Nitrate and Phosphorus Loads from Illinois Rivers

2023 Biennial Update

Timothy Hodson
Central Midwest Water Science Center
thodson@usgs.gov

with:

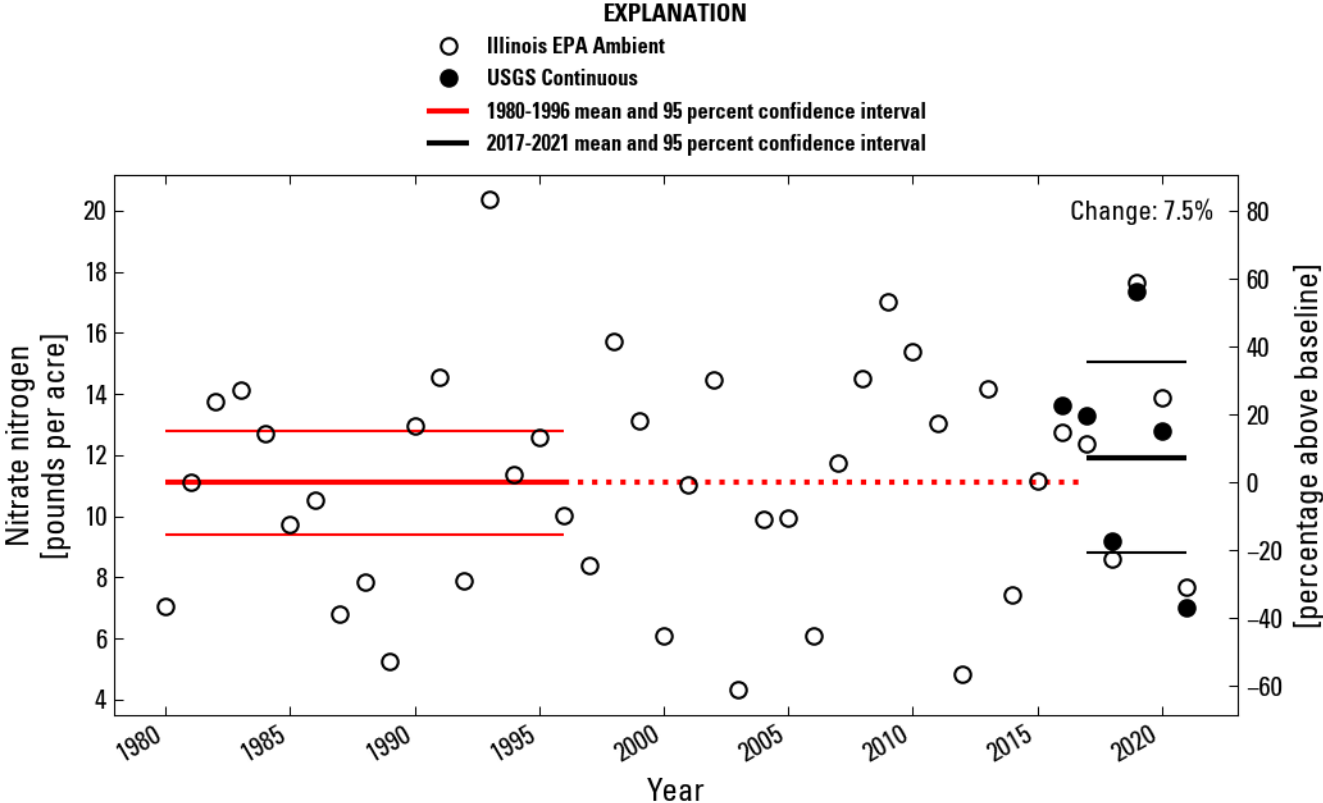

**Illinois Environmental
Protection Agency**

Methods

Estimate change in nutrient loads from Illinois' eight largest rivers

- *baseline*: loads during water years 1980–1996 estimated by periodic sampling
- *current*: loads during water years 2017–2021 estimated by continuous monitoring
- flow-adjusted loads: flow-weighted concentration multiplied by mean flow
- error bars estimate interannual variability

