Subject: [External] public comment Middle Sangamon River Watershed TMDL plan

Hi Abel,

Below are my comments for input toward the Middle Sangamon River Watershed TMDL Plan (Stage 3).

Between the segments E-06 and E-05 (including E-09) identified in the draft plan, we have witnessed severe streambank erosion over the past number of years. The erosion is beyond normal that would typically occur. It is due largely from heavy releases from Lake Decatur Dam upstream after heavy rainfall. This is loading large amounts of sediment in the water. Trees that normally hold the soil in the river bank are being undercut and fall in the river leaving the bank even more exposed to erode. Attached to this email comment is a picture taken at Segment E-09 illustrating what is happening along the River's corridor.

Riparian habitat along these segments is being compromised. Section 9 of the draft plan cites the importance of preserving this habitat for its filtering ability and root vegetation to hold soil as well as reducing solar radiation in the river. These segments should include Best Management Practices using stone toe protection and rock riffles to slow down the energy of the river's water.

Section 9 of the draft plan identifies the Long Point Slough and Buckhart Creek sections for need to control sedimentation and siltation. Segments E-05, E-06 and E-09 need to be included as well.

Subject: [External] IEPA Public Notice for TMDLs on Sangamon River

I am writing in regards to our Vulcan Construction Materials Rochester Sand & Gravel Plant that received a public notice in regards to your Sangamon River Watershed meeting for Fecal Coliform and sedimentation/siltation TMDLs. I have a couple of questions for you regarding the Draft Stage 3 TMDL Report:

1. We are listed within Section E-16 for Fecal Coliform, not any of the sections for sedimentation/siltation. Will we be required to follow any BMPs for sedimentation/siltation?
If applicable, Fecal Coliform WLA will be assigned for NPDES Permits that have Fecal Coliform effluent limits in their permits.
The BMPs for sedimentation/siltation are intended to address agricultural and urban stormwater runoff related to nonpoint source pollution.
2. We are listed as **individual** permit number IL0069060 in your reports. We are not covered under that individual permit anymore. We are covered under a General Mining Permit ILG840188. We do not have any potential for generating fecal coliform. Will we be required to follow any BMPs for this?
We will correct the NPDES Permit number.
3. Is this entire public meeting in regards to Load Reduction Strategies and BMPs? Essentially, there won't be any new limits placed in permits correct?
The purpose of the public meeting is to inform the general public, Permittees, and stakeholders about the TMDL development process, the WLA implications (if applicable), and the Load Allocation and Load Reduction Strategy that may be addressed through BMPs.
4. My understanding, therefore, from reading your Draft Stage 3 report is that these Load Reduction Strategies will not affect Vulcan because we are not in the area of the Sangamon affected by TSS and sediment impairments. Am I reading this correctly?
That is correct, LRS is a voluntary measures as discussed above.

I don't plan on attending the meeting unless your office plans to be discussing topics significantly different than the Tier 3 Draft Report.

The public meeting will only focus on the Draft Stage 3 TMDL Report as posted on the Agency website.

Thank you -

Rebekah Schulenberg

Responsiveness Summary

Responsiveness Summary

Middle Sangamon River Watershed

Total Maximum Daily Load

The responsiveness summary responds to questions and comments received during the public comment period from September 27, 2017, through October 27, 2017.

What is a TMDL?

A Total Maximum Daily Load (TMDL) is the sum of the allowable amount of a pollutant that a water body can receive from all contributing sources and still meet water quality standards or designated uses. **The Middle Sangamon River Watershed** TMDL report contains a plan detailing the actions necessary to reduce pollutant loads to the impaired water bodies and ensure compliance with applicable water quality standards. The Illinois EPA implements the TMDL program in accordance with Section 303(d) of the federal Clean Water Act and regulations thereunder.

Background

The watershed targeted for TMDL development is **Middle Sangamon River Watershed** located in central Illinois, flows in a westerly direction, and drains approximately 328,000 acres. A total of 150,085 acres (46 percent of the total watershed) lie in Macon County, 95,405 acres (29 percent of the total watershed) lie in northern Christian County, 82,111 acres (25 percent of the total watershed) lie in eastern Sangamon County, and 709 acres (0.2 percent of the total watershed) lie in southern Logan County.

The Clean Water Act and USEPA regulations require that states develop TMDLs for waters on the Section 303(d) List. Illinois EPA is currently developing TMDLs for pollutants that have numeric water quality standards. Therefore, Fecal Coliform TMDL was developed for Sangamon River (waterbody segments – E-05, E-06, E-09, and E-16) listed as impaired for primary contact and recreation per the *Draft Illinois Integrated Water Quality Report and Section 303(d) List-2016*.

