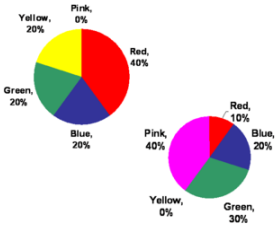
NMC Charges (Revised 10/26/15)

1. Coordinate the development and implementation of monitoring activities (e.g., collection, analysis, assessment) that provide the information necessary to:

   a. Generate estimations of 5-year running average loads of Nitrate-Nitrogen and Total Phosphorus *leaving the state of Illinois* compared to 1980-1996 baseline conditions; and
   b. Generate estimations of Nitrate-Nitrogen and Total Phosphorus loads *leaving selected NLRS identified priority watersheds* compared to 1997-2011 baseline conditions; and
   c. Identify Statewide and NLRS priority watershed *trends in loading over time* using NMC developed evaluation criteria.

2. Document *local water quality outcomes* in selected NLRS identified priority watersheds, or smaller watersheds nested within, where future nutrient reduction efforts are being implemented (e.g., increase in fish or aquatic invertebrate population counts or diversity, fewer documented water quality standards violations, fewer algal blooms or offensive conditions, decline in nutrient concentrations in groundwater).

3. Develop a *prioritized list of nutrient monitoring activities and associated funding* needed to accomplish the charges/goals in (1) and (2) above.



USGS Super Gage Operational Update and Web Display of Nutrient Information

GROUNDWATER ASSESSMENT FOR NITRATES

Nutrient Monitoring Council
September 13, 2016 Update

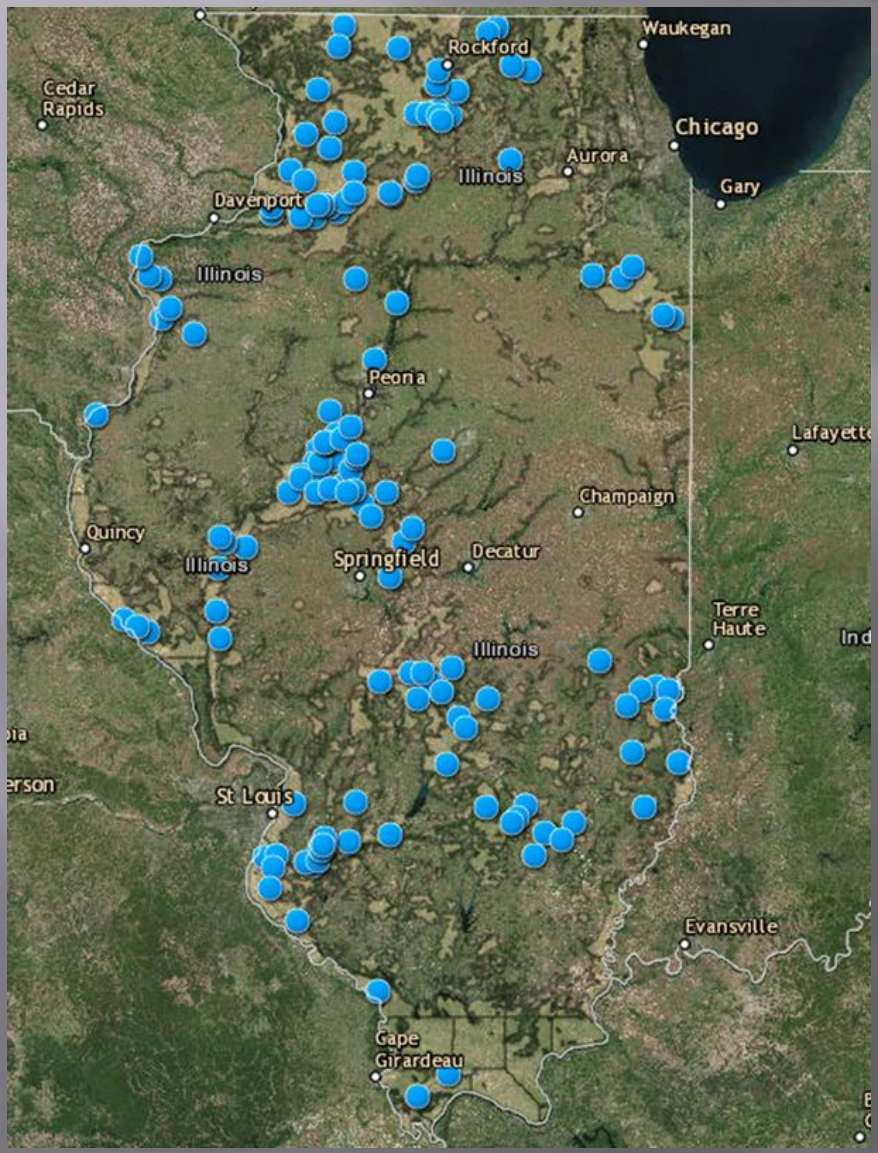
Rick Cobb, P.G.
Deputy Division Manager
Division of Public Water Supplies
and Manager, Groundwater Section

