¹ CAS# = Chemical Abstracts Service Number.

² GU = General Use (Section 303.201); LM = Lake Michigan (Section 303.443).

³ "Aquatic Life" means native populations of fish and other aquatic life (Section 301.220). Acute criteria are not to be exceeded at any time, chronic criteria are not to be exceeded by the arithmetic average of at least four consecutive samples collected over a period of at least four days. Values enclosed by "()" were not calculated according to the

Substance	CAS# ¹	Use ²	Aquatic Life		Units ⁴	Date Derived ⁵ (yymmdd)	Human Health		Units ⁴	Date Derived ⁵ (yymmdd)	NPDES Permit ⁷
			Criteria ³				Criteria ⁶				
			<u>Acute</u>	<u>Chronic</u>			<u>HTC</u>	<u>HNC</u>			

regulations due to limited data, these values should only be used for advisory purposes such as establishing "reasonable potential". Values enclosed by "[]" are national criteria and should be used for advisory purposes only.

⁴ g/L = grams per liter; mg/L = 10⁻³ g/L; µg/L = 10⁻⁶ g/L; ng/L = 10⁻⁹ g/L; pg/L = 10⁻¹² g/L; fg/L = 10⁻¹⁵ g/L.

⁵ Date of most recent derivation or revision is listed, older criteria will be updated as new data becomes available.

⁶ HTC = Human Threshold Criterion (Section 302.642); HNC = Human Nonthreshold Criterion (Section 302.651). HTC are based on noncancerous effects; HNC are based on cancerous effects. Criteria are based on fish consumption and incidental exposure through contact or ingestion of small volumes of water while swimming or during other recreational activities for areas which are determined to be public access areas pursuant to Section 302.102(b)(3). All criteria are initially derived for protection of primary contact uses, values followed by "(G)" are criteria applicable to General Use waters whose physical configurations are not supportive of primary contact uses (302.202). Values followed by "(PWS)" are applicable to surface waters near a point of intake for public or food processing water supply (303.202). Human health criteria have been calculated for many more substances than are listed, but, since the values are much higher than those for Aquatic Life, they are not included.

⁷ These criteria have been used to derived Water Quality Based Effluent Limits at some time.

**** List last revised on 10/11/2019****