In addition, a Load Reduction Strategy (LRS) was developed for pollutant(s) that do not have numeric water quality standard. These include Sedimentation/Siltation for Long Point Slough (waterbody segment - ERA-01) and Buckart Creek (waterbody segment – EZM -02).

Illinois EPA contracted with CDM Smith (TMDL Consultant) to prepare the TMDL report for Middle Sangamon River Watershed TMDL project.

Public Meetings

The draft Stage One public meeting was held on September 11, 2014 (6:00 pm) at Richland Community College, Decatur, Illinois, and the draft Stage 3 public meeting was held on September 27, 2017 at the same location. Illinois EPA provided public notice for both meetings by placing display-ad in the Decatur-Herald & Review (the local newspaper). In addition, a direct mailing was sent to several stakeholders/Permittees in the watershed. The notice gave the date, time, location, and purpose of the meeting. The notice also provided references on how to obtain additional information about this specific site, the TMDL program, and other related information. The draft TMDL report was available for review at the City of Decatur Public Library and Harristown Village Hall, and on the Agency's webpage: www.epa.illinois.gov/public-notices/index.

The Stage 3 public meeting started at 6:00 p.m. on Wednesday, September 27, 2017. It was attended by approximately 10 people and concluded at 8:00 p.m., with the meeting record remaining open until midnight, October 27, 2017.

Questions & Comments

1. Between the segments E-06 and E-05 (including E-09) identified in the draft plan, we have witnessed severe streambank erosion over the past number of years. The erosion is beyond normal that would typically occur. It is due largely from heavy releases from Lake Decatur Dam upstream after heavy rainfall. This is loading large amounts of sediment in the water. Trees that normally hold the soil in the river bank are being undercut and fall in the river leaving the bank even more exposed to erode. Attached to this email comment is a picture taken at Segment E-09 illustrating what is happening along the River's corridor.

RESPONSE: This information has been added to Section 9.4 (page 9-8).

2. Riparian habitat along these segments is being compromised. Section 9 of the draft plan cite the importance of preserving this habitat for its filtering ability and root vegetation to hold soil as well as reducing solar radiation in the river. These segments should include Best Management Practices using stone toe protection and rock riffles to slow down the energy of the river's water.

RESPONSE: Pages 9-12 and -13 contains information on streambank stabilization/erosion control measures including stone toe protection, rock riffle grade control, rock chutes, and floodplain excavation.

3. Section 9 of the draft plan identifies the Long Point Slough and Buckhart Creek sections for need to control sedimentation and siltation. Segments E-05, E-06 and E-09 need to be included as well.

RESPONSE: Although these segments are not on the 303(d) list for TSS or sedimentation, text has been added to Section 9 to highlight stakeholder

observations and to suggest that sedimentation and siltation control measures are applicable to the Middle Sangamon segments as well.

4. We are listed within Section E-16 for Fecal Coliform, not any of the sections for sedimentation/siltation. Will we be required to follow any BMPs for sedimentation/siltation?

RESPONSE: Fecal Coliform WLA will be assigned for NPDES Permits that have been identified as dischargers to Fecal Coliform impaired streams as part of the TMDL WLA load capacity analysis.

The BMPs for sedimentation/siltation are intended to address agricultural and urban stormwater runoff related to nonpoint source pollution.

5. We are listed as individual permit number IL0069060 in your reports. We are not covered under that individual permit anymore. We are covered under a General Mining Permit ILG840188. We do not have any potential for generating fecal coliform. Will we be required to follow any BMPs for this?

RESPONSE: The NPDES Permit number has been corrected in the Final Draft TMDL report. A fecal coliform WLA has not been assigned to this facility and there are no BMP requirements.

6. Is this entire public meeting in regard to Load Reduction Strategies and BMPs? Essentially, there won't be any new limits placed in permits correct?

RESPONSE: The purpose of the public meeting is to inform the public, Permittees, and stakeholders about the TMDL development process, the WLA implications for NPDES Permits, the Load Allocation, and Load Reduction Strategy that may be addressed through BMPs. Where applicable a WLA has been assigned to point source dischargers as discussed in the report.

7. From reading the Draft Stage 3 report, is that these Load Reduction Strategies will not affect Vulcan because we are not in the Sangamon affected by TSS and sediment impairments. Am I reading this correctly?

RESPONSE: That is correct, LRS is a voluntary measure as discussed above and in the TMDL report.

8. I don't plan on attending the meeting unless your office plans to be discussing topics significantly different than the Tier 3 Draft Report.

RESPONSE: The focus of the public meeting is only on the Draft Stage 3 TMDL Report as posted on the Agency's website.