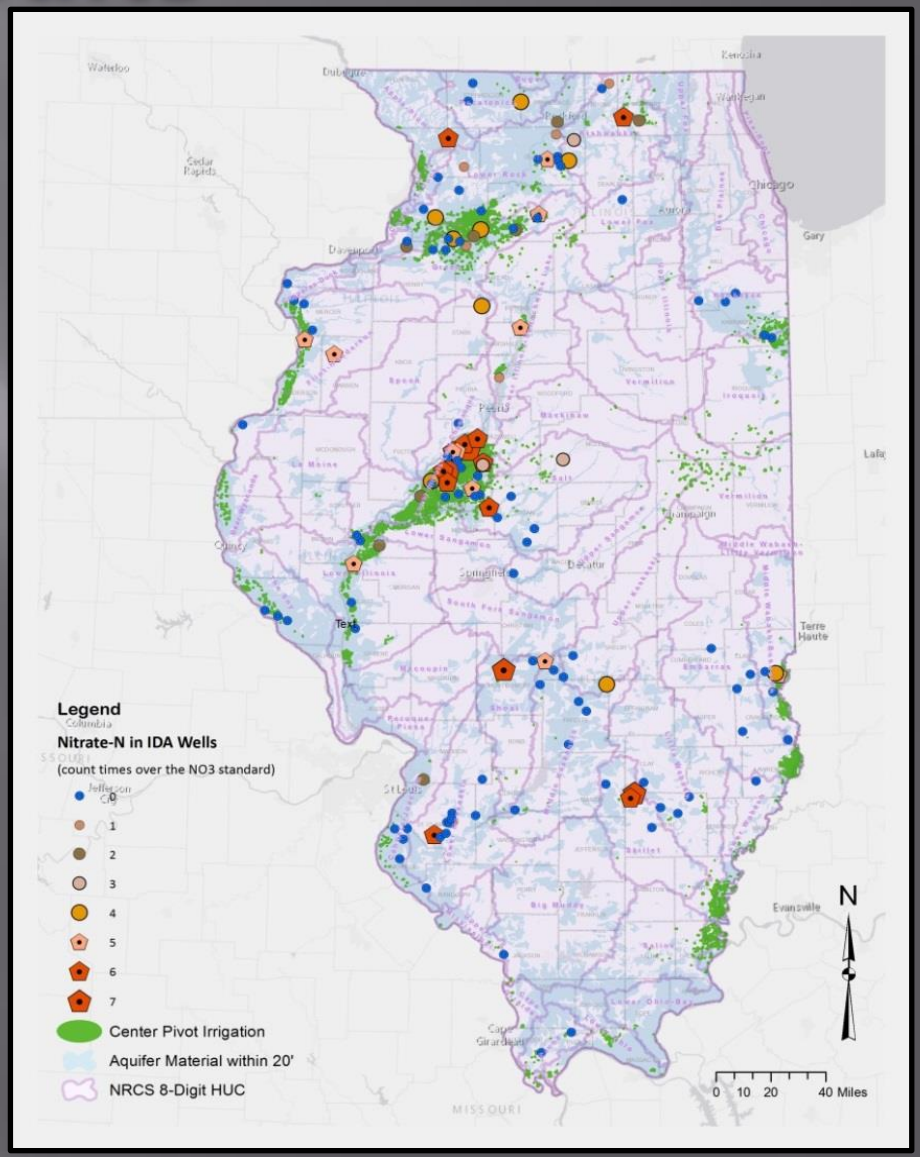
Illinois EPA

ICCG & GAC Coordinated GW Monitoring

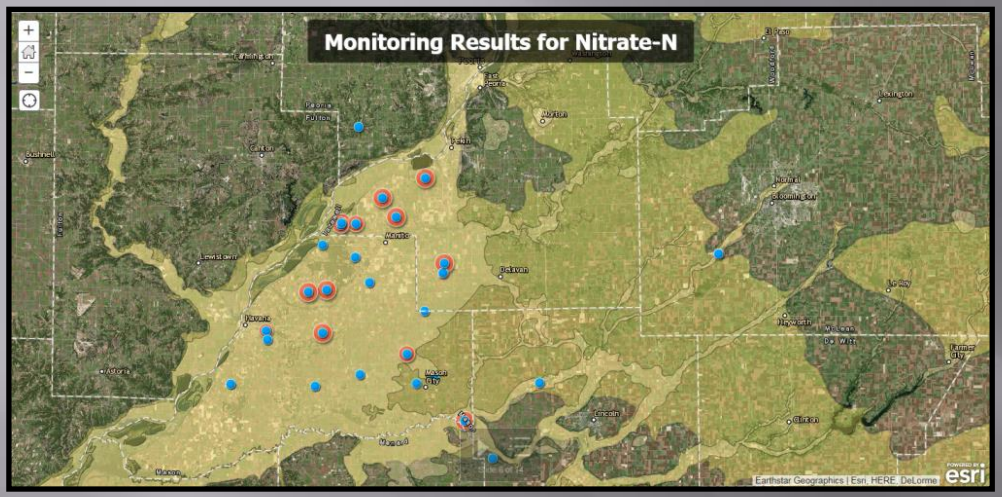
- An ongoing Illinois EPA nitrate trend study of Community Water Supply Wells (reported in the 2014 Integrated Water Quality Report require under the Clean Water Act); and
