally in the environment but that can also enter the water from sources like fertilizer runoff, decaying plant and animal wastes, and sewage. Nitrate is a health concern primarily for infants under the age of six months. The infant's digestive system can convert the nitrate to nitrite, which can interfere with the ability of the infant's blood to carry oxygen. The result is a serious illness known as methemoglobinemia, or blue baby syndrome. Methemoglobinemia can be fatal if nitrate levels in the water are high enough and the illness is not treated properly.

The MCL for nitrate in drinking water is 10 parts per million (ppm). If a water system exceeds the standard, the public is notified and advised not to use the water for mixing infant formula or other uses that might result in consumption of the water by infants under six months of age. The advisory is kept in place until steps can be taken to reduce nitrate levels in the water. Possible remedial measures include treating the water to remove the nitrate or drilling a new water well.

Older children and adults are generally not at risk from drinking nitrate-contaminated water. Infants, the average adult consumes about 20-25 milligrams of nitrate per day in food, primarily from vegetables. Because of changes that occur after six months of age, the digestive tract no longer converts nitrate into nitrite. However, some adults—including people with low stomach acidity and people with certain blood disorders—may still be at risk for nitrate-induced methemoglobinemia.

Inorganic Chemicals: CWS in Illinois are tested for 13 other inorganic chemicals in addition to nitrate. If past results do not indicate the presence of inorganic chemicals, testing is usually done once every three years. Otherwise, it may be done as frequently as once a year. The list includes antimony, arsenic, barium, beryllium, cadmium, chromium, cyanide, fluoride, mercury, nickel, selenium, sulfate, and thallium. In some cases, these chemicals may be naturally present in the groundwater. If a water supply system were to exceed the MCL for one of these chemicals, the public would be notified, the monitoring schedule would be increased to quarterly, and appropriate steps would be taken to reduce levels of these chemicals in the water.

Radioactive Elements: CWS in Illinois are also usually tested once every three years, or as often as once a year, in some cases, for a list of radioactive elements. If past results do not indicate the presence of radioactive elements, testing is usually done once every nine years. If a system were to exceed the MCL for one of these radioactive elements, the public would be notified, the monitoring schedule would be increased to quarterly, and steps would be taken to reduce the levels of these elements in the water.

Disinfection By-Products: Disinfection rids drinking water of microbiological organisms, such as bacteria, viruses, and protozoa, that can cause and spread diseases. The most common method of disinfection is the addition of chlorine to drinking water supplies. Not only is chlorine effective against waterborne bacteria and viruses in the source water, but it also provides residual protection to inhibit microbial growth after the treated water enters the distribution system. This means the disinfectant continues working to keep the water safe as it travels from the treatment plant to the consumer's tap. However, chlorine also has the potential to form by-products that can produce harmful health effects. Chlorine can combine with organic materials in the raw water to create contaminants called trihalomethanes (THMs) and haloacetic acids (HAAs). Repeated exposure to elevated levels of THMs over a long period of time could increase a person's risk of cancer. The formation of disinfection by-products is a greater concern for water systems that contain organics or use surface water, such as rivers, lakes, and streams,

as their source. Surface water sources are more likely to contain the organic materials that combine with chlorine to form THMs and HAAs.

All CWS that add a disinfectant to the water are required to regularly test their treated water to determine if THMs and HAAs are present. If a water supply system were to exceed the MCL for THMs or HAAs, the public would be notified, the monitoring schedule would be increased to quarterly, and appropriate steps would be taken to reduce levels of these chemicals in the water.

Lead and Copper: All community and non-transient public water systems have been tested for lead and copper. CWS test water in a specified number of homes within each system to determine if the water exceeds the “action level” of 15 parts per billion (ppb) for lead or 1,300 ppb for copper. If a system exceeds the action level for lead or copper in more than 10 percent of the locations tested, it is required to take corrective action and conduct further testing. Current testing frequencies are based partly on the results of that initial round of testing and of the success of subsequent efforts to reduce risk of lead contamination in systems that have previously exceeded the action level.

Violations for Calendar Year 2024

The following table summarizes the number of CWS in violation with aspects of the drinking water compliance program during 2024. In the cases of a violation, a water system is required to take corrective actions. These actions include public notification to inform affected residents of the situation and if there are any special precautions they should take. In all cases noted here, residents were advised directly by the water system at the time the violation occurred. All CWS are required to note any violations in the Consumer Confidence Report they distribute to their residents.

Information on all violations in 2024 for CWS is in Appendix A, for TNCWS in Appendix B, and for NTNCWS in Appendix C. Illinois EPA and IDPH continue to address all systems out of compliance with state rules and regulations. Specifically, Illinois addresses non-compliant PWS that have a score of 11 or higher on the U.S. EPA’s Enforcement Targeting Tool report, in accordance with the U.S. EPA’s Enforcement Response Policy.

- As an enforcement option, Illinois may refer noncompliant PWS to U.S. EPA Region 5 or the Illinois Attorney General’s Office for follow-up action.
- Illinois EPA and IDPH continue to maintain all records relating to enforcement decisions.
- Illinois EPA and IDPH continue to produce an annual compliance report by July 1 of each year.
- U.S. EPA Region 5 tracks state commitments (which involves addressing with a formal enforcement action or return to compliance), the number of priority systems equal to the number of its PWS that have a score of 11 or higher on the Enforcement Targeting Tool report, and update Illinois quarterly.
- Illinois EPA and IDPH worked with U.S. EPA on the National Compliance Initiative.