Statewide nitrate yield

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Statewide phosphorus yield

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in nitrate relative to baseline

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in nitrate relative to baseline

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in phosphorus relative to baseline

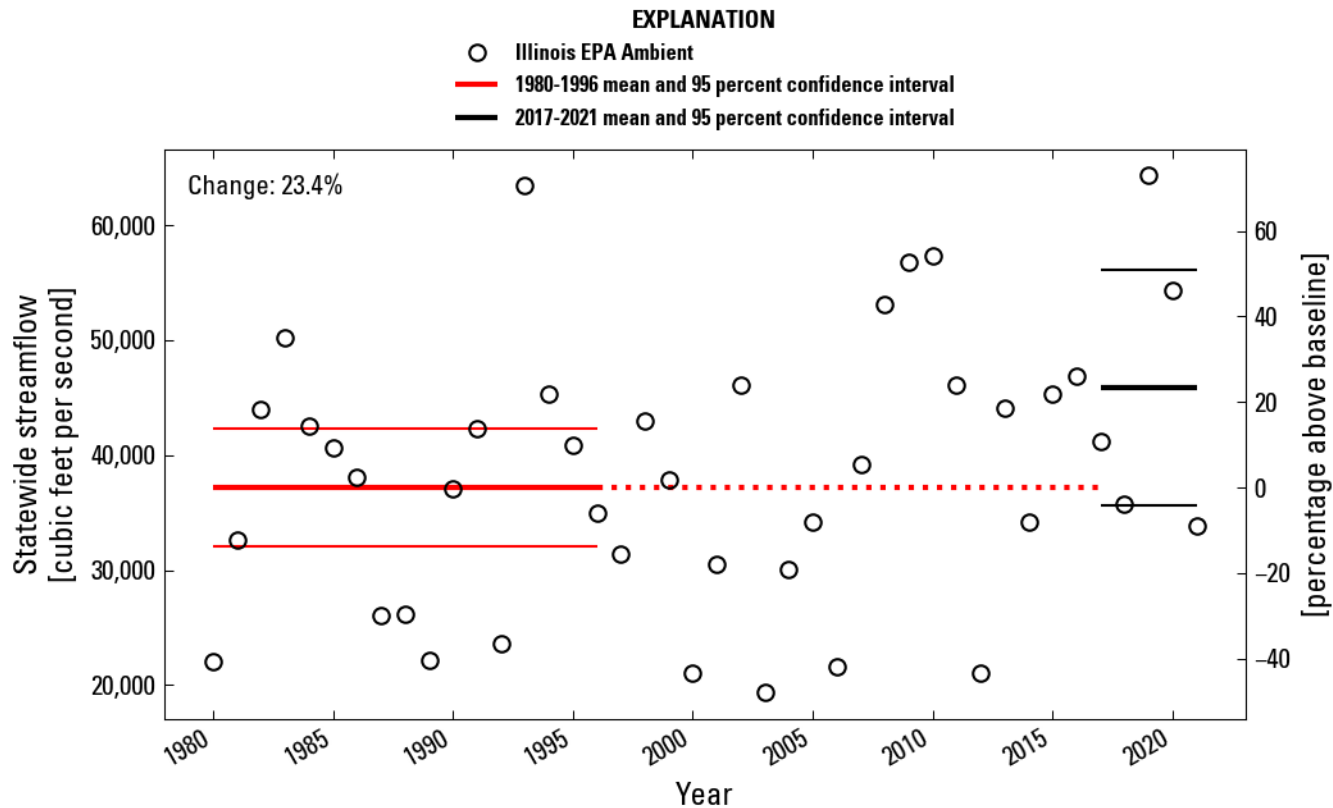

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in phosphorus relative to baseline