- The Illinois EPA received a Supplemental Clean Water Act Section 106 Monitoring Grant on July 19, 2016 from U.S. EPA Region V to begin the assessment of the nitrate hot spots in the Havana Lowlands.

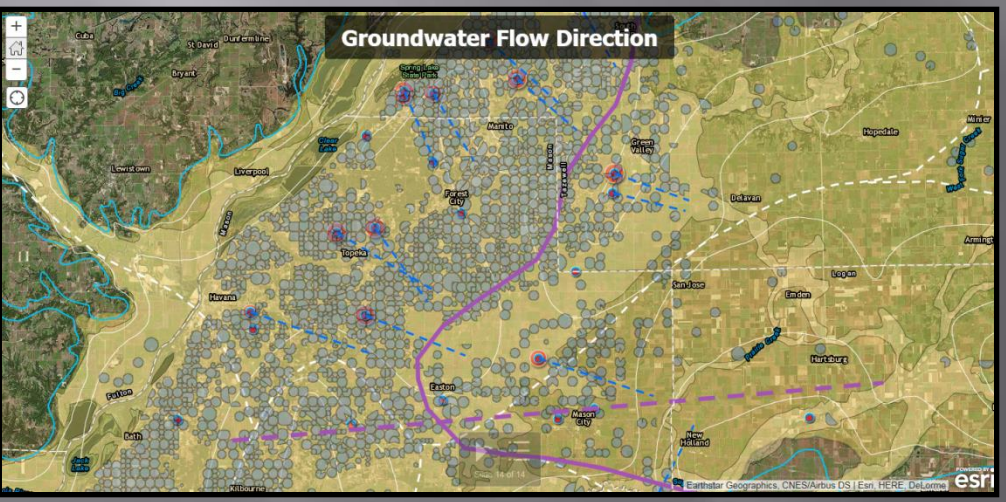
IDA Monitoring Network Nitrate Results





Havana Lowlands (HL)





