Tentative Conclusions and Next Steps

February 27, 2018
Urbana

TENTATIVE CONCLUSIONS

For NSAC's purposes, wadeable streams will likely be defined as first through fourth order. This is based on Classification and Regression Tree (CART) Analysis using sites in the IEPA database.

NSAC determined the approach for identifying numeric TP and TN criteria for wadeable streams. Work continued on developing the combined criteria approach for wadeable streams.

NEXT STEPS

- Candice will follow up with US EPA on specific questions related to combined criteria.
- Candice will contact Tetra Tech to determine time line for final set of analyses.

Next Call/Meeting

- Call Tuesday March 6, 10-11am central
- Call Wednesday March 21, 10-11am central
- Next face to face meeting TBD