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Statewide streamflow

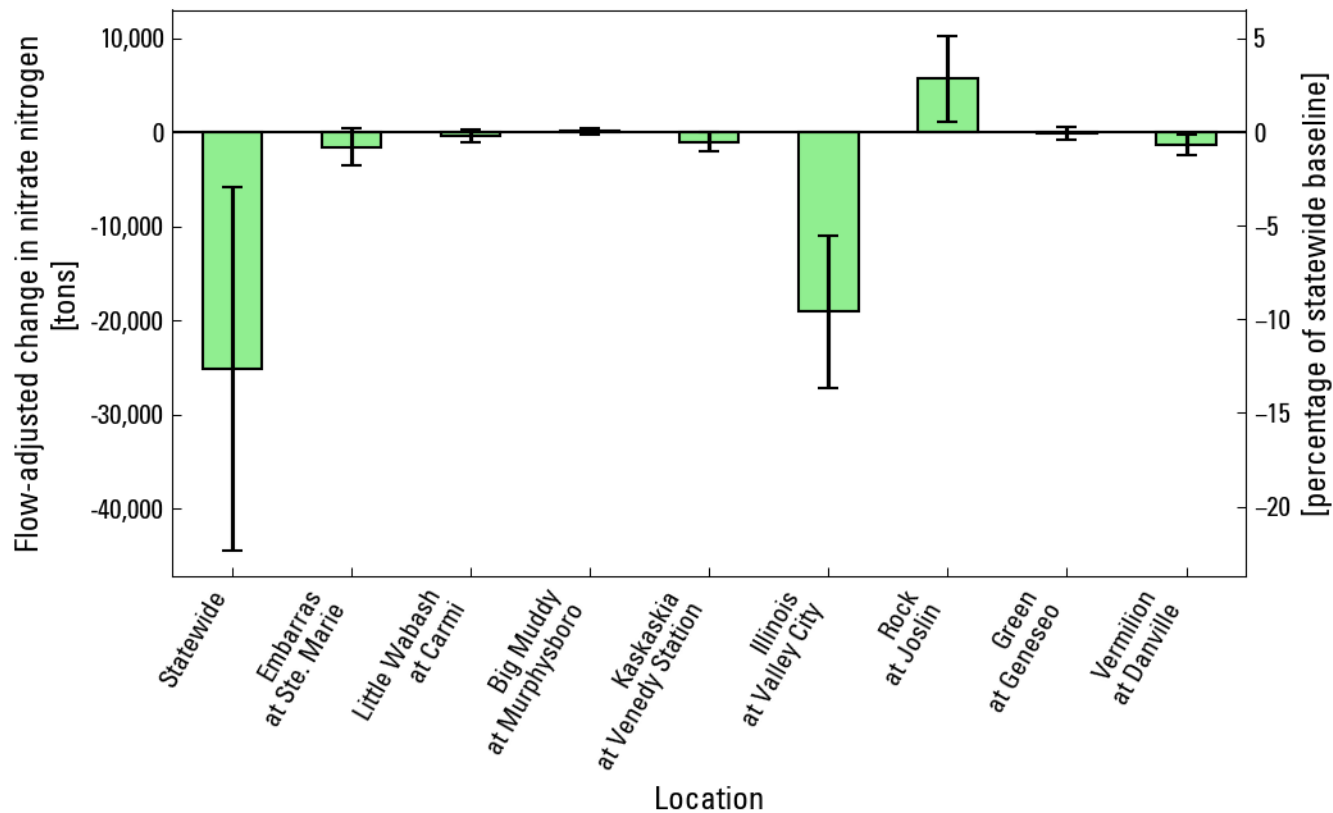

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in streamflow relative to baseline

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in flow-adjusted nitrate load

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in flow-adjusted phosphorus load

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in nitrate yield relative to baseline

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Change in phosphorus yield relative to baseline

Preliminary Information-Subject to Revision. Not for Citation or Distribution.

Summary

1. Nitrate load has increased 8% (40% to -25%).
2. Phosphorus load has increased 40% (70% to 10%).
3. While streamflow has increased 23% statewide.
4. On a yield basis, Illinois' nitrate trend is consistent with other major Mississippi River watersheds.
5. Illinois' phosphorus trend is second largest.
6. Large interannual variability.

Nutrient loads are increasing across the Mississippi River Basin. Is the cause changes in management, climate, or legacy effects?