- 99 of 212 (46.6 %) samples analyzed in the HL had Nitrate-N concentrations greater than the numerical Class I GWQS of 10 mg/L;
- 9.2 mg/L of Nitrate-N is the median value of the area; and
- The individual well with the highest detected concentrations of Nitrate-N ranged from 18 to 48 mg/L with a median value concentration of 32 mg/L.

Fertigation

- Means injection of fertilizers, soil amendments, and other water-soluble products into an irrigation system.

Section 106 Monitoring Grant

- This will help provide key beneficial NLRS information in assessing and managing nitrate in groundwater by:
  - Determining fluctuations in nitrate concentrations resulting from seasonal climatic changes or groundwater conditions such as dissolved oxygen or pH.
  - Assessing the amount of de-nitrification and source indication by conducting nitrogen gas and nitrogen isotope work.
  - Determining temporal nitrate concentrations resulting from agricultural practices such as irrigation or fertigation and possible best management practices that could mitigate these changes.

Exploring IEPA Ambient Water Quality Monitoring Network Data with Great Lakes To Gulf Virtual Observatory Part 2

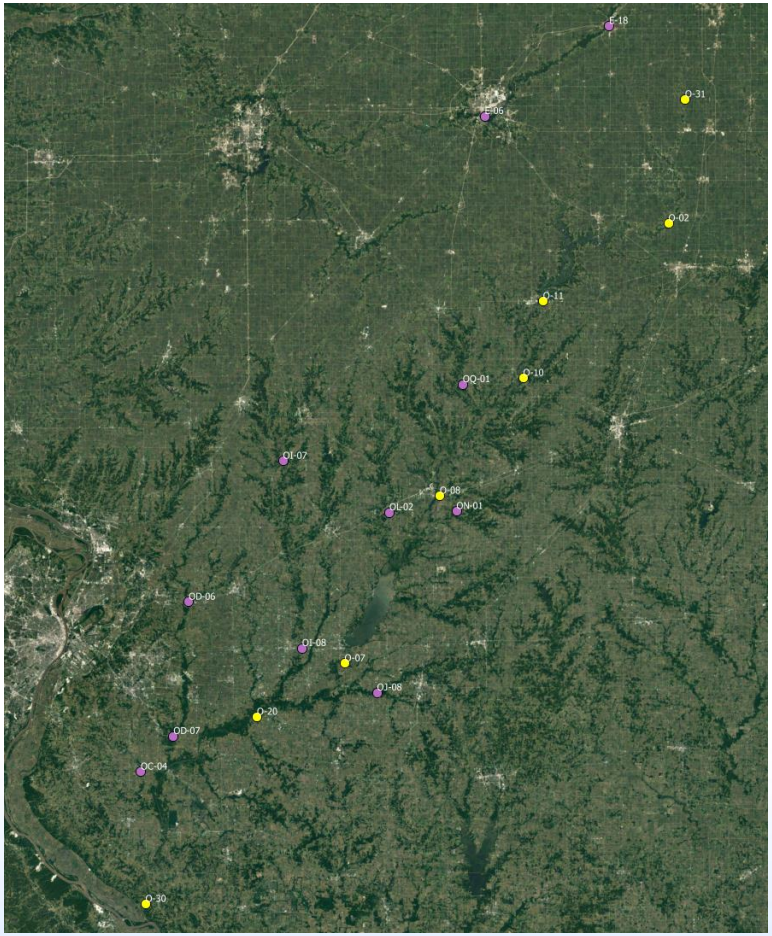
Jong Sung Lee (jonglee1@illinois.edu)
Senior Research Scientist, NCSA

Sep 13, 2016 @ 6th Nutrient Monitoring Council Meeting

National Center for Supercomputing Applications
University of Illinois at Urbana-Champaign

Data

- The requested data is acquired via STORET
  - https://ofmpub.epa.gov/storpubl/dw_pages.querycriteria
- Additional stations
  - Loaded 8 stations on Kaskaskia river
  - Same variable as before
    - Phosphorus
    - Nitrogen



Progress

- Two methods to acquire the data
  - 1. Creating a query on STORET web interface and downloading the results
  - 2. Acquiring data (results) directly via STORET web service
- We are working on #2.
- For this exercise, we used #1 method still.

Acquiring Data via Web Service

- STORET web service: SOAP
- We has developed a data fetcher to acquire data without using web interface in python.
- Limitation: maximum number of results is 20,000
- We are able to get the data in XML
  - We needs some help to understand the XML

Our Collective Goal in *Priority Watersheds*

- *"To hopefully show nutrient reduction and water quality progress through monitoring."*
  - N and P reduction in NLRS Priority Watersheds or Sub-Watersheds (Charge 1b)
  - Loading Trends Over Time (Charge 1c)
  - Local Water Quality Outcomes (Charge 2)
- Want to ultimately develop ***Watershed Nutrient Monitoring Plans*** in all priority watersheds, *but where do we start*?

Discussion: Where do we go from here?

- If needed, refine the WQ and Biological data parameters documents, then combine into one.
- Pick a pilot watershed, meet with WQ and Biology partners, ID current programs and likely continuance.
- Develop a template for development of a ***Watershed Nutrient Monitoring Plan.***

- Develop the plan.
  - Um, do we, the NMC, develop the plan?
  - Do we contract development of the plan out to someone, and we, the NMC, provide review and approval/blessing?
  - If contracted out, any idea what one might cost?
  - Potential funding sources (e.g., CWA Section 106)?

- Implement the plan.

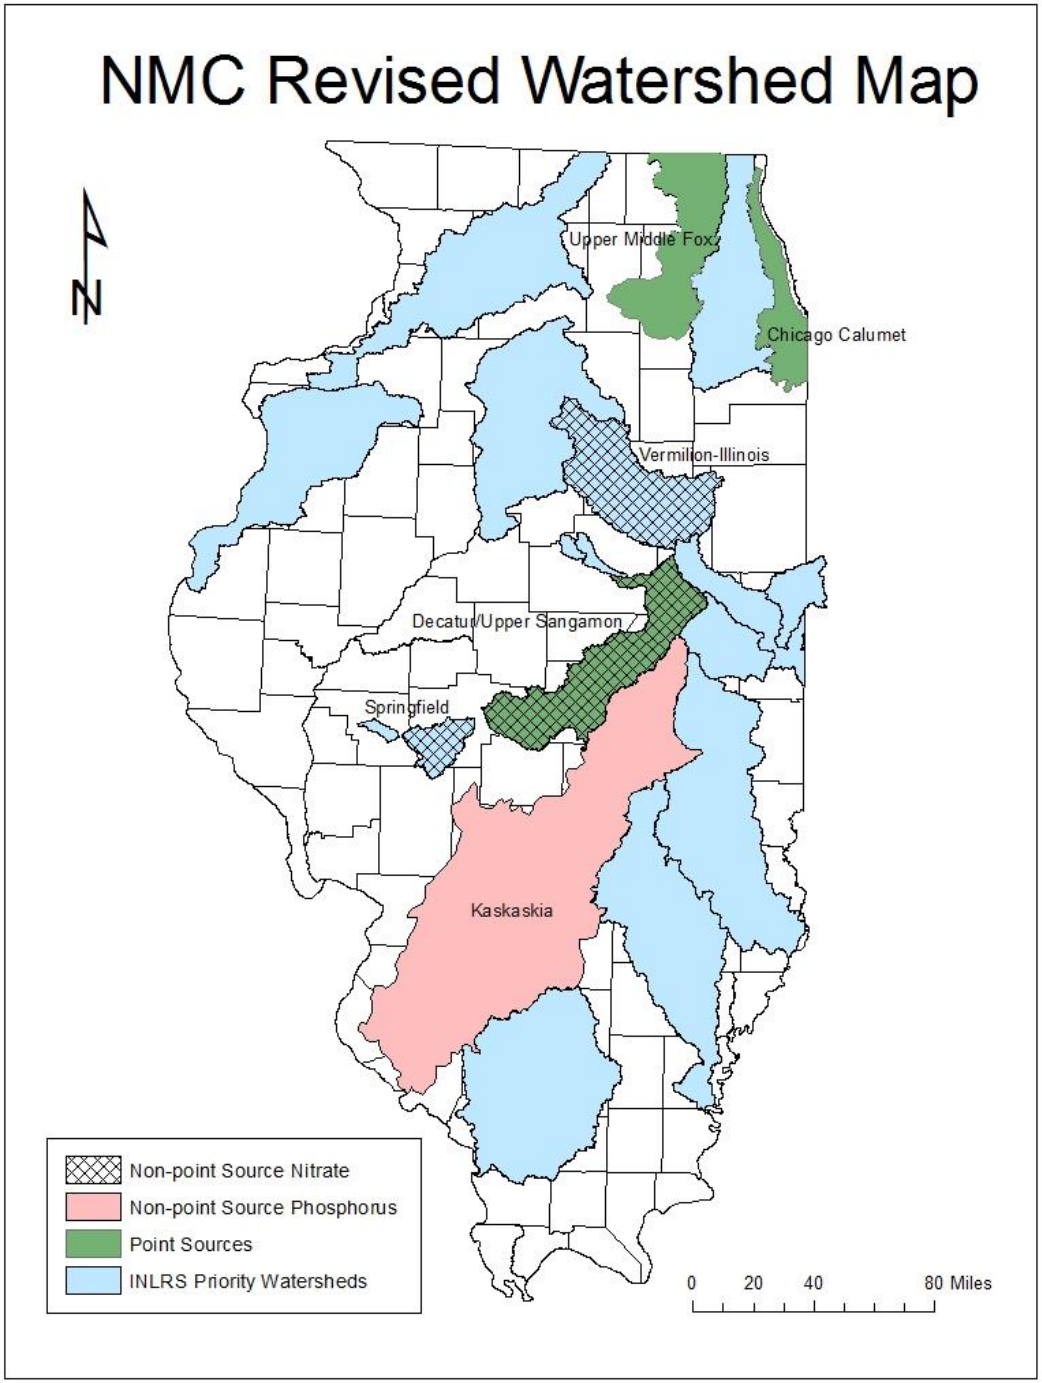
Today's Exercise – Brainstorm the Development of a *Watershed Nutrient Monitoring Plan* "Template"

TABLE OF CONTENTS

Examples of Template Elements

- Executive Summary
- Introduction
- Goals/Objectives
  - N & P Load Estimation
  - Trends in Loads Over Time
  - Resource Quality Outcomes
- Public Participation
- Study Area Description
- Historic/Existing Monitoring and Baseline Data
- Needed Additional Monitoring
- Monitoring Design
- Implementation
- Data Management
- Quality Assurance/Control
- Assessment and Evaluation Methodologies
- Results and Reporting
- Monitoring Entities
- Monitoring Costs
- Potential Funding/In-Kind
- Milestones/Timelines
- Limitations/Constraints
- Next Steps
- Appendices
- Other_____

Watersheds selected at April 5, 2016, Nutrient Monitoring Council meeting as places to start with the development of ***Watershed Nutrient Monitoring Plans.***



Pick a Pilot Watershed to Start in!

July 28, 2016, NMC Meeting ideas:

- Upper Middle Fox
- Chicago/Calumet
- Kaskaskia
- Lake Springfield

“Next Steps” Summary
(NMC September 13, 2016)

- Summarize today’s action items
  - A.
  - B.
  - C.
- Future topics for the December 6, 2016 meeting?
- Other (TBD)

Next NMC Meetings

- December 6, 2016
- *March 14, 2017?*
- *June 6, 2017?*
- *September 12, 2017?*
- *December 5, 2017?*
